

Math Overview

These math lessons have been designed to support the development of math vocabulary, practice math facts, and work through operations with games and other activities. Children in Kindergarten focus on counting, patterns, and understanding basic math concepts. The subsequent grades build upon these activities and engage children in practicing the operations: addition subtraction, multiplication, and division, as well as concepts such as mean, mode, average, great than, less than, expanded notation word problems, geometry, fractions, decimals, and percentages, and other grade level appropriate math concepts.

The games rely on die, dominoes, and decks of cards to be random number generators, and still provide a great deal of practice with the operations. These games, once taught, can be used during math practice but also as engaging activities for youth to do when homework is completed.

Each lesson begins with an objective and ends with a debrief to ensure the learning is “sticky”. For the vocabulary section you are encouraged to create Vocabulary Journals or cut a composition book in half. The vocabulary work implements well-researched methods for making vocabulary real to youth

State the objective

Today we are going to practice the different aspects of the math lesson plan.

Gain prior knowledge by asking students the following questions

- What are some of the games that you know how to play?
- What are some of the math vocabulary words that you know?
- What do you think is meant by "Problem of the Day"?

Content (the "Meat")

Problem of the Day

In this segment you will have a problem to work through with the students. You will want to draw a picture of the problem so they can see that the words are connected to the numbers which represent the story.

You have 4 squares and 3 triangles. How many shapes do you have altogether?

Math Facts

The Fact Practice activity will be the same every day for 1st graders and Kindergartners. You may use dice, dominoes, cards, white board, or other items to practice the math facts that are appropriate for the grade level students are in.

Fact Practice

Kindergarten--Counting

During the month you will work with Kindergartners to reinforce the number sense of corresponding the numbers said with an actual number of objects. To help them do that you will create number book. After working with the Kindergartners, if they can verbally count from 11-20, then make the book that counts from 11-20. If they struggle counting to 20, help them to learn those numbers by helping them with this book. You can always do more than one page of and single number if you need more time to reinforce counting.

For the next 10 days work together to create a page together so the Kindergartners will understand how to do this on their own. Use dice or cards to determine the number you will be making out of object. Create large pages out of butcher paper.

First Grade—Fact Families (They will have different fact families each day)

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ". You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 2, 8 and 10. Have students write the entire Fact Family on the white board.

$$2 + 8 = 10$$

$$8 + 2 = 10$$

$$10 - 2 = 8$$

$$10 - 8 = 2$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 2, 8 and 10.

Math Vocabulary

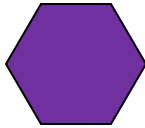

Each lesson will also have a vocabulary word that is appropriate for the grade level. The word may be reviewed more than one time. Youth need to complete the vocabulary entry in an Academic Vocabulary Notebook. The Vocabulary section will follow this pattern. We will practice working on this for the next 11 days.

Word for Today: hexagon

Description: A 6-sided flat shape.

Complete the journal entry in your Vocabulary Notebook. In space 1, write the word. In space 2, explain the word in your own words. In space 3 use the word in a sentence. In space 4 demonstrate your understanding of the word by drawing a picture of the word.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">hexagon</p>	<p>My Description</p> <p style="text-align: center;">A flat shape that has 6 sides and 6 angles</p>
<p>Personal Connection</p> <p style="text-align: center;">What is shaped like a hexagon?</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book. It is important to review academic math vocabulary often throughout the day.

Consult 4 Kids Lesson Plans

Math Activity

Each day students will have the opportunity to play different games to practice the skills that they need to work on. For the next several days you will want to help children practice different games. Here is how to introduce games to them and then an opportunity for them to practice different games and activities.

Student Practice

Step 1: Basic Information

- Tell the students the name of the game.
- Tell them the skill that they will be practicing.
- Tell them the materials they will need to play the game.
- Tell them how many people may play the game at one time.
- Tell them if the game is cooperative (all students working together to defeat the game) or competitive (each student hopes to defeat the other players).
- Tell them how they will know that the game is over.
- Remind them of how to choose who will be first.
- Remind them at the end of the game that they will need to do to clean-up.

Step 2: Demonstration

- Talk the students through the game.
- Give the rules (it is best if they can see these).
- Give a demonstration or a "for example"
- Check for understanding by asking students to tell another student "how" to play the game from what they observed.

Step 3: Model

- Ask for 2-3 student volunteers to play a "teaching game" so the remainder of the class can see the game played from beginning to end.
- Ask other students to make a circle around the volunteers so they can see how the game is played.
- Go through the game step by step having the volunteers actually make the plays.
- Ask players to explain what they were thinking when they made a particular move.
- Ask onlookers to make observations or ask questions.
- After playing the game for several minutes, praise the first volunteers and ask for 2-3 more.
- Replay the game with the new volunteers, providing less direction but being very responsive if the players are stuck or playing the game incorrectly.
- Ask players to explain what they were thinking when they made a particular move.
- Ask onlookers to make observations or ask questions.
- Check for understanding by asking students to tell another student "how" to play the game from what they observed.

Step 4: Open Play

- Divide students into small groups (you might want to put a "volunteer" who played the game in each of these small groups)
- Have the students play a practice game (no winners or losers) **Note:** If you are playing with cards you might want to have the students display their hand of cards during Open Play.
- Check for understanding by asking students to tell another student "how" to play the game from what they experienced.

Consult 4 Kids Lesson Plans

<p>Note: This is the last “practice” for the game. The majority of students will have a full understanding of the game by this point. There will be only minor tweaks and adjustments that need to be made.</p> <p>Step 5: Play</p> <ul style="list-style-type: none"> - Have students play the game.’ - Circulate and answer questions as needed. - Debrief the game at the end asking students: <ul style="list-style-type: none"> o What skill did you practice? o What did you learn? o What about the game was enjoyable? What makes you say that? o How would you have taught the game differently? 	
<p>Game for the Day</p>	<p>Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.</p>
<p>Count Down!</p> <p>Materials: Deck of Cards (remove face cards and jokers)</p> <p>Players: 2-4</p> <p>Purpose of the game: Practice counting backwards from 10 to ensure the student understands the relationship between numbers, one greater, one less, etc. To win, the cards will be in four stacks with 10 on the bottom and the ace or 1 on the top.</p> <p>Directions:</p> <ol style="list-style-type: none"> 1. Shuffle the cards. 2. Make a 3 x 3 grid of cards, face up. (A grid that has 3 columns and 3 rows), 3. Place the remainder of the cards to the right of the grid. 4. Player one looks at the cards and stacks cards in backwards order, putting the smaller card on top of the larger number. 5. Player continues to stack until there are no more additional moves. 6. If player creates an entire stack 10-1, then he/she turns the stack upside down to show that it is no longer in play. 7. When Player 1 finished his/her turn, Player 2 places cards from the remaining deck to re-create the 3 x 3 grid. 8. Play then continues with Player 2 stacking the numbers. 9. Player may move a stack to another card. For example a stack of 3-2-1 could be placed on a 4. <p>Play continues until there are four stacks, 10-1.</p>	

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

Three Whats

Ask the following three what questions:

What was your key learning for the day?

What opportunities might you have to do this same thing in the "real world"?

What advice would you give to a "new" student getting ready to do this activity?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

- Tell them the skill that they will be practicing.
- Tell them the materials they will need to play the game.
- Tell them how many people may play the game at one time.
- Tell them if the game is cooperative (all students working together to defeat the game) or competitive (each student hopes to defeat the other players).
- Tell them how they will know that the game is over.
- Remind them of how to choose who will be first.
- Remind them at the end of the game that they will need to do to clean-up.

Step 2: Demonstration

- Talk the students through the game.
- Give the rules (it is best if they can see these).
- Give a demonstration or a "for example"
- Check for understanding by asking students to tell another student "how" to play the game from what they observed.

Step 3: Model

- Ask for 2-3 student volunteers to play a "teaching game" so the remainder of the class can see the game played from beginning to end.
- Ask other students to make a circle around the volunteers so they can see how the game is played.
- Go through the game step by step having the volunteers actually make the plays.
- Ask players to explain what they were thinking when they made a particular move.
- Ask onlookers to make observations or ask questions.
- After playing the game for several minutes, praise the first volunteers and ask for 2-3 more.
- Replay the game with the new volunteers, providing less direction but being very responsive if the players are stuck or playing the game incorrectly.
- Ask players to explain what they were thinking when they made a particular move.
- Ask onlookers to make observations or ask questions.
- Check for understanding by asking students to tell another student "how" to play the game from what they observed.

Consult 4 Kids Lesson Plans

Step 4: Open Play

- Divide students into small groups (you might want to put a “volunteer” who played the game in each of these small groups)
- Have the students play a practice game (no winners or losers) **Note:** If you are playing with cards you might want to have the students display their hand of cards during Open Play.
- Check for understanding by asking students to tell another student “how” to play the game from what they experienced.

Note: This is the last “practice” for the game. The majority of students will have a full understanding of the game by this point. There will be only minor tweaks and adjustments that need to be made.

Step 5: Play

- Have students play the game.
- Circulate and answer questions as needed.
- Debrief the game at the end asking students:
 - o What skill did you practice?
 - o What did you learn?
 - o What about the game was enjoyable? What makes you say that?
 - o How would you have taught the game differently?

Game for the Day

One More

Materials: Deck of Cards (remove face cards and jokers)

Players: 2-4

Purpose of the game: Practice recognizing the numbers between 1 and 10 and the number that is 1 more. **Note:** 10 can only be an answer card.

Directions:

1. Shuffle the cards.
2. Deal 5 cards to each player.
3. Player 1 asks Player 2 (3 or 4) for a card that is a number 1 more than his or her card. For example, if the player wants to play his/her 2, he/she would ask for a 3.
4. If Player 2 has the card asked for, he/she gives it to Player 1. Player 1 then lays down his/her card and says, “___ (the card asked for) is one more than ___ (the card Player 1 started with.” Example: “3 is one more than 2.”
5. If Player 2 does not have the card asked for, he/she says, “Draw A Card”, and Player 1 draws a card and adds to his/her hand.
6. Player 2 then repeats the procedure.
7. Game is over when all cards are matched or time is called.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

Three Whats

Ask the following three what questions:

What was your key learning for the day?

What opportunities might you have to do this same thing in the "real world"?

What advice would you give to a "new" student getting ready to do this activity?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

Focus:	Learning Each Math Lesson Segment

Materials:

Deck of cards with face cards and jokers removed. Share with children that the "Ace" counts as 1.
White boards or paper and pencil

Opening

State the objective

Today we are going to practice the different aspects of the math lesson plan.

Gain prior knowledge by asking students the following questions

- What are some of the games that you know how to play?
- What are some of the math vocabulary words that you know?
- What do you think is meant by "Problem of the Day"?

Content (the "Meat")

Problem of the Day

In this segment you will have a problem to work through with the students. You will want to draw a picture of the problem so they can see that the words are connected to the numbers which represent the story.

How many pennies are in a nickel? If you have that many pennies and 3 more, how many pennies do you have altogether?

Math Facts

The Fact Practice activity will be the same every day for 1st graders and Kindergartners. You may use dice, dominoes, cards, white board, or other items to practice the math facts that are appropriate for the grade level students are in.

Fact Practice

Kindergarten--Counting

During the month you will work with Kindergartners to reinforce the number sense of corresponding the numbers said with an actual number of objects. To help them do that you will create number book. After working with the Kindergartners, if they can verbally count from 11-20, then make the book that counts from 11-20. If they struggle counting to 20, help them to learn those numbers by helping them with this book. You can always do more than one page of and single number if you need more time to reinforce counting.

For the next 10 days work together to create a page together so the Kindergartners will understand how to do this on their own. Use dice or cards to determine the number you will be making out of object. Create large pages out of butcher paper.

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

First Grade—Fact Families (They will have different fact families each day)

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say,

"If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 2, 8 and 10.

Have students write the entire Fact Family on the white board.

$$2 + 8 = 10$$

$$8 + 2 = 10$$

$$10 - 2 = 8$$

$$10 - 8 = 2$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 2, 8 and 10.

Math Vocabulary

Each lesson will also have a vocabulary word that is appropriate for the grade level. The word may be reviewed more than one time. Youth need to complete the vocabulary entry in an Academic Vocabulary Notebook. The Vocabulary section will follow this pattern. We will practice working on this for the next 11 days.

Word for Today: pattern

Description: A group that is organized in such a way that you know what comes next.

Complete the journal entry in your Vocabulary Notebook. In space 1, write the word. In space 2, explain the word in your own words. In space 3 use the word in a sentence. In space 4 demonstrate your understanding of the word by drawing a picture of the word.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">pattern</p>	<p>My Description</p> <p style="text-align: center;">An order of different shapes or number sequences</p>
<p>Personal Connection</p>	<p>Drawing</p>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

It is important to review academic math vocabulary often throughout the day.

<p>What is the pattern on the wallpaper?</p>		
<h3>Math Activity</h3>		
<p>Each day students will have the opportunity to play different games to practice the skills that they need to work on. For the next several days you will want to help children practice different games. Here is how to introduce games to them and then an opportunity for them to practice different games and activities.</p>		
<h3>Student Practice</h3>		
<p>Step 1: Basic Information</p> <ul style="list-style-type: none"> - Tell the students the name of the game. - Tell them the skill that they will be practicing. - Tell them the materials they will need to play the game. - Tell them how many people may play the game at one time. - Tell them if the game is cooperative (all students working together to defeat the game) or competitive (each student hopes to defeat the other players). - Tell them how they will know that the game is over. - Remind them of how to choose who will be first. - Remind them at the end of the game that they will need to do to clean-up. 		
<p>Step 2: Demonstration</p> <ul style="list-style-type: none"> - Talk the students through the game. - Give the rules (it is best if they can see these). - Give a demonstration or a "for example" - Check for understanding by asking students to tell another student "how" to play the game from what they observed. 		
<p>Step 3: Model</p> <ul style="list-style-type: none"> - Ask for 2-3 student volunteers to play a "teaching game" so the remainder of the class can see the game played from beginning to end. - Ask other students to make a circle around the volunteers so they can see how the game is played. - Go through the game step by step having the volunteers actually make the plays. - Ask players to explain what they were thinking when they made a particular move. - Ask onlookers to make observations or ask questions. - After playing the game for several minutes, praise the first volunteers and ask for 2-3 more. - Replay the game with the new volunteers, providing less direction but being very responsive if the players are stuck or playing the game incorrectly. - Ask players to explain what they were thinking when they made a particular move. - Ask onlookers to make observations or ask questions. - Check for understanding by asking students to tell another student "how" to play the game from what they observed. 		

Consult 4 Kids Lesson Plans

Step 4: Open Play

- Divide students into small groups (you might want to put a “volunteer” who played the game in each of these small groups)
- Have the students play a practice game (no winners or losers) **Note:** If you are playing with cards you might want to have the students display their hand of cards during Open Play.
- Check for understanding by asking students to tell another student “how” to play the game from what they experienced.

Note: This is the last “practice” for the game. The majority of students will have a full understanding of the game by this point. There will be only minor tweaks and adjustments that need to be made.

Step 5: Play

- Have students play the game.
- Circulate and answer questions as needed.
- Debrief the game at the end asking students:
 - o What skill did you practice?
 - o What did you learn?
 - o What about the game was enjoyable? What makes you say that?
 - o How would you have taught the game differently?

Game for the Day

One More

Materials: Deck of Cards (remove face cards and jokers)

Players: 2-4

Purpose of the game: Practice recognizing the numbers between 1 and 10 and the number that is 1 more. **Note:** 10 can only be an answer card.

Directions:

1. Shuffle the cards.
2. Deal 5 cards to each player.
3. Player 1 asks Player 2 (3 or 4) for a card that is a number 1 more than his or her card. For example, if the player wants to play his/her 2, he/she would ask for a 3.
4. If Player 2 has the card asked for, he/she gives it to Player 1. Player 1 then lays down his/her card and says, “___ (the card asked for) is one more than ___ (the card Player 1 started with.” Example: “3 is one more than 2.”
5. If Player 2 does not have the card asked for, he/she says, “Draw A Card”, and Player 1 draws a card and adds to his/her hand.
6. Player 2 then repeats the procedure.
7. Game is over when all cards are matched or time is called.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Focus:	Learning Each Math Lesson Segment

Materials:

Deck of cards with face cards and jokers removed. Share with children that the "Ace" counts as 1. One deck for every two children.

White boards or paper and pencil

Opening

State the objective

Today we are going to practice the different aspects of the math lesson plan.

Gain prior knowledge by asking students the following questions

What are some of the games that you know how to play?

What are some of the math vocabulary words that you know?

What do you think is meant by "Problem of the Day"?

Content (the "Meat")

Problem of the Day

In this segment you will have a problem to work through with the students. You will want to draw a picture of the problem so they can see that the words are connected to the numbers which represent the story.

If you have 5 dimes and you spend 3 of them, how many do you have left?

Math Facts

The Fact Practice activity will be the same every day for 1st graders and Kindergartners. You may use dice, dominoes, cards, white board, or other items to practice the math facts that are appropriate for the grade level students are in.

Fact Practice

Kindergarten--Counting

During the month you will work with Kindergartners to reinforce the number sense of corresponding the numbers said with an actual number of objects. To help them do that you will create number book. After working with the Kindergartners, if they can verbally count from 11-20, then make the book that counts from 11-20. If they struggle counting to 20, help them to learn those numbers by helping them with this book. You can always do more than one page of and single number if you need more time to reinforce counting.

For the next 10 days work together to create a page together so the Kindergartners will understand how to do this on their own. Use dice or cards to determine the number you will be making out of object. Create large pages out of butcher paper.

First Grade—Fact Families (They will have different fact families each day)

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$\begin{aligned} 1 + 2 &= 3 \\ 2 + 1 &= 3 \\ 3 - 2 &= 1 \\ 3 - 1 &= 2 \end{aligned}$$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ". You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 2, 8 and 10. Have students write the entire Fact Family on the white board.

$$\begin{aligned} 2 + 8 &= 10 \\ 8 + 2 &= 10 \\ 10 - 2 &= 8 \\ 10 - 8 &= 2 \end{aligned}$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 2, 8 and 10.

Math Vocabulary

Each lesson will also have a vocabulary word that is appropriate for the grade level. The word may be reviewed more than one time. Youth need to complete the vocabulary entry in an Academic Vocabulary Notebook. The Vocabulary section will follow this pattern. We will practice working on this for the next 11 days.

Word for Today: subtraction

Description: Reducing a total by a specific amount and then finding the difference between what you started with and what you have after removing some items.

Complete the journal entry in your Vocabulary Notebook. In space 1, write the word. In space 2, explain the word in your own words. In space 3 use the word in a sentence. In space 4 demonstrate your understanding of the word by drawing a picture of the word.

Vocabulary Notebook Sample

<p>New Word</p> <p style="text-align: center;">Subtraction</p>	<p>My Description</p> <p style="text-align: center;">Reducing a total number and finding the difference</p>
<p>Personal Connection</p> <p>Do you know how to do subtraction problems?</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

It is important to review academic math vocabulary often throughout the day.

Consult 4 Kids Lesson Plans

Math Activity

Each day students will have the opportunity to play different games to practice the skills that they need to work on. For the next several days you will want to help children practice different games. Here is how to introduce games to them and then an opportunity for them to practice different games and activities.

Student Practice

Step 1: Basic Information

- Tell the students the name of the game.
- Tell them the skill that they will be practicing.
- Tell them the materials they will need to play the game.
- Tell them how many people may play the game at one time.
- Tell them if the game is cooperative (all students working together to defeat the game) or competitive (each student hopes to defeat the other players).
- Tell them how they will know that the game is over.
- Remind them of how to choose who will be first.
- Remind them at the end of the game that they will need to do to clean-up.

Step 2: Demonstration

- Talk the students through the game.
- Give the rules (it is best if they can see these).
- Give a demonstration or a "for example"
- Check for understanding by asking students to tell another student "how" to play the game from what they observed.

Step 3: Model

- Ask for 2-3 student volunteers to play a "teaching game" so the remainder of the class can see the game played from beginning to end.
- Ask other students to make a circle around the volunteers so they can see how the game is played.
- Go through the game step by step having the volunteers actually make the plays.
- Ask players to explain what they were thinking when they made a particular move.
- Ask onlookers to make observations or ask questions.
- After playing the game for several minutes, praise the first volunteers and ask for 2-3 more.
- Replay the game with the new volunteers, providing less direction but being very responsive if the players are stuck or playing the game incorrectly.
- Ask players to explain what they were thinking when they made a particular move.
- Ask onlookers to make observations or ask questions.
- Check for understanding by asking students to tell another student "how" to play the game from what they observed.

Step 4: Open Play

- Divide students into small groups (you might want to put a "volunteer" who played the game in each of these small groups)
- Have the students play a practice game (no winners or losers) **Note:** If you are

Consult 4 Kids Lesson Plans

<p>playing with cards you might want to have the students display their hand of cards during Open Play.</p> <ul style="list-style-type: none"> - Check for understanding by asking students to tell another student “how” to play the game from what they experienced. <p>Note: This is the last “practice” for the game. The majority of students will have a full understanding of the game by this point. First Grade—Fact Families (They will have different fact families each day)

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say,

"If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 2, 8 and 10.

Have students write the entire Fact Family on the white board.

$$2 + 8 = 10$$

$$8 + 2 = 10$$

$$10 - 2 = 8$$

$$10 - 8 = 2$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 2, 8 and 10.

Math Vocabulary

Each lesson will also have a vocabulary word that is appropriate for the grade level.

The word may be reviewed more than one time. Youth need to complete the vocabulary entry in an Academic Vocabulary Notebook. The Vocabulary section will follow this pattern. We will practice working on this for the next 11 days.

Word for Today: operations

Description: The word operation refers to a mathematical process. The four most common are addition, subtraction, multiplication, and division that are represented with these symbols: +, -, X, and ÷.

Complete the journal entry in your Vocabulary Notebook. In space 1, write the word. In space 2, explain the word in your own words. In space 3 use the word in a sentence. In space 4 demonstrate your understanding of the word by drawing a picture of the word.

Vocabulary Notebook Sample:

New Word	My Description

It is important to review academic math vocabulary often throughout the day.

Math Activity Each day students will have the opportunity to play different games to practice the skills that they need to work on. For the next several days you will want to help children practice different games. Here is how to introduce games to them and then an opportunity for them to practice different games and activities.		
Student Practice		
Step 1: Basic Information <ul style="list-style-type: none"> - Tell the students the name of the game. - Tell them the skill that they will be practicing. - Tell them the materials they will need to play the game. - Tell them how many people may play the game at one time. - Tell them if the game is cooperative (all students working together to defeat the game) or competitive (each student hopes to defeat the other players). - Tell them how they will know that the game is over. - Remind them of how to choose who will be first. - Remind them at the end of the game that they will need to do to clean-up. 		
Step 2: Demonstration <ul style="list-style-type: none"> - Talk the students through the game. - Give the rules (it is best if they can see these). - Give a demonstration or a "for example" - Check for understanding by asking students to tell another student "how" to play the game from what they observed. 		
Step 3: Model <ul style="list-style-type: none"> - Ask for 2-3 student volunteers to play a "teaching game" so the remainder of the class can see the game played from beginning to end. - Ask other students to make a circle around the volunteers so they can see how the game is played. - Go through the game step by step having the volunteers actually make the plays. - Ask players to explain what they were thinking when they made a particular move. - Ask onlookers to make observations or ask questions. - After playing the game for several minutes, praise the first volunteers and ask for 2-3 more. - Replay the game with the new volunteers, providing less direction but being very responsive if the players are stuck or playing the game incorrectly. 		

Consult 4 Kids Lesson Plans

- Ask players to explain what they were thinking when they made a particular move.
- Ask onlookers to make observations or ask questions.
- Check for understanding by asking students to tell another student "how" to play the game from what they observed.

Step 4: Open Play

- Divide students into small groups (you might want to put a "volunteer" who played the game in each of these small groups)
- Have the students play a practice game (no winners or losers) **Note:** If you are playing with cards you might want to have the students display their hand of cards during Open Play.
- Check for understanding by asking students to tell another student "how" to play the game from what they experienced.

Note: This is the last "practice" for the game. The majority of students will have a full understanding of the game by this point. There will be only minor tweaks and adjustments that need to be made.

Step 5: Play

- Have students play the game.'
- Circulate and answer questions as needed.
- Debrief the game at the end asking students:
 - o What skill did you practice?
 - o What did you learn?
 - o What about the game was enjoyable? What makes you say that?
 - o How would you have taught the game differently?

Game for the Day

Just the Facts

Players: 2-3

Directions:

1. Dominoes are placed in the center of the table, face down.
2. After deciding who will go first, Player 1 draws a domino, turns it face up and places it down in front of him/her.
3. Kindergarten: Play 1 counts the pips on the dominoes and tells how many are on the domino
1st Grade: Player 1 totals the pips on the domino by saying (e.g. 2 + 4 = 6). If the answer is correct, then player keeps the domino and play moves on to player 2.
4. If player does not say the correct total or sum, then the domino is returned to the pile
5. Play continues until all dominoes are taken.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

First Grade—Fact Families (They will have different fact families each day)

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 2, 8 and 10.

Have students write the entire Fact Family on the white board.

$$2 + 8 = 10$$

$$8 + 2 = 10$$

$$10 - 2 = 8$$

$$10 - 8 = 2$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 2, 8 and 10.

Math Vocabulary

Each lesson will also have a vocabulary word that is appropriate for the grade level. The word may be reviewed more than one time. Work with the children to create a Vocabulary entry on paper as a class (as 1st grader mature they can do their own journals). The Vocabulary section will follow this pattern. We will practice working on this for the next 11 days.

Word for Today: math

Description: Math is the word we use that is short for mathematics. Math is the study of numbers, patterns, space, and change. In math we learn about operations, geometry, data and statistics, algebra, and mathematical reasoning.

Complete the journal entry in your Vocabulary Notebook. In space 1, write the word. In space 2, explain the word in your own words. In space 3 use the word in a sentence. In space 4 demonstrate your understanding of the word by drawing a picture of the word.

Vocabulary Notebook Sample:

Three Whats

Ask the following three what questions:

What was your key learning for the day?

What opportunities might you have to do this same thing in the "real world"?

What advice would you give to a "new" student getting ready to do this activity?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

White boards or paper and pencil

Opening

State the objective

Today we are going to practice the different aspects of the math lesson plan.

Gain prior knowledge by asking students the following questions

What are some of the games that you know how to play?

What are some of the math vocabulary words that you know?

What do you think is meant by “Problem of the Day”?

Content (the “Meat”)

Problem of the Day

In this segment you will have a problem to work through with the students. You will want to draw a picture of the problem so they can see that the words are connected to the numbers which represent the story.

If you have 9 apple pieces and you eat 3 of them, how many do you have left?

Math Facts

The Fact Practice activity will be the same every day for 1st graders and Kindergartners. You may use dice, dominoes, cards, white board, or other items to practice the math facts that are appropriate for the grade level students are in.

Fact Practice

Kindergarten--Counting

During the month you will work with Kindergartners to reinforce the number sense of corresponding the numbers said with an actual number of objects. To help them do that you will create number book. After working with the Kindergartners, if they can verbally count from 11-20, then make the book that counts from 11-20. If they struggle counting to 20, help them to learn those numbers by helping them with this book. You can always do more than one page of and single number if you need more time to reinforce counting.

For the next 10 days work together to create a page together so the Kindergartners will understand how to do this on their own. Use dice or cards to determine the number you will be making out of object. Create large pages out of butcher paper.

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

First Grade—Fact Families (They will have different fact families each day)

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say,

"If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 2, 8 and 10.

Have students write the entire Fact Family on the white board.

$$2 + 8 = 10$$

$$8 + 2 = 10$$

$$10 - 2 = 8$$

$$10 - 8 = 2$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 2, 8 and 10.

Math Vocabulary

Each lesson will also have a vocabulary word that is appropriate for the grade level. The word may be reviewed more than one time. Youth need to complete the vocabulary entry in an Academic Vocabulary Notebook. The Vocabulary section will follow this pattern. We will practice working on this for the next 11 days.

Word for Today: addition

Description: Combining two or more groups of things (usually representing by numerals) and finding a total.

Complete the journal entry in your Vocabulary Notebook. In space 1, write the word. In space 2, explain the word in your own words. In space 3 use the word in a sentence. In space 4 demonstrate your understanding of the word by drawing a picture of the word.

Vocabulary Notebook Sample:

New Word	My Description
addition	Combining the values of two or more things into a whole
Personal Connection	Drawing

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

It is important to review academic math vocabulary often throughout the day.

Fact Practice The Number Book

During this next 11 days you will be working with Kindergartners to develop the number sense of corresponding the numbers said with an actual number of objects. To help them do that you will create a number book. After working with the Kindergartners, if they can

Consult 4 Kids Lesson Plans

<p>verbally count to 10, then make the number book go to 10. If they struggle counting to 10, make the number book with 2 pages for each number 1-5.</p> <p>The Book</p> <p>Make the cover and the back for the book. Remember to have the book pages cut (an 8" square works nicely, glue sticks, and items for the children to select and paste. Once they have completed the book you will want to connect it with either staples or by punching a hole at the top and connecting the pages with a ring. You might want to consider making the cover out of colored card stock and then having the children decorate the front and back cover. If you pre-print the cover you can title it <u>My Counting Book</u>. Be sure that the child writes his/her name on the cover so you can send it home.</p> <p>Double check all of the pages to be sure that the number of items corresponds to the number written by the child. It is important that they see the corresponding number and symbol done correctly or we are reinforcing a misconception/error.</p>	<p>When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.</p>
<p style="text-align: center;">Math Vocabulary</p> <p>Word for Today: rectangle</p> <p>Today you will review all of the words that the children have learned:</p> <ul style="list-style-type: none"> number circle square triangle rectangle <p>Have students draw on the white board as you say the word. Ask them to share with one another what the word means.</p> <p>Make the symbols and shapes on the board and ask students to identify them for you. Work with them to answer questions in complete sentences—for example, A square has 4 sides that are all the same rather than 4 sides.</p>	<p>It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word.</p> <p>When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).</p>
<p style="text-align: center;">Activity Student Choice</p> <p>Review how to play the games One Less, One More, Count Down and Memory Match. Once you are sure that students know how to play each game, have them choose a partner and play the game that they most enjoy. This will be a good opportunity for you to be sure that these games can be placed in a center or in the "after homework is done" choice. It is important that children can play the game independently which you will know by the end of the session today. If they are not yet independent, then do not put the game out for them when you are not available to help and support the play.</p>	<p>Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.</p>

Consult 4 Kids Lesson Plans

Component:	Math
Grade Level:	First Grade
Lesson Title:	Equals One More
Focus:	Math Vocabulary, addition, subtraction, fact families

Materials:	
White boards	decks of cards with face cards and jokers removed
Crayolas	Socks

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What is a Fact Family? If you are adding the number 4 and 3 together, what is the fact family of three numbers?

What is a sum?

What is another way of telling you to add?

Write a number sentence for the Fact Family 4, 3, and 7. Circle the sum.

Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing). Sometimes you count forward or backward by 1s, other times by 2s, 3s, 4s, or many more. That's why addition and subtraction were invented so you didn't have to spend so much time counting. It is simply easier once you get the hang of it.

Content (the "Meat")

Problem of the Day

Look at the lines below. Which line is longer? How can you tell?

A

B

Have students draw this problem on the white board.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

Consult 4 Kids Lesson Plans

Purpose of the game: Practice recognizing the numbers between 1 and 10 and the number that is 1 more. **Note:** 10 can only be an answer card.

Materials: Deck of Cards (remove face cards and jokers)

Players: 2

Directions:

1. Shuffle the cards.
2. Deal 5 cards to each player.
3. Player 1 asks Player 2 (3 or 4) for a card that is a number 1 more than his or her card. For example, if the player wants to play his/her 2, he/she would ask for a 3.
4. If Player 2 has the card asked for, he/she gives it to Player 1. Player 1 then lays down his/her card and says, "___ (the card asked for) is one more than ___ (the card Player 1 started with." Example: "3 is one more than 2."
5. If Player 2 does not have the card asked for, he/she says, "Draw A Card", and Player 1 draws a card and adds to his/her hand.
6. Player 2 then repeats the procedure.
7. Game is over when all cards are matched or time is called.

Closing

Gain prior knowledge by asking students the following questions
<p>What do you know about addition?</p> <p>What is a Fact Family? If you are adding the number 2 and 3 together, what is the fact family of three numbers?</p> <p>What is a sum?</p> <p>In the Fact Family 2, 3, and 5 what is the sum?</p> <p>Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing). Sometimes you count forward or backward by 1s, other times for 2s, 3s, 4s, or many more. That's why addition and subtraction were invented so you didn't have to spend so much time counting. It is simply easier once you get the hang of it.</p>

Consult 4 Kids Lesson Plans

"If $1 + 2 = 3$, then $2 + 1 = 3$ ".
 The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".
 You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.
Today you will introduce this activity and begin with the Fact Family of 1, 3, and 4.
 Have students write the entire Fact Family on the white board.

$1 + 4 = 5$
 $4 + 1 = 5$
 $5 - 1 = 4$
 $5 - 4 = 1$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 1, 4, and 5.

student become the teacher.

Math Vocabulary

Word for Today: plus
 The word plus can be used as another way of saying add. It is representing in the symbol +. Plus means to increase or be bigger.
 Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">plus</p>	<p>My Description</p> <p style="text-align: center;">A word that means to add together</p>
<p>Personal Connection</p> <p>You can add two numbers by saying 5 plus 4. .</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day
 Complete the Vocabulary notebook for each word.
 When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation)
 Vocabulary Notebooks can be made from 1/2 of a composition book.

**Activity
One More**

Demonstrate how to play the game by bringing the children all together around a single table. Ask for children to volunteer to learn how to play the game. Begin with 2 children. Once you have taught 2, have each of them teach 1 other student while everyone is watching. Repeat one more time so that you now have 4 children teaching 4 other children. When you start to play the game, put the 8 who know how to play the game with 8 who do not and you can observe the final four play.

Purpose of the game: Practice recognizing the numbers between 1 and 10 and the

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

number that is 1 more. **Note:** 10 can only be an answer card.

Materials: Deck of Cards (remove face cards and jokers)

Players: 2

Directions:

1. Shuffle the cards.
2. Deal 5 cards to each player.
3. Player 1 asks Player 2 (3 or 4) for a card that is a number 1 more than his or her card. For example, if the player wants to play his/her 2, he/she would ask for a 3.
4. If Player 2 has the card asked for, he/she gives it to Player 1. Player 1 then lays down his/her card and says, "___ (the card asked for) is one more than ___ (the card Player 1 started with." Example: "3 is one more than 2."
5. If Player 2 does not have the card asked for, he/she says, "Draw A Card", and Player 1 draws a card and adds to his/her hand.
6. Player 2 then repeats the procedure.
7. Game is over when all cards are matched or time is called.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What would you like to do more of the next time we do math?

Read the problem aloud: $6 + 9 = 15$. $3 + 2 = 5$. Did you use the word plus?

Reflection (Confirm, Tweak, Aha!)

- Ask students to think about what they did today in math.
- Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
- Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
- Ask them to comment on something (if anything) they have learned today that was brand new to them.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What is another way of telling you to add?

What is a Fact Family? If you are adding the number 4 and 3 together, what is the fact family of three numbers?

What is a sum?

What does equals mean? How does the = sign connect the numbers of a Fact Family.

Content (the "Meat")

Problem of the Day

Look at the list of number. What are the missing numbers? Write them in. How do you know you are right?

1, 2, ____, 4, 5, 6, ____, 8, 9, 10

Have students draw this problem on the white board.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say,

"If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 1, 3, and 4.

Have students write the entire Fact Family on the white board.

$$2 + 5 = 7$$

$$5 + 2 = 7$$

$$7 - 2 = 5$$

$$7 - 5 = 2$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 2, 5, and 7.

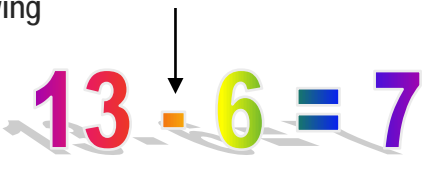

Math Vocabulary

Word for Today: minus

Minus is another word for subtract. The symbol for minus is -. It means to take away the second number from the first number. In a number sentence you could say 7 minus (-) 5 equals (=) 2

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">minus</p>	<p>My Description</p> <p style="text-align: center;">Means subtraction or taking away</p>
<p>Personal Connection</p> <p style="text-align: center;">17 minus 11 equals 6.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Up To Three

Demonstrate how to play the game by bringing the children all together around a single table. Ask for children to volunteer to learn how to play the game. Begin with 2 children. Once you have taught 2, have each of them teach 1 other student while everyone is watching. Repeat one more time so that you now have 4 children teaching 4 other children. When you start to play the game, put the 8 who know how to play the game with 8 who do not and you can observe the final four play.

Purpose of the game: Practice adding numbers to find a correct sum.

Materials: Three 6-sided dice for the game

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

<p>Players: 2</p> <p>Directions:</p> <ol style="list-style-type: none"> 1. Players create a game board by writing the number 3-18 on a piece of paper or a white board. 2. Player 1 rolls 3 dice 3. Player totals the 3 dice and crosses out the number that represents the sum 4. If the number is already crossed out, the player may roll 1, 2, or 3 dice again For example, the player may keep 1 of the dice and roll only 2 to get another total 5. Player may roll up to 3 times before he/she loses his/her turn 6. Player 2 repeats 7. Game is over when time is called or all of the numbers are crossed out.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about math?

What do you know about addition?

How old are you today? How old will you be on your next birthday? Did you simply say the next number? Did you add one to your current age? When you increase a number it is addition. How old are you today? How old were you before your last birthday? Did you simply count backwards? Did you subtract one from your current age? Subtraction is what you do when you decrease a number.

Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing)

Content (the "Meat")

Problem of the Day

Romeo the cat is wearing a glove on each of his paws. How many gloves is Romeo wearing?

Have students draw this problem on the white board.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn"

Consult 4 Kids Lesson Plans

<p>The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$”. You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p> <p>Today you will introduce this activity and begin with the Fact Family of 1, 2, and 3. Have students write the entire Fact Family on the white board.</p> <p>Bring two students up to practice the conversation.</p> <p>Try it again with several other pairs of students.</p> <p>Then have children find a partner and practice the conversation. After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".
 The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".
 You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 1, 3, and 4.

Have students write the entire Fact Family on the white board.

$$2 + 4 = 6$$

$$4 + 2 = 6$$

$$6 - 2 = 4$$

$$6 - 4 = 2$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 2, 4, and 6.

Math Vocabulary

Word for Today: difference

Difference is the word that means the answer to a subtraction problem. It is the amount that is left when you start with a particular amount and then take a certain amount away, you have the difference left.

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">difference</p>	<p>My Description</p> <p style="text-align: center;">The difference is the result of a subtraction problem</p>
<p>Personal Connection</p> <p style="text-align: center;">What is the difference between 13 and 8?</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Just the Facts

Demonstrate how to play the game by bringing the children all together around a single table. Ask for children to volunteer to learn how to play the game. Begin with 2 children. Once you have taught 2, have each of them teach 1 other student while everyone is watching. Repeat one more time so that you now have 4 children teaching 4 other children. When you start to play the game, put the 8 who know how to play the game with 8 who do

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

not and you can observe the final four play.

Purpose of the game: Practice addition facts

Materials: Double 9 Dominoes, 1 set for each group

Players: 2

Directions:

1. Dominoes are placed in the center of the table, face down.
2. After deciding who will go first, Player 1 draws a domino, turns it face up and places it down in front of him/her.
3. Player 1 totals the pips on the domino by saying (e.g. $2 + 4 = 6$). If the answer is correct, then player keeps the domino and play moves on to player 2.
4. If player does not say the correct sum, then the domino is returned to the pile
5. Play continues until all dominoes are taken.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about addition?

What is a Fact Family? If you are adding the number 2 and 3 together, what is the fact family of three numbers?

Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing).

Sometimes you count forward or backward by 1s, other times for 2s, 3s, 4s, or many more. That's why addition and subtraction were invented so you didn't have to spend so much time counting. It is simply easier once you get the hang of it.

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

Give an example of a subtraction problem.

Why is the difference lower than the first number in a subtraction problem?

In a Fact Family how does the arrangement of the numbers change when you subtract?

What does equals mean? How does the = sign connect the numbers of a Fact Family in a subtraction problem..

Content (the "Meat")

Problem of the Day

Write the number that comes before 39. Write the number that comes after 39. How do you know you are right?

Have students draw this problem on the white board.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say,

"If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

<p>response.</p> <p>Today you will introduce this activity and begin with the Fact Family of 4, 4, and 8. Have students write the entire Fact Family on the white board.</p> <p style="margin-left: 20px;"> $4 + 4 = 8$ $4 + 4 = 8$ $8 - 4 = 4$ $8 - 4 = 4$ </p> <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 4, 4, and 8.</p>					
<p style="text-align: center;">Math Vocabulary</p> <p>Word for today: 10s</p> <p>Review yesterday's conversation with the children. Talk about how we write numbers when we count by 10s. Ask children to count by 10s to 100. As they say each number, write the number on the board. Children should show ten fingers and then close hands into fists and then show ten fingers again when they say the next number. After counting to 100 by tens, show children that the math problem looks like $10 + 10 = 20$, $10 + 10 + 10 = 30$ and so on.</p> <p>Have children review the vocabulary entry from yesterday and make any additions or adjustments as needed for today.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse; margin-top: 10px;"> <tr> <td style="width: 35%; padding: 5px; vertical-align: top;"> <p>New Word</p> <p style="text-align: center;">tens</p> </td> <td style="width: 65%; padding: 5px; vertical-align: top;"> <p>My Description</p> <p style="text-align: center;">Counting numbers that are 10 apart, like 9, 19, 29, 39, and so on</p> </td> </tr> <tr> <td style="padding: 5px; vertical-align: top;"> <p>Personal Connection</p> <p style="text-align: center;">I can count by 10s to 500.</p> </td> <td style="padding: 5px; vertical-align: top;"> <p>Drawing</p> <p style="text-align: center;"></p> </td> </tr> </table>	<p>New Word</p> <p style="text-align: center;">tens</p>	<p>My Description</p> <p style="text-align: center;">Counting numbers that are 10 apart, like 9, 19, 29, 39, and so on</p>	<p>Personal Connection</p> <p style="text-align: center;">I can count by 10s to 500.</p>	<p>Drawing</p> <p style="text-align: center;"></p>	<p>It is important to review academic math vocabulary often throughout the day.</p> <p>Complete the Vocabulary notebook for each word.</p> <p>When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).</p> <p>Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.</p>

correct response.

Today you will introduce this activity and begin with the Fact Family of 3, 9 and 12

Have students write the entire Fact Family on the white board.

$$3 + 9 = 12$$

$$9 + 3 = 12$$

$$12 - 3 = 9$$

$$12 - 9 = 3$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 3, 9 and 12.

Math Vocabulary

Word for Today: tens

Tens is the word we use to describe the place that a numeral can be that represents counting by 10s. While ones is in the place furthest to the right, the 10s place is next to it on the left. The number 10 means 1 ten and no ones. When we get to 10 it is like we bundled the items together and instead of having to count again and again, we can simply look at the bundle and know that it is 10. Just like a dime is 10 pennies collected into one coin, a 10s bundle is 10 items collected into one item—usually with a rubber band or some other way to separate the group of ten from everything else. Ask children to share different ways that you could bundle 10 together (baggie, paper clip, rubber band, envelope, etc.)

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">tens</p>	<p>My Description</p> <p style="text-align: center;">Number that are separated by 10, also the tens place to create larger numbers</p>
<p>Personal Connection</p> <p style="text-align: center;">Now that I am 10, I have a numeral in the tens place.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

Activity Roll and Compare

Demonstrate how to play the game by bringing the children all together around a single table. Ask for children to volunteer to learn how to play the game. Begin with 2 children. Once you have taught 2, have each of them teach 1 other student while everyone is watching. Repeat one more time so that you now have 4 children teaching 4 other children. When you start to play the game, put the 8 who know how to play the game with 8 who do not and you can observe the final four play.

Materials: Two 6-sided dice for each player
 Game Board
 Game Tokens
 Comparison Cards Deck #2 (<, >, =, and between)

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

Vis-à-vis pens

Players: 2-4

Purpose of the game: Practice determining if numbers are greater than, less than, between, or equal to another number.

Directions:

1. Players prepare their own Roll and Compare game board. (There are 25 squares on the board. Players should write the numbers 0-15 in the boxes, one number per box. Player may use a number more than one time.)
2. Player 1 draws a comparison card and calls out the comparison
3. Player 1 then rolls 2 dice and tells the other players the numbers represented on the dice
4. Players select a number on their board that meets the criteria determined by the comparison die and place a game marker over the number
5. Procedure continues with Player 2 leading and rolling
6. Game is over when 1 or more people have covered 5 in a row, column, or diagonal. See sample board:

<p> $3 + 7 = 10$ $7 + 3 = 10$ $10 - 3 = 7$ $10 - 7 = 3$ </p> <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 3, 7 and 10.</p>					
<p style="text-align: center;">Math Vocabulary</p> <p>Word for Today: count</p> <p>Count is a word that describes what we do to find out how many. We can count by ones saying 1, 2, 3, 4, 5, and so on. Sometimes we count by 5s, saying 5, 10, 15, 20, 25. When we count by 5s, we have to move 5 items over at one time and then say 5. When we count by ones, we count one item at a time. You can count forward and you can count backward. When you count forward the number gets larger, when you count backward, the next number you say is smaller than the one before.</p> <p>Have children complete the Vocabulary notebook.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse; margin-top: 10px;"> <tr> <td style="width: 35%; padding: 5px;"> <p>New Word</p> <p style="text-align: center;">count</p> </td> <td style="width: 65%; padding: 5px;"> <p>My Description</p> <p style="text-align: center;">Identify the amount of things that you have</p> </td> </tr> <tr> <td style="padding: 5px;"> <p>Personal Connection</p> <p style="text-align: center;">I can count to 500.</p> </td> <td style="padding: 5px;"> <p>Drawing</p> <div style="text-align: center; margin-top: 10px;">  </div> </td> </tr> </table>	<p>New Word</p> <p style="text-align: center;">count</p>	<p>My Description</p> <p style="text-align: center;">Identify the amount of things that you have</p>	<p>Personal Connection</p> <p style="text-align: center;">I can count to 500.</p>	<p>Drawing</p> <div style="text-align: center; margin-top: 10px;">  </div>	<p>It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word. (Ex. 4 students creating a right angle, multiple students acting out an equation.)</p> <p>Vocabulary Notebooks can be made from 1/2 of a composition book.</p>
<p>New Word</p> <p style="text-align: center;">count</p>	<p>My Description</p> <p style="text-align: center;">Identify the amount of things that you have</p>				
<p>Personal Connection</p> <p style="text-align: center;">I can count to 500.</p>	<p>Drawing</p> <div style="text-align: center; margin-top: 10px;">  </div>				
<p style="text-align: center;">Activity</p> <p style="text-align: center;">Beat the Dice</p> <p>Demonstrate how to play the game by bringing the children all together around a single table. (Note: you played this game last month so children may remember how to play the game after a quick review). Ask for children to volunteer to learn how to play the game. Begin with 2 children. Once you have taught 2, have each of them teach 1 other student while everyone is watching. Repeat one more time so that you now have 4 children teaching 4 other children. When you start to play the game, put the 8 who know how to play the game with 8 who do not and you can observe the final four play.</p> <p>Materials: Two 6-sided dice for the game White Boards Vis-à-vis pens</p> <p>Players: 2-4</p> <p>Purpose of the game: Practice determining if numbers are greater than, less than, or equal to another number.</p> <p>Directions:</p> <ol style="list-style-type: none"> 1. Player rolls one die or if a larger number is desired, the player rolls two dice and finds the sum. 2. This becomes the target number. 	<p>Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.</p>

3. Players prepare their white board in three columns.
4. Column 1: $>$ target number
5. Column 2: $<$ target number
6. Column 3: $=$ to target number
7. The first player rolls two dice and adds the numbers.
8. Player decides which column the number sentence goes into.
9. Player writes the number sentence in the column (e.g. Target number is 7, $2 + 3 < 7$).
10. Each player rolls 10 times.

Note: There is not a winner or a loser.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What would you like to do more of the next time we do math?

Start at 43 and count to 61.

Start at 82 and count backwards to 63.

Reflection (Confirm, Tweak, Aha!)

- Ask students to think about what they did today in math.
- Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
- Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
- Ask them to comment on something (if anything) they have learned today that was brand new to them.

Crayolas	number cards
Socks	

Opening
State the objective
Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.
Gain prior knowledge by asking students the following questions
What do you know about math? What do you know about addition? How many fingers do you have on your right hand? How many fingers do you have on your left hand? How many fingers do you have altogether? Did you add or did you count? When you increase a number it is addition. How many fingers do you have on 2 hands. If you take the fingers on one hand away and hid them behind your back, how many fingers do you have showing? Did you count backwards? Did you subtract? Subtraction is what you do when you decrease a number. Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing).

Content (the “Meat”)	
Problem of the Day	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a “teach to learn” opportunity and have the</p>
<p>Nancy has 3 black rocks and 9 white rocks in a bag. If Nancy pulls a rock out of the bag without looking, which color rock is she most likely to pull out? Why do you think what you think? Have students draw this problem on the white board.</p>	
Fact Practice	
<p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> <p style="margin-left: 40px;"> $1 + 2 = 3$ $2 + 1 = 3$ $3 - 2 = 1$ $3 - 1 = 2$ </p> <p>After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$”.</p> <p>The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$”.</p>	

Consult 4 Kids Lesson Plans

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 2, 8 and 10.

Have students write the entire Fact Family on the white board.

$$2 + 8 = 10$$

$$8 + 2 = 10$$

$$10 - 2 = 8$$

$$10 - 8 = 2$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 2, 8, and 10.

student become the teacher.

Math Vocabulary

Word for Today: ones

The word “ones” identifies the place value of a number. The ones place is the number that is written furthest to the right or if a number has only a single digit, then that numeral is in the ones place. The numerals: 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9 can all find themselves in the ones place—just one at a time.

In the number 34, 4 is in the ones place, in the number 76, the 6 is in the ones place. Try several other numbers to determine the digit that is in the ones place.

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

New Word <p style="text-align: center;">ones</p>	My Description <p style="text-align: center;">We count by 1s when we say a number that is one more</p>
Personal Connection <p style="text-align: center;">I can count by ones.</p>	Drawing 

It is important to review academic math vocabulary often throughout the day Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

Students will complete this notebook for each vocabulary word that they are given.

Activity Put Them In Order

Demonstrate how to play the game by bringing the children all together around a single table. Ask for children to volunteer to learn how to play the game. Begin with 2 children. Once you have taught 2, have each of them teach 1 other student while everyone is watching. Repeat one more time so that you now have 4 children teaching 4 other children. When you start to play the game, put the 8 who know how to play the game with 8 who do not and you can observe the final four play.

Materials:

Put Them In Order game board and numbers at the end of this game.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

<p>Prepare these by cutting out the numbers.</p> <p>Directions:</p> <ol style="list-style-type: none"> 1. Take the numbers and lay them out on the table face up. 2. Take turns and put the numbers in order on the Put Them In Order game board. 3. Say the number as you place it on the board.

students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 3, 4 and 7.

Have students write the entire Fact Family on the white board.

$$3 + 4 = 7$$

$$4 + 3 = 7$$

$$7 - 3 = 4$$

$$7 - 4 = 3$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 3, 4 and 7

student become the teacher.

Math Vocabulary

Word for Today: graph

Remind students that yesterday we discussed how a graph is a picture that helps us to compare different answers to the same question. Ask the children to determine if they like red, green, or blue the best when thinking of those three colors. Create a graph on the board that will show the student responses. Draw a sample of grid paper so children can see how each one of them is linked to one of the responses. Ask each child one at a time his/her preference and then chart the information. At the end have children create a sentence that explains the graph and write it on the board.

Have children review the entry from yesterday that they made in the Vocabulary notebook with a peer. After discussion, student may add or change the notebook if necessary..

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">graph</p>	<p>My Description</p> <p style="text-align: center;">A chart that shows the relationship of information and numbers</p>
<p>Personal Connection</p> <p style="text-align: center;">We will make a graph to show how many Skittle there are of each color.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word. (Ex. 4 students creating a right angle, multiple students acting out an equation)

Vocabulary Notebooks can be made from 1/2 of a composition book.

Students will complete this notebook for each vocabulary word that they are given.

Activity Clear the Deck

Review how to play the game Clear the Deck. When you are certain that the children remember how to play the game, let them select a partner to play the game with. After 10 minutes, have them change partners.

Materials:

Game cards from yesterday

Directions:

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

<ol style="list-style-type: none"> 1. Shuffle the cards and divide them equally between two players 2. Each person should place his/her 15 cards in a row on his "deck" 3. First player turns over one of his/her cards. Person tells the missing number. If he/she is correct, then the card is cleared from the deck and set aside. If child can not name the missing number, he/she turns the number back over and loses his/her turn 4. Winner is first student who clear the deck first

State the objective
Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.
Gain prior knowledge by asking students the following questions
<p>What do you know about addition?</p> <p>What is a Fact Family? If you are adding the number 2 and 3 together, what is the fact family of three numbers?</p> <p>What is a sum?</p> <p>In the Fact Family 2, 3, and 5 what is the sum?</p> <p>Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing). Sometimes you count forward or backward by 1s, other times for 2s, 3s, 4s, or many more. That's why addition and subtraction were invented so you didn't have to spend so much time counting. It is simply easier once you get the hang of it.</p>

Content (the "Meat")	
<p style="text-align: center;">Problem of the Day</p> <p>Look at this graph. Are there more squares with an "X" pattern, a vertical line pattern, or a solid pattern?</p>	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a "teach to learn"</p>
<p style="text-align: center;">Fact Practice</p> <p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> <p style="margin-left: 20px;"> $1 + 2 = 3$ $2 + 1 = 3$ </p>	

Consult 4 Kids Lesson Plans

<p> $3 - 2 = 1$ $3 - 1 = 2$ </p> <p>After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$".</p> <p>The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$". You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p> <p>Today you will introduce this activity and begin with the Fact Family of 3, 3, and 6. Have students write the entire Fact Family on the white board.</p> <p> $3 + 3 = 6$ $3 + 3 = 6$ $6 - 3 = 3$ $6 - 3 = 3$ </p> <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 3, 3, and 6</p>	<p>opportunity and have the student become the teacher.</p>
---	---

<h3>Math Vocabulary</h3>		<p>It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word. (Ex. 4 students creating a right angle, multiple students acting out an equation.) Vocabulary Notebooks can be made from 1/2 of a composition book.</p>			
<p>Word for Today: graph</p> <p>The word graph describes a tool that you can use in math so you can see and compare different things. For example, graphs might be in squares and you could color in the number of squares that would compare to the number that you are representing. So if you had 3 chocolate chip cookies, you would color in 3 squares, one for each cookie. Have children complete the Vocabulary notebook.</p> <p>Vocabulary Notebook Sample:</p>					
<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 35%; padding: 5px;"> <p>New Word</p> <p style="text-align: center;">Graph</p> </td> <td style="padding: 5px;"> <p>My Description</p> <p>A graphic or picture that tells a story about the information you have</p> </td> </tr> <tr> <td style="padding: 5px;"> <p>Personal Connection</p> <p>Yesterday we graphed the number of people who walk home..</p> </td> <td style="padding: 5px;"> <p>Drawing</p>  </td> </tr> </table>	<p>New Word</p> <p style="text-align: center;">Graph</p>		<p>My Description</p> <p>A graphic or picture that tells a story about the information you have</p>	<p>Personal Connection</p> <p>Yesterday we graphed the number of people who walk home..</p>	<p>Drawing</p> 
<p>New Word</p> <p style="text-align: center;">Graph</p>	<p>My Description</p> <p>A graphic or picture that tells a story about the information you have</p>				
<p>Personal Connection</p> <p>Yesterday we graphed the number of people who walk home..</p>	<p>Drawing</p> 				

<p style="text-align: center;">Activity Clear the Deck</p> <p>Demonstrate how to play the game by bringing the children all together around a single table. Ask for children to volunteer to learn how to play the game. Begin with 2 children. Once you have taught 2, have each of them teach 1 other student while everyone is watching. Repeat one more time so that you now have 4 children teaching 4 other children. When you start to play the game, put the 8 who know how to play the game with 8 who do</p>	<p>Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.</p>
---	---

Consult 4 Kids Lesson Plans

not and you can observe the final four play.

Materials:

Game cards

Directions:

1. Shuffle the cards and divide them equally between two players
2. Each person should place his/her 16 cards in a row on his "deck"
3. First player turns over one of his/her cards. Person tells the missing number. If he/she is correct, then the card is cleared from the deck and set aside. If child can not name the missing number, he/she turns the number back over and loses his/her turn
4. Winner is first student who clear the deck first

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What would you like to do more of the next time we do math?

Let's make a graph about the number of people who prefer Oreos, Chips Ahoy, and Animal Crackers

Reflection (Confirm, Tweak, Aha!)

- Ask students to think about what they did today in math.
- Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
- Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
- Ask them to comment on something (if anything) they have learned today that was brand new to them.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What is another way of telling you to add?

What is a Fact Family? If you are adding the number 4 and 3 together, what is the fact family of three numbers?

What is a sum?

What does equals mean? How does the = sign connect the numbers of a Fact Family.

Content (the "Meat")

Problem of the Day

Sue is thinking of a number. That number comes between 14 and 16. What is the number?

$$14 \text{ ____ } 16$$

Have students draw this problem on the white board.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

Today you will introduce this activity and begin with the Fact Family of 3, 5 and 8. Have students write the entire Fact Family on the white board.

$$3 + 5 = 8$$

$$5 + 3 = 8$$

$$8 - 3 = 5$$

$$8 - 5 = 3$$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 3, 5 and 8.

Math Vocabulary

Word for today: between

The word for today is between. Yesterday we played a game that demonstrated the word "between". In the game, Clear the Deck, you had to find the number that came "between" the two numbers on the card. Between is another way of saying in the middle of. When we make a peanut butter and jelly sandwich, the peanut butter and the jelly are between two slices of bread. In this case there are two things between. If we were to make a sandwich with mayonnaise, mustard, turkey lettuce and cheese between 2 slices of bread, we would have 5 things between.

On the board draw 2 squares at least 2 feet apart. Ask for a student volunteer to come up and draw one thing between the squares. Repeat until you have several items between the squares. Have children complete the vocabulary notebook for the word between.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">between</p>	<p>My Description</p> <p style="text-align: center;">In the middle</p>
<p>Personal Connection</p> <p style="text-align: center;">The sun is in the middle of the 2 happy faces.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word. (Ex. 4 students creating a right angle, multiple students acting out an equation)

Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Circle the Sum

Demonstrate how to play the game by bringing the children all together around a single table. Ask for children to volunteer to learn how to play the game. Begin with 2 children. Once you have taught 2, have each of them teach 1 other student while everyone is watching. Repeat one more time so that you now have 4 children teaching 4 other children. When you start to play the game, put the 8 who know how to play the game with 8 who do not and you can observe the final four play.

Materials: Game Board
 Vis-à-vis pens
 Sock or other eraser

Players: 1

Purpose of the game: Practice addition facts

Directions:

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

correct response.

Today you will introduce this activity and begin with the Fact Family of 4, 7, and 11.

Have students write the entire Fact Family on the white board.

$$4 + 7 = 11$$

$$7 + 4 = 11$$

$$11 - 4 = 7$$

$$11 - 7 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 4, 4, and 8.

Math Vocabulary

Word for today: pattern

Pattern is a word that describes a way that something is organized. Patterns repeat themselves. For example, the American flag repeats red and white stripes. Other patterns can be found in plaid, wallpaper, and in the way numbers work together. Think of a place where a pattern makes sense.

Create an entry in your Vocabulary Notebook to demonstrate your understanding of the word pattern.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">pattern</p>	<p>My Description</p> <p style="text-align: center;">Something that is organized and can be reproduced</p>
<p>Personal Connection</p> <p style="text-align: center;">I made a pattern out of the blocks.</p>	<p>Drawing</p> <p style="text-align: center;"> </p>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Calendar

Materials:

- Calendar template attached to this lesson plan

Directions:

1. Students will work independently.
2. Give each student a calendar grid.
3. Student should label the days of the week.
4. Student should label the name of the month.
5. Student should insert the date onto the calendar.
6. Student add pictures to identify special days (holidays, birthdays, special activities)

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What do you know about a calendar?

What are the names of the month?

What are the names of the days of the week?

Reflection (Confirm, Tweak, Aha!)

- Ask students to think about what they did today in math.
- Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
- Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
- Ask them to comment on something (if anything) they have learned today that was brand new to them.

<p>Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.</p>
Gain prior knowledge by asking students the following questions
<p>Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing). Sometimes you count forward or backward by 1s, other times for 2s, 3s, 4s, or many more. That's why addition and subtraction were invented so you didn't have to spend so much time counting. It is simply easier once you get the hang of it.</p> <p>What do you know about addition?</p> <p>What is a Fact Family? If you are adding the number 6 and 8 together, what is the fact family of three numbers?</p> <p>What is a sum?</p> <p>In the Fact Family 6, 4, and 10 what is the sum?</p>

the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 2, 8 and 10.

Have students write the entire Fact Family on the white board.

$$2 + 8 = 10$$

$$8 + 2 = 10$$

$$10 - 2 = 8$$

$$10 - 8 = 2$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 2, 8 and 10.

Math Vocabulary

Word for today: how many?

How many is a question asked when you want to know a total. Write a number sentence for this story: Shelly has 8 marbles. John gives her 7 marbles. How many marbles does Shelly have now?

Ask students to give you another problem. Illustrate it on the board and then create a number sentence.

Have children complete the vocabulary notebook for the word between.

Vocabulary Notebook Sample:

New Word How many	My Description Ask the question about quantity, total number
Personal Connection He asked me how many sweaters I had.	Drawing 

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

How many?

Materials:

- 2 ounce cups
- Cheerios
- Rice Chex
- Trix
- white board

Directions:

1. Have students work in pairs.
2. Students should make a guess as to how many piece of each cereal it will take to fill the 2 ounce cup.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

<ol style="list-style-type: none"> 3. Students should write the estimate on the white board, being sure to label the cereal type. 4. Once students have estimated the number of pieces of each cereal, students should get 1 cup of each type of cereal and count the pieces. 5. Students should write a comparison statement: My guess _____, Actual Number _____ for each type of cereal.

$$4 + 8 = 12$$

$$8 + 4 = 12$$

$$12 - 4 = 8$$

$$12 - 8 = 4$$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 4, 8 and 12.

Math Vocabulary

Words for today: domino

A domino is a game piece that has dots or spots on it. A domino is divided into two sides and sometimes you can have a domino that only has spots on one side or the other. Sometimes there are dots on both sides. The most common dominos have from double 0 to double 6 sets of spots. You play dominos by matching the spots. Another kind of dominos are called Double Nines which means the spots go from double zero to double 9.

Create an entry for the word domino in your Vocabulary Notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">domino</p>	<p>My Description</p> <p style="text-align: center;">Rectangular game piece with dots on it</p>

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

Give an example of a subtraction problem.

Why is the difference lower than the first number in a subtraction problem?

In a Fact Family how does the arrangement of the numbers change when you subtract?

What does equals mean? How does the = sign connect the numbers of a Fact Family in a subtraction problem.

Content (the "Meat")

Problem of the Day

What would you call the shape below?

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say,

"If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 4, 6 and 10. Have students write the entire Fact Family on the white board.

$$4 + 6 = 10$$

$$6 + 4 = 10$$

$$10 - 4 = 6$$

$$10 - 6 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 3, 9 and 12.

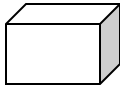

Math Vocabulary

Word for Today: cube

Cube is a word that describes a shape that has 6 equal sides. It is a three dimensional figure. It is made up of a faces that are squares but a cube is not flat like a square. Think of things that you see in the world which are shaped like a cube.

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">cube</p>	<p>My Description</p> <p style="text-align: center;">Hot dogs, mustard, catsup, drinks, ball games, family fun at the park</p>
<p>Personal Connection</p> <p>I put 4 ice cubes in my glass of tea.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

M and M Graph

Materials:

- Small bag of M and Ms for each pair of students
- Graph paper (attached to this lesson plan)
- Crayons

Directions:

1. Students work in pairs.
2. Students create a graph to show how many of each color of M and M is in the bag.
3. Students prepare the graph (demonstrate how to color in the squares).
4. Students share the individual graphs with the class.
5. Create a class graph combining all of the M and Ms.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What is a cube?

How many sides does a cube have?

Reflection (Confirm, Tweak, Aha!)

- Ask students to think about what they did today in math.
- Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
- Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
- Ask them to comment on something (if anything) they have learned today that was brand new to them.

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing). Sometimes you count forward or backward by 1s, other times for 2s, 3s, 4s, or many more. That's why addition and subtraction were invented so you didn't have to spend so much time counting. It is simply easier once you get the hang of it.

What is a Fact Family? If you are adding the number 7 and 6 together, what is the fact family of three numbers?

What is a sum?

What is another way of telling you to add?

Write a number sentence for the Fact Family 7, 6 and 13. Circle the sum.

Content (the "Meat")

Problem of the Day

If you have pennies and nickels how can you make 10¢?

Nickel = 5¢

Penny = 1¢

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

Consult 4 Kids Lesson Plans

$3 - 1 = 2$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 1, 9 and 10. Have students write the entire Fact Family on the white board.

$1 + 9 = 10$
 $9 + 1 = 10$
 $10 - 1 = 9$
 $10 - 9 = 1$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 1, 9 and 10.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Math Vocabulary

Word for Today: coin

The word coin refers to any metal circle which has been stamped with official symbols. In America, a coin can usually be a penny, a nickel, a dime, a quarter, and a 50¢ piece. A coin is received when someone needs to make change because the amount needed is not a dollar. Think about how each of these coins looks. Which is the largest, which the smallest? Which ones appear to be silver, which one is copper?

Complete an entry for coin in your Vocabulary Notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">coin</p>	<p>My Description</p> <p style="text-align: center;">A metal piece of money: dime, nickel quarter, penny</p>
<p>Personal Connection</p> <p style="text-align: center;">Did you put a coin in the box?</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Make A Dollar

Materials:

- Real or plastic coins (you can also go on line and get pictures of coins and print, however Lakeshore has coins relatively inexpensively and they can be used in a lot of different ways

Today you will introduce this activity and begin with the Fact Family of 3, 7 and 10. Have students write the entire Fact Family on the white board.

$$3 + 7 = 10$$

$$7 + 3 = 10$$

$$10 - 3 = 7$$

$$10 - 7 = 3$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 3, 6 and 9.

Talk about how we will continue with the four problems in the family even though two problems look exactly the same.

Math Vocabulary

Word for today: estimate

Estimate is a word that means to make a best guess. If you estimate something you make a very intentional decision about how many you think can be in the group that you are estimating. For example, if you reach into the candy jar for jelly beans and you bring out a handful and have 25 jelly beans, and if you were to guess the entire jar looks like it holds 4 handfuls of jelly beans, you would estimate that there are 100 jelly beans in the jar. That is a guess that would make sense so it is a good estimate.

Create an entry in your Vocabulary Notebook for the word estimate.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">estimate</p>	<p>My Description</p> <p style="text-align: center;">Making a guess based on information gathered</p>
<p>Personal Connection</p> <p style="text-align: center;">I estimate that it is 500 miles from here.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Graphing Coins

Materials:

- Paper
- Pencil
- Jar of coins (pennies, dimes, nickels, quarters)

Directions:

1. Students work in pairs and trace around one another's hand (student should create two hands).
2. After the hands are drawn, student reaches into the container of coins and pulls out a handful.
3. He/she then counts the number of each coin that he/she has drawn from the container.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

<ol style="list-style-type: none"> 4. Student draws the coins in the hand that was traced. 5. Students put the coins back in the jar and then prepare a graph of the coins that were drawn out. 6. Students share the graph with the class.

$$1 + 7 = 8$$

$$7 + 1 = 8$$

$$8 - 1 = 7 \text{ when you touched the in between part of your knuckles.}$$

$$8 - 7 = 1$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 1, 7 and 8

student become the teacher.

Math Vocabulary

Word for Today: month

A month is a period of time that is measured in days. There are twelve months each year. Some of the months have 30 days. Some months have 31 days. One month has 28 days except for every four years it has 29 days.

The months of the year are **January, February, March, April, May, June, July, August, September, October, November, December**

If you put your fists out in front of you and you start on the knuckle of the smallest finger of your left hand, and say the months of the year as you touch the knuckle, then the space in between the knuckle, the knuckle, the space between the knuckle and so on, you will say January, February, March, April, May, June, July (you will be at the end of your left hand).

You will begin August when you touch the knuckle on your right hand. September is the space, October the knuckle, November the space, and December the knuckle. Now you might wonder why that makes a difference. Every month you said when you touched a knuckle has 31 days. February has 28 or 29 dependent on the year. April, June, September, and November all have 30 days. These were the months you named

In your Vocabulary Notebook create an entry for the word month.

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Vocabulary Notebook Sample:

New Word <p style="text-align: center;">Month</p>	My Description <p style="text-align: center;">Measurement of time: January, May</p>
Personal Connection <p style="text-align: center;">There are 12 months in the year.</p>	Drawing <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about addition? What do you know about subtraction?

Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing)

Ask student volunteers for a number sentence. Write it on the board and discuss the name of each of the numbers (addends/sums, or minuend, subtrahend, and difference), the operations signs (+ and -) and also the equals sign which can be written = in a horizontal problem, and _____ (the underline) in a vertical problem. Write the problems students give you in both a horizontal ($5 + 4 = 9$) and vertical manner

$$\begin{array}{r} 5 \\ +4 \\ \hline 9 \end{array}$$

Content (the "Meat")

Problem of the Day

John and Jorge share chocolate Hershey kisses. They have six Kisses. If they both get the same number, how many will each get? Draw a picture to show your answer.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say,

"If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking

When possible, engage

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”. You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 4, 10, and 14. Have students write the entire Fact Family on the white board.

$$4 + 10 = 14$$

$$10 + 4 = 14$$

$$14 - 4 = 10$$

$$14 - 10 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 4, 10 and 14

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Math Vocabulary

Word for Today: addend

Description: Addend is the term we use to name the numbers in an addition problem that we are adding together. If we look at the math fact family for today, $4 + 10 = 14$ and also $10 + 4 = 14$, the numbers 4 and 10 are the addends. They are the two numbers that we are combining to equal 14. In a problem that looks like this: $4 + \square = 14$, the box represents the missing addend, which in this case would be 10. Write several problems on the board. Some have missing addends, in others have missing sums. Have students complete the problems.

In your Vocabulary Notebook review the entry for the word “addend” with a friend and be sure that it captures your understanding of the word.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">addend</p>	<p>My Description</p> <p style="text-align: center;">the numbers you add together to find a total or a sum</p>
<p>Personal Connection</p> <p style="text-align: center;">What is the sum of $9 + 2$?</p>	<p>Drawing</p> <div style="text-align: center; margin-top: 20px;"> $\begin{array}{r} 9 \\ +2 \\ \hline 11 \end{array}$ </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity Beans and Cups

Materials: dry pinto beans, dry lima beans and dry pink beans, baggies (place some of each bean in the baggie—6-7 of each kind of bean), 2 6-sided dice.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

Directions:

1. Review the game that students played yesterday.
2. Have students share how to play the game.
3. Have students play the game with new partners today.

Closing

Review

Say:

- Please recap what we did today.

the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Math Vocabulary

Word for Today: cylinder

Cylinder is the term we use to describe something that looks like an oatmeal box. The base and top of a cylinder is a circle and the edges of the cylinder are shaped by the base and the top, creating a shape without corners and sharp edges coming together in a 90° angle. Cylinders do not have corners. Ask students to identify other cylinders (cans of food, ice cream cartons, drums, salt and pepper shakers, etc.) Talk with students about how to draw a cylinder, beginning with the circle that is flat for the top

Followed by the straight edges that are connected to a curving bottom which is really the only piece of the circle that you can see. Also, if you shade the cylinder on one side and leave the other side clear, it helps the look of the cylinder.

Complete an entry for coin in your Vocabulary Notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">cylinder</p>	<p>My Description</p> <p style="text-align: center;">cans, glasses, trash cans</p>
<p>Personal Connection</p> <p style="text-align: center;">I drank the tea out of a cylinder.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from 1/2 of a composition book.

Students will complete this notebook for each vocabulary word that they are given.

Ask open-ended questions to determine what the rest of the group is thinking.</p>
<p>Look at the two shapes below. How are they alike?</p> <div style="display: flex; justify-content: space-around; align-items: center;">   </div>	
Fact Practice	
<p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> $\begin{array}{l} 1 + 2 = 3 \\ 2 + 1 = 3 \end{array}$	

Consult 4 Kids Lesson Plans

<p> $3 - 2 = 1$ $3 - 1 = 2$ </p> <p>After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$".</p> <p>The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$". You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p> <p>Today you will introduce this activity and begin with the Fact Family of 5, 5, and 10. Have students write the entire Fact Family on the white board.</p> <p> $5 + 5 = 10$ $5 + 5 = 10$ $10 - 5 = 5$ $10 - 5 = 5$ </p> <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 5, 5, and 10. Share with students that this fact is a double—the addends are the same.</p>	<p>When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.</p>
---	--

<h3>Math Vocabulary</h3>		<p>It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from ½ of a composition book.</p>				
<p>Word for Today: cylinder</p> <p>Cylinder is the term we use to describe something that looks like an oatmeal box. The base and top of a cylinder is a circle and the edges of the cylinder are shaped by the base and the top, creating a shape without corners and sharp edges coming together in a 90° angle. Cylinders do not have corners. Ask students to identify other cylinders (cans of food, ice cream cartons, drums, salt and pepper shakers, etc.)</p> <p>Have children complete the Vocabulary notebook.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 35%; padding: 5px;"> <p>New Word</p> <p style="text-align: center;">cylinder</p> </td> <td style="width: 65%; padding: 5px;"> <p>My Description</p> <p style="text-align: center;">a glass, a can, a garbage can, a vase are all cylinders</p> </td> </tr> <tr> <td style="padding: 5px;"> <p>Personal Connection</p> <p style="text-align: center;">I will drink the milk from a cylinder.</p> </td> <td style="padding: 5px;"> <p>Drawing</p> <div style="text-align: center;">  </div> </td> </tr> </table>			<p>New Word</p> <p style="text-align: center;">cylinder</p>	<p>My Description</p> <p style="text-align: center;">a glass, a can, a garbage can, a vase are all cylinders</p>	<p>Personal Connection</p> <p style="text-align: center;">I will drink the milk from a cylinder.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>
<p>New Word</p> <p style="text-align: center;">cylinder</p>	<p>My Description</p> <p style="text-align: center;">a glass, a can, a garbage can, a vase are all cylinders</p>					
<p>Personal Connection</p> <p style="text-align: center;">I will drink the milk from a cylinder.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about addition? What do you know about subtraction?

Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing)

Ask student volunteers for a number sentence. Write it on the board and discuss the name of each of the numbers (addends/sums, or minuend, subtrahend, and difference), the operations signs (+ and -) and also the equals sign which can be written = in a horizontal problem, and _____ (the underline) in a vertical problem. Write the problems students give you in both a horizontal ($17 - 8 = 9$) and vertical manner

$$17$$

$$\underline{-8}$$

$$9$$

Content (the "Meat")

Problem of the Day

Look at the squares below. Which one is divided into equal parts? How do you know?

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

Take advantage of any teachable moments
Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking

Consult 4 Kids Lesson Plans

<p style="text-align: center;">$3 - 1 = 2$</p> <p>After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$".</p> <p>The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$".</p> <p>You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. Consult 4 Kids Lesson Plans

through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 6, and 12 (a double)

Have students write the entire Fact Family on the white board.

$$6 + 6 = 12$$

$$6 + 6 = 12$$

$$12 - 6 = 6$$

$$12 - 6 = 6$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 6, 6, and 12. Ask students to give you examples of other doubles. Ask students to tell how doubles are different than other fact families.

Math Vocabulary

Word for Today: sum

Sum is the math term we use to describe the answer we get when we add numbers together. The sum is written on one side of an equals sign while on the other side will be written the numbers that were added or put together to arrive at the sum. A synonym for the word sum is total. Have students give you several problems and identify the sum by that word.

Have children review the entry in the Vocabulary notebook for the term sum. Have them share with a friend to be sure that they have captured the meaning.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">sum</p>	<p>My Description</p> <p style="text-align: center;">total in an addition problem</p>
<p>Personal Connection</p> <p style="text-align: center;">What is the sum of 5 + 3?</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Circle A Sum

Materials: Circle A Sum Sheet #2 (attached to the lesson plan), crayolas

Directions:

1. Review the game that students played yesterday.
2. Have students share how to play the game.
3. Have students play the game with new partners today.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Focus Student's Prior Knowledge

Give an example of an addition or a subtraction problem by writing it on the white board. Share this with a friend and explain, using math vocabulary, what you have written on the white board.

On the white board write an addition and/or a subtraction problem both vertically and horizontally. Tell your partner which sign represents equals.

Content (the "Meat")

Problem of the Day

Look at the problem written below. What number would you put in the  to make the number sentence correct?

$$5 + \heartsuit = 7$$

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

- 1 + 2 = 3
- 2 + 1 = 3
- 3 - 2 = 1
- 3 - 1 = 2

After they have written the problem in all 4 ways they will find a partner and say, "If 1 + 2 = 3, then 2 + 1 = 3".

The other student will respond with "Yes, and since that is true, 3 - 1 = 2, and 3 - 2 = 1".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and

Consult 4 Kids Lesson Plans

the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 7 and 13
Have students write the entire Fact Family on the white board.

$$6 + 7 = 13$$

$$7 + 6 = 13$$

$$13 - 6 = 7$$

$$13 - 7 = 6$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 6, 7 and 13.

Math Vocabulary

Word for Today: difference

Difference is the math term we use to describe the answer you get when you have subtracted one number from another. It is smaller than the top number, the minuend, unless you are subtracting 0. The difference is identifying how the top number will be different once you have subtracted something. It is letting you know that there is different value.

Have children complete the Vocabulary notebook for the word "difference".

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">difference</p>	<p>My Description</p> <p style="text-align: center;">The amount left after you have subtracted one number from another</p>
<p>Personal Connection</p> <p style="text-align: center;">The difference between 10 and 7 is three.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Math Blast!

Materials: Math Blast Board (separate file), 3 dice for each pair of students, games tokens or colored paper to mark numbers.

Directions:

1. Group students in pairs.
2. Player #1 rolls all three dice and adding or subtracting finds a total that equals one of the uncovered numbers on the Math Blast Board.
3. Player #2 repeats the process.
4. Play is complete when all numbers are covered.

Example: Student rolls a 3, 4, and a 5. He/she could say $3 + 4 + 5 = 12$. If 12 is covered, he/she could say $4 - 3 + 5 = 6$. If 6 is also covered, he/she could say $5 - 4 + 3 = 4$.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ". You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 9, 10, and 19. Have students write the entire Fact Family on the white board.

$$9 + 10 = 19$$

$$10 + 9 = 19$$

$$19 - 9 = 10$$

$$19 - 10 = 9$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 9, 10, and 19.

Math Vocabulary

Word for Today: least

Least is a term that we use to describe a numeral that has a value that is less than another numeral. For example 7 is less than 9. So if you were asked "Which number is the least, 7 or 9?" the answer would be 7 because it represents the least value. We can also show least by using the less than symbol $<$.

Have children complete the Vocabulary notebook for the word "least".

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">least</p>	<p>My Description</p> <p style="text-align: center;">the smallest number when you are looking at two or more numbers</p>
<p>Personal Connection</p> <p style="text-align: center;">Which number is least, 9 or 3?</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity

Fun Facts!

This activity will give students practice solving problems and also creating a message.

Directions:

1. Divide students into pairs or trios.
2. Give each pair or trio a deck Fun Fact? cards and a Game Board.
3. Shuffle cards and place them face down next to the game board.
4. Player 1 draws a card completes the problem, locates the answer on the game board and writes the letter from his/her card under the answer.
5. Player 2 repeats the process.
6. When all cards are turned and answers found, then students will read the Fun Fact!

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Focus:	Addition and Subtraction

Materials:

White boards	decks of cards with face cards and jokers removed
Crayolas	Taking the Prize
Socks	Beans or other game tokens

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about addition? What do you know about subtraction?

Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing)

Ask student volunteers for a number sentence. Write it on the board and discuss the name of each of the numbers (addends/sums, or minuend, subtrahend, and difference), the operations signs (+ and -) and also the equals sign which can be written = in a horizontal problem, and _____ (the underline) in a vertical problem. Write the problems students give you in both a horizontal ($17 - 8 = 9$) and vertical manner

$$17$$

$$\underline{-8}$$

$$9$$

Content (the "Meat")

Problem of the Day

You have two nickels. Do you have enough money to buy a piece of candy that costs 10¢? Explain your answer.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say,

"If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

<p style="text-align: center;">Activity</p> <p style="text-align: center;">Taking the Prize</p> <p>This activity was worked on yesterday. Ask students what they learned about playing the game that is helpful. Have students share strategies. Ask students to work in a different pairing today.</p> <p>Taking the Prize!</p>	<p>Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.</p>				

Consult 4 Kids Lesson Plans

Students in 1st grade need to practice addition and subtraction facts to automaticity. We have been working on Fact Families. This activity will give students more practice time.

Taking the Prize

Directions:

1. Divide students into pairs.
2. Give each pair a Taking the Prize Game Board, Taking the Prize Game cards, and game tokens (beans, markers, etc. for each student).
3. Shuffle the cards and place them face down beside the game board.
4. Player 1 takes the top card, finds the sum or difference, shares the problem with the other player and if the answer is correct then he/she places a game token on that number on the game board.
5. If player draws a subtraction problem, he/she may choose to move forward or move backward that number of spaces (It could be to the players' advantage to move backward if he/she is stuck toward the end of the game).
6. First player to land on the "Finish" space wins.

Consult 4 Kids Lesson Plans

through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 9, 9, and 18 (a double)

Have students write the entire Fact Family on the white board.

$$9 + 9 = 18$$

$$9 + 9 = 18$$

$$18 - 9 = 9$$

$$18 - 9 = 9$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 9, 9, and 18. Ask students to give you examples of other doubles. Ask students to tell how doubles are different than other fact families.

Math Vocabulary

Word for Today: nickel

Practice this Nickel Chant with the students. Then have them draw 5 nickels (this equals a quarter—count by 5's)

Nickel Chant

Nickel, nickel
Thick and fat
You're worth five cents
I know that!

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">nickel</p>	<p>My Description</p> <p style="text-align: center;">A coin worth 5 pennies</p>
<p>Personal Connection</p> <p style="text-align: center;">I have a nickel in my pocket.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Say What? (Like a riddle)

This activity was worked on yesterday. Ask students what they learned about playing the game that is helpful. Have students share strategies. Ask students to work in a different pairing today.

Say What?

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

This activity will give students practice solving problems and also creating a message

Say What?

Directions:

1. Divide students into pairs or trios.
2. Give each pair or trio a deck of Say What? cards and a Game Board.
3. Shuffle cards and place them face down next to the game board.
4. Player 1 draws a card completes the problem, locates the answer on the game board and writes the letter from his/her card under the answer.
5. Player 2 repeats the process.
6. When all cards are turned and answers found, then students will read the Say What message.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What would you like to do more of the next time we do math?

Give an example of how you will use what we did today in school tomorrow.

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about adding? What do you know about subtracting?

In a Fact Family how does the arrangement of the numbers change when you subtract?

What does equals mean? How does the = sign connect the numbers of a Fact Family in a subtraction problem?

Content (the “Meat”)

Problem of the Day

Is it possible or impossible for there to be green dogs on the street tomorrow? Tell how you know?

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say,

“If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

correct response.

Today you will introduce this activity and begin with the Fact Family of 8, 9 and 17
Have students write the entire Fact Family on the white board.

$$8 + 9 = 17$$

$$9 + 8 = 17$$

$$17 - 8 = 9$$

$$17 - 9 = 8$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 8, 9, and 17.

Math Vocabulary

Word for Today: quarter

Practice this Quarter Chant with the students. Then have students draw four quarters which is worth \$1.00

Quarter Chant

Quarter, quarter

Big and bold

You're worth twenty-five

I am told.

Have children create an entry in the Vocabulary Notebook for the word **quarter**.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">quarter</p>	<p>My Description</p> <p style="text-align: center;">An American coin worth 25 cents</p>
<p>Personal Connection</p> <p>I was given a quarter when I lost my tooth.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from 1/2 of a composition book.

Lesson Title:	Round 'Em Targets
Focus:	Rounding Numbers

Materials:	White boards	Round 'Em Game Board and Cards
	Crayolas	
	Socks	

Opening
State the objective
Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.
Gain prior knowledge by asking students the following questions
What do you know about rounding number?
When you count you can round a number off to the nearest 10. For example if you have 8 items you can round this off and say, "I have about 10 items." If you had 17 items, you can round off and say, "I have about 20 items." However is you have only 13 items, you would want to round off to a lower number and say, "I have about 10 items."
Draw 10 items on the board. Circle the 5 th item. Share with students that everything lower than the circle goes down, and beginning with the circled number and up, and the number goes up. Practice several of these with students.

Content (the "Meat")

Consult 4 Kids Lesson Plans

students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 8, 8 and 16. Have students write the entire Fact Family on the white board.

$$8 + 8 = 16$$

$$8 + 8 = 16$$

$$16 - 8 = 8$$

$$16 - 8 = 8$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 8, 8, and 16.

Math Vocabulary

Word for today: tens

Description: Tens is a term we use to describe a place where a numeral can be that values the numeral at 10. When we count: 10, 20, 30, 40, 50, 60, 70, 80, and 90, we have the numerals in the 10s place (except of course the 0). By being in the 10s place we understand that it is more than ones. When you think of money and dime or 10¢ is the same as 10 pennies.

Create an entry in your Vocabulary Notebook for the word tens.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">tens</p>	<p>My Description</p> <p style="text-align: center;">Counting by numbers that are 10 apart</p>
<p>Personal Connection</p> <p style="text-align: center;">I can count by 10s to 100.</p>	<p>Drawing</p> <p style="text-align: center; color: green; font-weight: bold;">10 20, 30, 40, 50, 60 ...</p>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from ½ of a composition book.

Activity

Round 'Em Targets

This activity was worked on yesterday. Ask students what they learned about playing the game that is helpful. Have students share strategies. Ask students to work in a different pairing today.

Round 'Em Targets

It is important that children learn about rounding numbers, especially if they are going to do effective mental math. The rules for rounding are simple: if the number is or ends in 0, 1, 2, 3, or 4, the number round down; and if the number is 5, 6, 7, 8, or 9, then the number is rounded up to the next ten.

Round 'Em Targets

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

Directions:

1. Divide students into pairs.
2. Give each group a Round 'Em Target Cards and Game Board.
3. Shuffle the cards and place them face down next to the game board.
4. Player 1 draws a card and determines if he/she should round the number up or down.
5. Once the decision has been made, he/she places the card in the column on the Game Board that indicates the number that the card was rounded to.

Example: the player draws a card that has a 43 on it. The rule would require that the student round down to "40", so he/she would place the card in the column labeled "40"

6. Player 2 then takes his/her turn.
7. Game is over when all cards have been rounded and placed in columns.

Focus:	Rounding Numbers

Materials: White boards Crayolas Socks
--

Opening
State the objective <p>Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math. We are going to work on rounding numbers.</p>
Gain prior knowledge by asking students the following questions <p>What do you know about addition? What do you know about subtraction? Addition and subtraction is really about understanding counting both forward (increasing) and backward (decreasing) When we round numbers we either move forward to a number that is slightly more or we move backward to a number that is slightly less. Draw a number line on the board showing the numbers 1-10. Circle the 5. Explain that everything below the 5 goes down and everything 5 and up, goes up. Ask when it would make sense to do this. (Number large)</p>

Content (the "Meat")	
Problem of the Day Which of these boxes has the fewest circles? <div style="display: flex; justify-content: space-around; margin-top: 10px;"> <div style="border: 1px solid black; padding: 5px; display: inline-block;"> ▲ ▲ ● ● ▲ ● ● ▲ ▲ ▲ ● </div> <div style="border: 1px solid black; padding: 5px; display: inline-block;"> ● ● ● ● ▲ ▲ ▲ ▲ ▲ </div> </div>	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.</p>
<p style="text-align: center;">Fact Practice</p> <p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> <p style="margin-left: 40px;"> $1 + 2 = 3$ $2 + 1 = 3$ $3 - 2 = 1$ $3 - 1 = 2$ </p> <p>After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$". The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$". You should have them practice this conversation (exactly as it is written) with 3-5 other</p>	

Consult 4 Kids Lesson Plans

students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 7, 9, and 16. Have students write the entire Fact Family on the white board.

$$7 + 9 = 16$$

$$9 + 7 = 16$$

$$16 - 7 = 9$$

$$16 - 9 = 7$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 7, 9 and 16.

Math Vocabulary

Word for today: dime

Practice this Dime Chant with the students. Then have students draw 10 dimes (count by 10s to 100 or \$1.00)

Dime Chant

Dime, dime
Little and thin
I remember
You're worth ten.

Have children complete the vocabulary notebook for the word equal.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">dime</p>	<p>My Description</p> <p style="text-align: center;">A dime has a value of 10 cents or 10 pennies</p>
<p>Personal Connection</p> <p style="text-align: center;">I have a dime in my pocket.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Round 'Em Targets

It is important that children learn about rounding numbers, especially if they are going to do effective mental math. The rules for rounding are simple: if the number is or ends in 0, 1, 2, 3, or 4, the number round down; and if the number is 5, 6, 7, 8, or 9, then the number is rounded up to the next ten.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

Round 'Em Targets

Directions:

1. Divide students into pairs.
2. Give each group a Round 'Em Target Cards and Game Board.
3. Shuffle the cards and place them face down next to the game board.
4. Player 1 draws a card and determines if he/she should round the number up or down.
5. Once the decision has been made, he/she places the card in the column on the Game Board that indicates the number that the card was rounded to.

Example: the player draws a card that has a 43 on it. The rule would require that the student round down to "40", so he/she would place the card in the column labeled "40"

6. Player 2 then takes his/her turn.
7. Game is over when all cards have been rounded and placed in columns.

Closing

Lesson Title:	Math Fun! Lesson #1
Focus:	Telling Time

Materials:

White boards	Fantastic Fun Game Board and Cards
Crayolas	Beans or other markers
Socks	Activity at end of the lesson plan

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about telling time? What are some of the ways that we measure time? Is a season a measurement of time? What are the seasons? Do we measure time in months? What are the names of the months? What about days? What are the names of the days? We also measure in weeks. Weeks are how many days long? How about hours? How many in a day? How about minutes? How many minutes in an hour?

We need to track time and there are many different ways that we can do that.

Content (the “Meat”)

Problem of the Day

Write the following numbers in order from the largest to the smallest. Tell how you know the order is correct.

23, 7, 10, 32, 13

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking

When possible, engage students in a “teach to learn” opportunity and have the

Consult 4 Kids Lesson Plans

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 8 and 14. Have students write the entire Fact Family on the white board.

$6 + 8 = 14$
 $8 + 6 = 14$
 $14 - 6 = 8$
 $14 - 8 = 6$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 6, 8, and 14.

student become the teacher

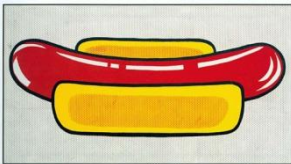

Math Vocabulary

Word for Today: clock

Description: The term clock is a word that describes a way we keep track of hours and minutes. A clock can be an analog clock. These are clock that we can often see on walls and are usually round and have then numbers 1-12 on them. They have two moving hands as well. A clock is too big to wear.

Have children complete the Vocabulary notebook. A clock that you can wear is called a watch. Ask children questions about what a clock looks like. If there is a clock in the room, have them look at it.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">picnic</p>	<p>My Description</p> <p style="text-align: center;">Hot dogs, mustard, catsup, drinks, ball games, family fun at the park</p>
<p>Personal Connection</p> <p style="text-align: center;">I love to go to the park with my family. We take a picnic lunch and barbeque hot dogs.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day
 Complete the Vocabulary notebook for each word.
 When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation)
 Vocabulary Notebooks can be made from 1/2 of a composition book

Activity

The focus for the next 4 days will be telling time both to the hour and the 1/2 hour. Telling

Focus on having young people "compete" in pairs or

Consult 4 Kids Lesson Plans

time with both a digital and analog (this is with a clock face) clocks.

Draw a circle on the white board and a rectangle. Ask the students what they have seen that comes in the shape of both a circle and a rectangle. List several of their suggestions. Tell them that clocks come in those two shapes. Tell them that a circle clock shows the time by using two hands, a short hand to point to the hour and a long hand to point to the minutes. Tell the children that this is called analog time (they may easily remember this word since it is unusual). Draw the circle and ask children about the numbers that they see on a clock face. Point to the face of a clock in the classroom if there is one. Show children how to write the numbers on the clock.

Step #1: Place the 12 and the 6 on the top and the bottom of the circle.

Step #2: Place the 3 and the 9 across from each other, $\frac{1}{2}$ way between the 12 and the 6.

Step #3: Numbers 1 and 2 are placed between the 12 and 3

Step #4: Numbers 4 and 5 placed between the 3 and 6

Step #5: Numbers 7 and 8 placed between the 6 and the 9

Step #6: Numbers 10 and 1 placed between the 9 and the 12

Have children draw several circles and practice this with them. Go through the process each time.

Tell them that the other way we tell time is on a digital clock which is usually shaped like a rectangle. Tell them that a digital clock show the time the way that you would write time.

Show them a digital clock face by drawing a rectangle on the board or chart paper.

Put the : in the center of the rectangle. Explain to children that this symbol ":" is used to separate the hour from the minutes. If the time is 1:00 it is written in that way—the hour is one and the minutes are 0.

Have students practice writing the time on the digital clock. Have children draw a rectangle and place a : in the center.

Practice writing different hours, have the minutes be either zero or 30 minutes.

Today's activity is to make an analog clock out of a paper plate or a circle.

Work through the process of writing the numbers on the plate or the circle in the same way that you did at the beginning

Have children cut out the clock hands that are provided in this lesson plan.

Using a brad, attach the clock hands to the clock face.

small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center

Closing

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about telling time? What are some of the ways that we measure time? Is a season a measurement of time? What are the seasons? Do we measure time in months? What are the names of the months? What about days? What are the names of the days? We also measure in weeks. Weeks are how many days long? How about hours? How many in a day? How about minutes? How many minutes in an hour?

We need to track time and there are many different ways that we can do that.

Content (the “Meat”)

Problem of the Day

Jorge has 4 nickels. Does she have enough to purchase a candy bar that costs a quarter? How do you know?

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

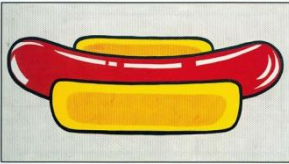

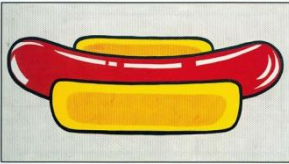

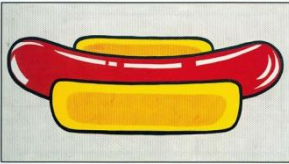

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking

When possible, engage students in a “teach to learn” opportunity and have the

Today you will introduce this activity and begin with the Fact Family of 7, 7, and 14. Have students write the entire Fact Family on the white board.

$7 + 7 = 14$
 $7 + 7 = 14$
 $14 - 7 = 7$
 $14 - 7 = 7$

Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 7, 7, and 14. Share with students that this fact is a double—the addends are the same.

student become the teacher

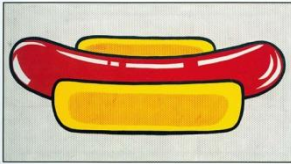

Math Vocabulary

Word for Today: digital

Description: The term digital refers to a type of clock that has the numbers written on the face of the clock in the same way that you would write it yourself. If it is twelve o'clock, a digital clock would read: 12:00. If it were three o'clock, the digital clock would read: 3:00. If the time is to the half hour, in other words if it was four thirty, a digital clock would look like this: 4:30. Since there are 60 minutes in an hour, $\frac{1}{2}$ hour would be 30 minutes.

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">picnic</p>	<p>My Description</p> <p style="text-align: center;">Hot dogs, mustard, catsup, drinks, ball games, family fun at the park</p>
<p>Personal Connection</p> <p style="text-align: center;">I love to go to the park with my family. We take a picnic lunch and barbeque hot dogs.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation)

Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book

Activity Telling Time

through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 7, 9, and 16.

Have students write the entire Fact Family on the white board.

$$7 + 9 = 16$$

$$9 + 7 = 16$$

$$16 - 7 = 9$$

$$16 - 9 = 7$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 7, 9 and 16..

Math Vocabulary

Word for today: coin

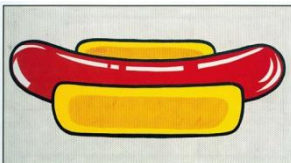

Description: the term coin refers to money around the world that it is made out of metal. It is not paper money. A coin is round and in some countries it will have a hole in the middle.

A coin can also be called change. In the United States the four most common coins are the penny, the nickel, the dime, and the quarter. Each of these has a different value.

Ask children to share the value of each of these coins with you.

Have children complete the vocabulary notebook for the word coin.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">picnic</p>	<p>My Description</p> <p style="text-align: center;">Hot dogs, mustard, catsup, drinks, ball games, family fun at the park</p>
<p>Personal Connection</p> <p style="text-align: center;">I love to go to the park with my family. We take a picnic lunch and barbeque hot dogs.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation)

Vocabulary Notebooks can be made from 1/2 of a composition book

Activity

Money

The focus for the next 7 days will be money, combining both bills and coins, understanding the decimal point and how this is all compared to 100 cents in a dollar.

There are four main coins that we use in the United States. They are the penny, the nickel, the dime and the quarter. We also have a 50¢ piece and a silver dollar, but those are not used as often as the other four coins. Each coin has a front (called the head) and a back (called the tail). A penny is worth 1¢, a nickel is worth 5¢, a dime is worth 10¢, and a quarter is worth 25¢. These values are all in comparison with the 100¢ it takes to make a dollar.

Work through several examples of counting money with the children. Draw the coins by drawing a circle and writing the value of the coin inside. For example:

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center

Consult 4 Kids Lesson Plans

Once the students have practiced they are ready to participate in the activity.

How Much?

Directions:

1. Divide the students into pairs
2. Give each pair a deck of How Much cards
3. Player 1 selects a card and determines the value of the coins on the card in cents.
4. Player 2 repeats the process
5. Activity is over when all of the cards have been selected.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about money? What are the names of the most commonly used coins in the United States. What does it mean when someone asks you if you have any change? Which of our coins is largest? Which is smallest? How many pennies in \$1.00. How many dimes in \$1.00. What is the difference between these two symbols: \$ and ¢? What is something that you can buy for \$1.00?

Content (the “Meat”)

Problem of the Day

Is it possible or impossible that there will be a cloud in the sky tomorrow? Explain your thinking.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other

*Activity → Teachable Moment(s) throughout

<p>students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p> <p>Today you will introduce this activity and begin with the Fact Family of 8, 8 and 16. Have students write the entire Fact Family on the white board.</p> <p style="margin-left: 20px;"> $8 + 8 = 16$ $8 + 8 = 16$ $16 - 8 = 8$ $16 - 8 = 8$ </p> <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 8, 8, and 16.</p>	<p>student become the teacher</p>				
<p style="text-align: center;">Math Vocabulary</p> <p>Word for today: value</p> <p>Description: The term value refers to how much something is worth. We place a value on things and you can generally figure the value in terms of money. For example, you might spend \$1.00 for a candy bar and get some change back, but is you were going to buy a pair of shoes, you would probably need at least \$10.00 to \$20.00. In the United States we believe that there is more value in a pair of shoes than in a candy bar. Think about some common items that you have at your house. What is the value of each of those when it comes to money? Which is considered more valuable?</p> <p>Create an entry in your Vocabulary Notebook for the word value.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 35%; padding: 5px; vertical-align: top;"> <p>New Word</p> <p style="text-align: center;">picnic</p> </td> <td style="width: 65%; padding: 5px; vertical-align: top;"> <p>My Description</p> <p style="text-align: center;">Hot dogs, mustard, catsup, drinks, ball games, family fun at the park</p> </td> </tr> <tr> <td style="width: 35%; padding: 5px; vertical-align: top;"> <p>Personal Connection</p> <p style="text-align: center;">I love to go to the park with my family. <p style="text-align: center;">Activity</p> <p style="text-align: center;">Money</p> <p>There are four main coins that we use in the United States. They are the penny, the nickel, the dime and the quarter. We also have a 50¢ piece and a silver dollar, but those are not used as often as the other four coins. Each coin has a front (called the head) and a back (called the tail). A penny is worth 1¢, a nickel is worth 5¢, a dime is worth 10¢, and a</p>	<p>Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center</p>				

Consult 4 Kids Lesson Plans

quarter is worth 25¢. These values are all in comparison with the 100¢ it takes to make a dollar.

Work through several examples of counting money with the children. Draw the coins by drawing a circle and writing the value of the coin inside. For example:

Once the students have practiced they are ready to participate in the activity.

How Much?

Directions:

1. Divide the students into pairs
2. Give each pair a deck of How Much cards
3. Player 1 selects a card and determines the value of the coins on the card in cents.
4. Player 2 repeats the process
5. Activity is over when all of the cards have been selected.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What would you like to do more of the next time we do math?

What are the different shapes that you made with the marshmallows and toothpicks

Where can you find those shapes in the world?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them

students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 8, 9 and 17
Have students write the entire Fact Family on the white board.

$$8 + 9 = 17$$

$$9 + 8 = 17$$

$$17 - 8 = 9$$

$$17 - 9 = 8$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 8, 9, and 17

Math Vocabulary

Word for Today: quarter

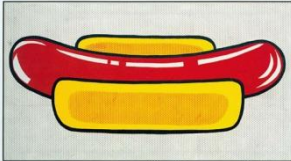

Description: Quarter is a word that we use to describe a coin in the United States that is worth \$.25 or 25¢. It is called a quarter because it takes four of them to equal one dollar, each coin is worth a quarter of a dollar. Practice this Quarter Chant with the students. Then have students draw four quarters which is worth \$1.00

Quarter Chant

Quarter, quarter
Big and bold
You're worth twenty-five
I am told.

Have children revisit the entry in the Vocabulary Notebook for the word **quarter**.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">picnic</p>	<p>My Description</p> <p style="text-align: center;">Hot dogs, mustard, catsup, drinks, ball games, family fun at the park</p>

Component	Math
Grade Level:	First Grade
Lesson Title:	Math Fun! Lesson #1
Focus:	Addition

Materials:	
White boards	dice (3 for each pair)
Crayolas	
Socks (for erasers)	

Opening
State the objective
Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.
Gain prior knowledge by asking students the following questions
What do you know about addition? What do the words, “all together” mean and have to do with addition? What do the words sum, addend, and how many have to do with addition? Please write a number sentence that shows this story: John has 3 cookies. His friend gave him two cookies. How many cookies does he have in all?

Content (the “Meat”)	
Problem of the Day	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.</p>
<p>I am the answer to the number sentence $3 + 4 = \underline{\quad}$. What number am I? Explain.</p>	
Fact Practice	
<p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> <p style="margin-left: 20px;">$1 + 2 = 3$ $2 + 1 = 3$ $3 - 2 = 1$ $3 - 1 = 2$</p> <p>After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$”.</p> <p>The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$”.</p> <p>You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p> <p>Today you will introduce this activity and begin with the Fact Family of 4, 9 and 13. Have students write the entire Fact Family on the white board.</p>	

Consult 4 Kids Lesson Plans

$$4 + 9 = 13$$

$$9 + 4 = 13$$

$$13 - 4 = 9$$

$$13 - 9 = 4$$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 4, 9 and 13.

Math Vocabulary

Word for Today: column addition

Description: The term column addition refers to the adding of number when you have more than 2 numbers. In a problem it could look like this: $3 + 4 + 2 = 9$. Or it could be written this way:

$$\begin{array}{r} 3 \\ 4 \\ +2 \\ \hline \end{array}$$

You add a column in exactly the same way as you add 2 numbers, you just add one or two more numbers. Write several examples of a column addition problem.

Create an entry for "column addition" in your Vocabulary Notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">column addition</p>	<p>My Description</p> <p style="text-align: center;">More than two numbers in a vertical space, like a column.</p>
<p>Personal Connection</p> <p style="text-align: center;">I like to do column addition.</p>	<p>Drawing</p> $\begin{array}{r} 16 \\ 15 \\ +14 \\ \hline \end{array}$

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Column Addition

Column Addition

A column of numbers is usually 3 to 4 numbers in a vertical column or a horizontal row. Often times we look at addition of two numbers only, for example $7 + 5$ or $23 + 6$ and so on. In column addition you have problems that look like this: $4 + 5 + 6 =$ or

$$\begin{array}{r} 4 \\ 5 \\ +6 \\ \hline \end{array}$$

When adding a column, it is sometimes easier if you can find two addends that equal 10. For example, $4 + 6 = 10$, and $10 + 5 = 15$. Sometimes you cannot find a 10, so you add each of the numbers.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

Tri Add

Directions:

1. Divide students into pairs
2. Give each pair 3 dice (6-sided or 9 sided), white boards and pens/crayons
3. Player 1 rolls the dice and then create an addition problem on his/her white board
4. He/she then finds the total and reads the problem aloud to his partner
5. Player 2 then repeats the process
6. Activity is over when each player has had the opportunity to write 10 equations.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What would you like to do more of the next time we do math?

What does it mean when we say we found an answer by addition?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

Consult 4 Kids Lesson Plans

Consult 4 Kids Lesson Plans

Today you will introduce this activity and begin with the Fact Family of 4, 6, and 10. Have students write the entire Fact Family on the white board.

$$4 + 6 = 10$$

$$6 + 4 = 10$$

$$10 - 4 = 6$$

$$10 - 6 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 4, 6, and 10..

Math Vocabulary

Word for Today: vertical

Description: The word vertical means up and down like you are when you stand up straight. The walls of buildings are vertical, trees are verticals, and columns are vertical as well. The opposite of vertical is horizontal which means like you are when you lay down.

In your Vocabulary Notebook create the entry for the word “vertical” and with a friend review and be sure that it captures your understanding of the word.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">vertical</p>	<p>My Description</p> <p style="text-align: center;">A line that goes up and down, like when you are standing.</p>
<p>Personal Connection</p> <p style="text-align: center;">When I walked down the street I was vertical.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

State the objective
Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.
Gain prior knowledge by asking students the following questions
What do you know about addition? What do the words, “all together” mean and have to do with addition? What do the words sum, addend, and how many have to do with addition? Please write a number sentence that shows this story: Linda has 7 dolls. She got 2 dolls for her birthday. How many dolls does Linda have all together?

Content (the “Meat”)	
<p style="text-align: center;">Problem of the Day</p> <p>Dan has a card with $5 + 2 = \underline{\quad}$ on it. Fred has a card with $3 + 6 = \underline{\quad}$. Whose card has the greater sum? How do you know?</p>	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly.</p> <p>Check in about what is happening and what they are thinking.</p> <p>Take advantage of any teachable moments.</p> <p>Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.</p> <p>When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.</p>
<p style="text-align: center;">Fact Practice</p> <p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> <p style="margin-left: 20px;"> $1 + 2 = 3$ $2 + 1 = 3$ $3 - 2 = 1$ $3 - 1 = 2$ </p> <p>After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$”.</p> <p>The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$”.</p> <p>You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p>	

Consult 4 Kids Lesson Plans

Today you will introduce this activity and begin with the Fact Family of 4, 7, and 11. Have students write the entire Fact Family on the white board.

$$4 + 7 = 11$$

$$7 + 4 = 11$$

$$11 - 4 = 7$$

$$11 - 7 = 4$$

Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 4, 7, and 11. Share with students that this fact is a double—the addends are the same.

Math Vocabulary

Word for Today: horizontal

Description: The term horizontal describes the way you are when you are laying down at night on your bed or when you are laying down on the floor. Roads and streets are horizontal, so are sidewalks and trees when they fall down. Practice drawing a horizontal line. Horizontal is the opposite of vertical.

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

New Word horizontal	My Description Horizontal means going across. 
Personal Connection At night I sleep in a horizontal position.	Drawing 

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about addition? What do the words, “all together” mean and have to do with addition? What do the words sum, addend, and how many have to do with addition? Please write a number sentence that shows this story: Joe has 3 ice cream bars. Frank has 5 ice cream bars. Luis has 2 ice cream bars. How many ice cream bars do the boys have all together?

Content (the “Meat”)

Problem of the Day

Copy and complete the list of numbers. How do you know what the missing numbers are?

5, 10, 15, 20, _____, _____, _____

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 4, 8 and 12.

Have students write the entire Fact Family on the white board.

$$4 + 8 = 12$$

$$8 + 4 = 12$$

$$12 - 4 = 8$$

$$12 - 8 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 4, 8, and 12..

Math Vocabulary

Word for Today: sum

Description: The term sum is the word we use to talk about the answer in an addition problem. When you add the number $3 + 2$ you will have a total of 5. This total is a sum.

What is the sum in this problem: $5 + 1 = 6$? What is the sum in this problem $3 + 4 + 1 + 8$?

Complete an entry for sum in your Vocabulary Notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">sum</p>	<p>My Description</p> <p style="text-align: center;">Add it up and get the sum</p>
<p>Personal Connection</p> <p style="text-align: center;">9 is the sum of $6 + 3$.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity Addition

Column Addition

A column of numbers is usually 3 to 4 numbers in a vertical column or a horizontal row. Often times we look at addition of two numbers only, for example $7 + 5$ or $23 + 6$ and so on. In column addition you have problems that look like this: $4 + 5 + 6 =$ or

$$\begin{array}{r} 4 \\ 5 \\ +6 \\ \hline \end{array}$$

When adding a column, it is sometimes easier if you can find two addends that equal 10. For example, $4 + 6 = 10$, and $10 + 5 = 15$. Sometimes you cannot find a 10, so you add each of the numbers.

Add 'Em

Directions:

1. Divide students into pairs
2. Give each pair a Add 'Em Game Board and a deck of cards

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

<ol style="list-style-type: none"> 3. Shuffle the cards 4. Player 1 turns up the first card and finds the sum of the three numbers. He/she then locates the answer on the game board and places a marker on it 5. Player two then repeats the process 6. Game is over when all spots are covered.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about word or story problems? Many times when we do the “problem of the day” we have a story that goes with the math. When we do the math we a number sentence. What are some of the key words that you will find in word problems? How do these words help you know what to do?

Content (the “Meat”)

Problem of the Day

Tell whether the number 10 makes each sentence true. Tell how you know for each.

$$5 + 5 =$$

$$6 + 3 =$$

$$3 + 7 =$$

$$4 + 6 =$$

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 4, 5, and 9.

Have students write the entire Fact Family on the white board.

$$4 + 5 = 9$$

$$5 + 4 = 9$$

$$9 - 4 = 5$$

$$9 - 5 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 4, 5 and 9.

Math Vocabulary

Word for today: context

Description: The term context refers to the words in a story problem that tell you the story that is represented in a number sentence. Context gives you a look at what was going on and hopefully will make the picture of the math more clear in your mind. Context is used to help you understand.

Have children complete the vocabulary notebook for the word context.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">context</p>	<p>My Description</p> <p style="text-align: center;">Words that surround other words and help you make sense of it</p>
<p>Personal Connection</p> <p style="text-align: center;">The story problem is the context for the number sentence $3 + 5 = 8$.</p>	<p>Drawing</p> <p style="text-align: center;">eraser $3 + 5 = 8$ total in all</p>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity Word Problems

Word Problems:

A word problem is a story that has math in it. When you hear a story problem you can write a number sentence to represent the math. An example of a story problem follows: Jorge had 7 cookies. His mother gave him 5 more. How many cookies does Jorge have now? A number sentence would look like this: 7 cookies + 5 cookies = 12 cookies. There are clues in the story. Words like now or all together tell us that we will add. If the word problem went like this: Jorge had 7 cookies. His mother ate 5 of them. How many cookies does Jorge have left? would tell us that the number sentence needs to look like this $7 - 5 = 2$. When we work with word problems it is important to think about what question we are being asked. This makes it easier to know whether or not we add or subtract.

Story Problems

Directions:

1. Divide students into trios

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

<ol style="list-style-type: none"> 2. Give each trio a Word Problem Card and an Answer Board 3. Working together, trios read the problem and write a number sentence and solve the problem. 4. The trio then looks to the Answer Board to be sure that there is an answer like the one they found. <p style="padding-left: 20px;">Activity is complete when all problems have been solved.</p>	
---	--

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What would you like to do more of next time?

What are the different shapes that you made with the marshmallows and toothpicks

Where can you find those shapes in the world?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

Today you will introduce this activity and begin with the Fact Family of 5, 6 and 11. Have students write the entire Fact Family on the white board.

$$5 + 6 = 11$$

$$6 + 5 = 11$$

$$11 - 5 = 6$$

$$11 - 6 = 5$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 5, 6, and 11.

Math Vocabulary

Word for today: number sentence

Description: The term number sentence refers to the problem that we write that demonstrates the math for the story we read. A number sentence can look like this: $4 + 5 = 9$. The story might be John has 4 marbles. His mother gives him 5 marbles. How many marbles does John have altogether? Write a number sentence for this story: Judy has 3 flowers. She is given 5 more flowers. How many flowers does she have altogether?

Create an entry in your Vocabulary Notebook for the word number sentence.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">number sentence</p>	<p>My Description</p> <p style="text-align: center;">Number sentences tell you how numbers are related</p>
<p>Personal Connection</p> <p>If John has 2 pencils and Jill has 3 pencils, they have 5 pencils. This is the number sentence: $2 + 3 = 5$</p>	

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity Word Problems

Word Problems:

A word problem is a story that has math in it. When you hear a story problem you can write a number sentence to represent the math. An example of a story problem follows: Jorge had 7 cookies. His mother gave him 5 more. How many cookies does Jorge have now? A number sentence would look like this: $7 \text{ cookies} + 5 \text{ cookies} = 12 \text{ cookies}$. There are clues in the story. Words like now or all together tell us that we will add. If the word problem went like this: Jorge had 7 cookies. His mother ate 5 of them. How many cookies does Jorge have left? would tell us that the number sentence needs to look like this $7 - 5 = 2$. When we work with word problems it is important to think about what question we are being asked. This makes it easier to know whether or not we add or subtract.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

Story Problems

Directions:

1. Divide students into trios
2. Give each trio a Word Problem Card and an Answer Board
3. Working together, trios read the problem and write a number sentence and solve the problem.
4. The trio then looks to the Answer Board to be sure that there is an answer like the one they found.
5. Activity is complete when all problems have been solved.

Grade Level:	First Grade
Lesson Title:	Math Fun! Lesson #7
Focus:	Word Problems

Materials:	Activity at the end of this lesson plan
White boards	
Crayolas	
Socks (use as erasers)	

Opening
State the objective
Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.
Gain prior knowledge by asking students the following questions
What do you know about word or story problems? Many times when we do the “problem of the day” we have a story that goes with the math. When we do the math we a number sentence. What are some of the key words that you will find in word problems? How do these words help you know what to do?

Content (the “Meat”)	
Problem of the Day	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly.</p> <p>Check in about what is happening and what they are thinking.</p> <p>Take advantage of any teachable moments.</p> <p>Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.</p> <p>When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.</p>
<p>Look at the numbers below. Which is an even number? Explain how you know.</p> <p style="text-align: center;">3 17 6 15</p>	
Fact Practice	
<p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> <p style="margin-left: 20px;">1 + 2 = 3 2 + 1 = 3 3 – 2 = 1 3 – 1 = 2</p> <p>After they have written the problem in all 4 ways they will find a partner and say, “If 1 + 2 = 3, then 2 + 1 = 3”.</p> <p>The other student will respond with “Yes, and since that is true, 3 – 1 = 2, and 3 – 2 = 1”.</p> <p>You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p>	

Consult 4 Kids Lesson Plans

Today you will introduce this activity and begin with the Fact Family of 5, 7, and 12. Have students write the entire Fact Family on the white board.

$$5 + 7 = 12$$

$$7 + 5 = 12$$

$$12 - 5 = 7$$

$$12 - 7 = 5$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 85, 7 and 12.

Math Vocabulary

Word for Today: how many

Description: The term how many is used in a word problem to let the reader know that this is asking you to perform a mathematical operation. If it is combined with the word left, reading how many left—this is a clue for you to subtract. If it is combined with the word altogether, then this is a clue for you to add. How many is a question and the others words let you know what kind of an answer is needed.

Have children revisit the entry in the Vocabulary Notebook for the word **how many**.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">how many</p>	<p>My Description</p> <p style="text-align: center;">Term used in a word problem that lets you know to add</p>
<p>Personal Connection</p> <p style="text-align: center;">If I have 4 balloons and you have 3 balloons, how many do we have together?</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Word Problems

Word Problems:

A word problem is a story that has math in it. When you hear a story problem you can write a number sentence to represent the math. An example of a story problem follows: Jorge had 7 cookies. His mother gave him 5 more. How many cookies does Jorge have now? A number sentence would look like this: 7 cookies + 5 cookies = 12 cookies. There are clues in the story. Words like now or all together tell us that we will add. If the word problem went like this: Jorge had 7 cookies. His mother ate 5 of them. How many cookies does Jorge have left? would tell us that the number sentence needs to look like this 7 - 5 = 2. When we work with word problems it is important to think about what question we are being asked. This makes it easier to know whether or not we add or subtract.

Today we are going to work on writing stories to go with number sentences. For example if you read the number sentence: 7 - 5 = 2, you would need to make up a story such as, Jorge has 7 balloons. 5 of them popped. How many does he have left? Do several

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

$$8 + 5 = 13$$

$$13 - 5 = 8$$

$$13 - 8 = 5$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 5, 8, and 13. Ask students to give you examples of other doubles. Ask students to tell how doubles are different than other fact families.

Math Vocabulary

Word for Today: difference

Description: The term difference is the word we use to describe the answer to a subtraction problem. The word is difference because it is very descriptive of the operation of subtraction. You start with a total, take some items away, and what you have left is the difference. Look at this problem: $7 - 5 = 2$. The difference is 2.

Create an entry in your Vocabulary Notebook for the word difference.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">difference</p>	<p>My Description</p> <p style="text-align: center;">In subtraction the amount you have left when you subtract</p>
<p>Personal Connection</p> <p>The difference of $12 - 4$ is 8. In other words, 12 is 4 more than 8 or 8 more than 4.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Lesson Title:	Math Fun! Lesson #9
Focus:	Addition problems

Materials:

White boards Activity at the end of the lesson plan
 Crayolas
 Socks (for erasers)

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Focus Student's Prior Knowledge

What do you know about addition? What do you call an answer to an addition problem? How many numbers can you add together in an addition problem? (unlimited). What is the opposite of addition? When you add do you end up with more than you started with or less than you started with? Give an example of an addition problem.

Content (the "Meat")

Problem of the Day

Draw 4 groups of 4 apples. How many apples are there in all? Use your picture to explain.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ". You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 9 and 15.

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

<p>Have students write the entire Fact Family on the white board.</p> $6 + 9 = 15$ $9 + 6 = 15$ $15 - 6 = 9$ $15 - 9 = 6$ <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 6, 9 and 15.</p>					
<h3>Math Vocabulary</h3>	<p>It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word.</p> <p>When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.</p>				
<p>Word for Today: addend</p> <p>Description: The term addend is a word that we use to describe the numbers that we add together in an addition problem. In the problem $5 + 6 = 11$, 5 and 6 are the addends. What are the addends in these two problems: $3 + 2 = 5$ or $6 + 3 = 9$.</p> <p>Have children review the Vocabulary notebook for the word addend.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%; padding: 5px;"> <p>New Word</p> <p style="text-align: center;">addend</p> </td> <td style="width: 50%; padding: 5px;"> <p>My Description</p> <p style="text-align: center;">The two or more numbers that you add together are the addends</p> </td> </tr> <tr> <td style="padding: 5px;"> <p>Personal Connection</p> <p style="text-align: center;">In the number sentence $6 + 4 = 10$, the 6 and the 4 are addends. State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about addition? What do you call an answer to an addition problem? How many numbers can you add together in an addition problem? (unlimited). What is the opposite of addition? When you add do you end up with more than you started with or less than you started with?

Content (the “Meat”)

Problem of the Day

Joan has 11 books. She gives 5 to a friend. How many books does she have left?

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”. You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 7 and 13.

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

<p>Have students write the entire Fact Family on the white board.</p> $6 + 7 = 13$ $7 + 6 = 13$ $13 - 6 = 7$ $13 - 7 = 6$ <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 6, 7, and 13</p>					
<p>Math Vocabulary</p>	<p>It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.</p>				
<p>Word for today: minus</p> <p>Description: Minus is a term we use in a subtraction problem. It tells you to take something away from the total. When you minus something, you take away something. Minus is a word that means you are reducing something.</p> <p>Review the entry for the word minus that is in your Vocabulary notebook.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse; margin-top: 10px;"> <tr> <td style="width: 30%; padding: 5px;"> <p>New Word</p> <p style="text-align: center;">minus</p> </td> <td style="padding: 5px;"> <p>My Description</p> <p style="text-align: center;">Subtraction, take away, difference are terms that go with the word minus which means less that it was to begin with</p> </td> </tr> <tr> <td style="padding: 5px;"> <p>Personal Connection</p> <p style="text-align: center;">I had twelve rocks and I gave 2 away, so now I have 10. State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

Ask children what they know about addition. Ask them to share what they do to write number sentences? Ask them about story problems and how they connect to number sentences?

Content (the “Meat”)

Problem of the Day

If Joe went to the park at 2:00 and he plays for 2 hours. What time is it when he goes home?

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 8 and 14.

Have students write the entire Fact Family on the white board.

$$6 + 8 = 14$$

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

Today you will introduce this activity and begin with the Fact Family of 3, 7, and 10. Have students write the entire Fact Family on the white board.

$$\begin{aligned} 3 + 7 &= 10 \\ 7 + 3 &= 10 \\ 10 - 3 &= 7 \\ 10 - 7 &= 3 \end{aligned}$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 3, 7, and 10.

Math Vocabulary

Word for Today: plus

Description: The term plus means addition. It means that you have something to start with and you are going to add something to it. When we read an addition problem we say 5 plus 4 equals 9. We write it this way: $5 + 4 = 9$.

Create an entry for “plus” in your Vocabulary Notebook. Talk with a partner about what this word means. Use it in a sentence.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">plus</p>	<p>My Description</p> <p style="text-align: center;">Adding two things together is done when you say this plus this</p>
<p>Personal Connection</p> <p style="text-align: center;">It is easier to do a plus problem than a minus problem</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity Addition

Addition

Addition is the math operation that has you combine two numbers or two groups of items. For example if you have the following:

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

you could simply count the happy faces. Or you count the number of faces in the first box (6) and the number in the second box (8), and write the math problem $6 + 8 =$ or

$$\begin{array}{r} 6 \\ +8 \\ \hline \end{array}$$

No matter which way you do the problem, the total number of happy faces is 14. If students are struggling with addition problems, they should draw the problem. This obviously becomes cumbersome when the numbers are large, but can be helpful when learning the process.

Work 8-10 problems on the board with the students. Encourage students to complete the problems on their own white board, showing the answers that he/she has.

This Is The Sum

Directions:

1. Divide students into pairs.
2. Give each pair a deck of cards with face cards, jokers, and 10s removed, and a white board.
3. Shuffle the cards and deal them out equally to the two players.
4. Player places his/her cards face down in front of him/her.
5. Each player turns over a card and the pair writes the equation on the white board with the correct total.
6. Play is over when pair has 15 problems.

Closing

Review

Today you will introduce this activity and begin with the Fact Family of 4, 7, and 11. Have students write the entire Fact Family on the white board.

$$4 + 7 = 11$$

$$7 + 4 = 11$$

$$11 - 4 = 7$$

$$11 - 7 = 4$$

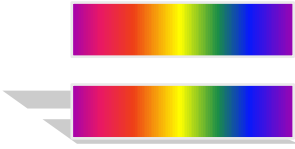

Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 4, 7 and 11.

Math Vocabulary

Word for Today: equal

Description: The term equal means that two things have the same value. $3 + 6$ has the same value as $4 + 5$. Both of these equations equal 9. An equal sign is two short lines written one on top of the other. The symbol signals that two things are the same.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">equal</p>	<p>My Description</p> <p style="text-align: center;">$5 + 3$ and $6 + 2$ have equal value</p>
<p>Personal Connection</p> <p style="text-align: center;">These two sums are equal.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

Have students write the entire Fact Family on the white board.

$$5 + 7 = 12$$

$$7 + 5 = 12$$

$$12 - 5 = 7$$

$$12 - 7 = 5$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 5, 7, and 12. Share with students that this fact is a double—the addends are the same.

Math Vocabulary

Word for Today: minus

Description: The term minus refers to the sign that indicates you need to subtract. It is a straight line. When you minus one number from another, you make the larger number less by the second number that you say after the word minus. We would read a math problem like this: 5 minus 3 equals 2. We would write it $5 - 3 = 2$

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">minus</p>	<p>My Description</p> <p style="text-align: center;">Minus means to make less by a certain number</p>
<p>Personal Connection</p> <p>I am 8 years old. My brother is 3. $8 - 3 = 5$, and I am 5 years older.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book

Activity Subtraction

Subtraction

Subtraction is a math operation that begins with a total number and then removes part of that total. The difference is what is left AFTER you have removed a certain number of objects. If you start with 9 happy faces and you remove 6 happy faces (the number being placed in the second box, the subtraction problem will tell you how many are left in the first box.

<p>☺☺☺☺☺</p> <p>→</p> <p>(☺☺☺) ☺ →</p> <p>↓</p> <p>☺☺☺</p>	<p>☺☺☺☺☺</p> <p>☺</p>
--	-----------------------

The problem is written: $9 - 6 = 3$ or

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

$$\begin{array}{r} 9 \\ -6 \\ \hline 3 \end{array}$$

Subtraction is the reciprocal of addition. Instead of trying to find the total, you know the total and are trying to find the difference in the total if you remove several of the objects from the group.

Rather than demonstrating this with white boards and erasing objects, have the students use small Post-Its. Draw a circle on the white board. Ask students to give you a number of Post-Its to use under 20. Place that number of Post-Its in the circle. Count them and write the number under the circle. Draw a second circle to the right of the first, and ask students how many of the Post-Its from the first circle they would like to move to the second circle. Physically move those Post-Its and write the number underneath the second circle. Now ask the students how many Post-Its are left in the original circle. This then becomes the difference. Write each of the subtraction problems in the horizontal and vertical form after you have done the manipulation with the Post-Its.

What's The Difference?

Directions:

1. Divide students into pairs.
2. Give each pair a What's The Difference Problem Board and piece of blank paper. (Note: If you want to use the game board more than one, laminate or put in a sheet protector)
3. Have students fold the paper until they have 8 spaces on one side and 8 on the other. (This will become the paper they write the problems on.)
4. Working together, the pair follows the directions on the Problem Board and then writes the subtraction problem on the blank paper, one problem per box.
5. When pair is finished, they share their problems with another pair and compare.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about subtraction? What does the word, “minus” mean and have to do with subtraction? What do the words difference and take away have to do with subtraction? Please write a number sentence that shows this story: Joe has 8 ice cream bars. Frank ate 3 of the ice cream bars. How many ice cream bars does Joe have left?

Content (the “Meat”)

Problem of the Day

Look at the following 4 problems. How many of them have the same sum? How do you know?

$$5 + 5 =$$

$$6 + 4 =$$

$$3 + 6 =$$

$$8 + 2 =$$

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 7, and 13.

Have students write the entire Fact Family on the white board.

$$6 + 7 = 13$$

$$7 + 6 = 13$$

$$13 - 6 = 7$$

$$13 - 7 = 6$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 6, 7, and 13.

Math Vocabulary

Word for Today: difference

Description: The term difference is the word we use to talk about the answer in an subtraction problem. When you subtract the numbers 9 - 6 you will have a difference of 3. This answer is the difference. Complete an entry for sum in your Vocabulary Notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">difference</p>	<p>My Description</p> <p style="text-align: center;">the answer when you subtract</p>
<p>Personal Connection</p> <p style="text-align: center;">The difference between 9 and 6 is three.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

Students will complete this notebook for each vocabulary word that they are given.

Activity Subtraction

Subtraction

Subtraction is a math operation that begins with a total number and then removes part of that total. The difference is what is left AFTER you have removed a certain number of objects. If you start with 9 happy faces and you remove 6 happy faces (the number being placed in the second box, the subtraction problem will tell you how many are left in the first box.

<div style="display: flex; justify-content: space-between;"> <div style="text-align: center;"> </div> <div style="text-align: center;"> </div> </div> <p style="text-align: center;">→</p> <div style="display: flex; justify-content: space-between;"> <div style="text-align: center;"> </div> <div style="text-align: center;"> </div> </div> <p style="text-align: center;">↓</p> <div style="text-align: center;"> </div>	<div style="text-align: center;"> </div> <p style="text-align: center;">→</p> <div style="text-align: center;"> </div>
--	--

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 8, 7 and 15.

Math Vocabulary

Word for today: subtraction

Description: The term subtraction refers to an operation in math where you start with a total and then take some of it away and then you find out how much you have left. Subtraction is the opposite of addition.

Have children complete the vocabulary notebook for the word context.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">subtraction</p>	<p>My Description</p> <p style="text-align: center;">taking something away from a total</p>
<p>Personal Connection</p> <p style="text-align: center;">I like to do subtraction problems.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Subtraction

Subtraction

Sometimes using a number line to subtract is helpful. Instead of moving forward, you would be moving backwards (or toward zero).

To work on a number line, you position your pencil or marker on the first number in the problem (the minuend). You then move toward the 0 the number of spaces indicated by the second number (the subtrahend), and the number you land on is the answer (the difference). It is important to give children the vocabulary to talk through the subtraction problem.

Draw a number line on the white board or chart paper that moves from 0 to 10. Using the number line, begin on the minuend, hop or move backwards the number indicated by the minuend, and then find the difference. Write the problem horizontally. Complete several problems with the students before having them work on their own.

What's My Number?

Directions:

1. Divide students into pairs.
2. Give each pair a number line and a set of What's My Number cards. Students will also need a white board.
3. Together, pair draws a What's My Number card and then uses the number line to

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

Subtraction is the reciprocal of addition. Instead of trying to find the total, you know the total and are trying to find the difference in the total if you remove several of the objects from the group.

Review several subtraction problems with the students. Have them write them on a white board while you write them on chart paper or a large white board. Work through the process, reminding students of the number line and the Post-Its.

Explain the today the subtraction problems will give them the clues they need to find an answer to a riddle.

Decoder Clues

Directions:

1. Divide students into pairs.
2. Give each pair a Decoder Clues problem sheet and white boards.
3. Working together, pairs complete each of the problems.
4. When the problems are completed, pair should take the letter of the problem and plug the letters into the riddle card.
5. If the problems were completed correctly, the answer to the riddle will be obvious. (Not all letters may be used in the answer).

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about today's lesson?

How can you use the information from today during class tomorrow?

What is one key learning you had today in math?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

4	13	4

0	9	10	11	1	3

2	11	12	6	0

Note: Do not give children then answer below.

Who's yellow and square and lives under the sea? Sponge Bob Square Pants

Consult 4 Kids Lesson Plans

correct response.

Today you will introduce this activity and begin with the Fact Family of 4, 8, and 12. Have students write the entire Fact Family on the white board.

$$4 + 8 = 12$$

$$8 + 4 = 12$$

$$12 - 4 = 8$$

$$12 - 8 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 4, 8 and 12. Ask students to give you examples of doubles. Ask students to tell how doubles are different than other fact families.

Math Vocabulary

Word for Today: difference

Description: The term difference is the word we use to describe the answer to a subtraction problem. The word is difference because it is very descriptive of the operation of subtraction. You start with a total, take some items away, and what you have left is the difference. Look at this problem: $7 - 5 = 2$. The difference is 2.

Review the entry in your Vocabulary Notebook for the word difference. Share it with a friend.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">difference</p>	<p>My Description</p> <p style="text-align: center;">In subtraction the amount you have left when you subtract</p>
<p>Personal Connection</p> <p style="text-align: center;">The difference of $12 - 4$ is 8. In other words, 12 is 4 more than 8 or 8 more than 4.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity Subtraction

Subtraction

Subtraction is a math operation that begins with a total number and then removes part of that total. The difference is what is left AFTER you have removed a certain number of objects. If you start with 9 happy faces and you remove 6 happy faces (the number being placed in the second box, the subtraction problem will tell you how many are left in the first box.

<div style="display: flex; justify-content: space-between;"> <div style="text-align: center;"> </div> <div style="text-align: center;"> </div> </div> <p style="text-align: center;">→</p> <div style="display: flex; justify-content: space-between;"> <div style="text-align: center;"> </div> <div style="text-align: center;"> </div> </div> <p style="text-align: center;">↓</p> <div style="display: flex; justify-content: space-between;"> <div style="text-align: center;"> </div> <div style="text-align: center;"> </div> </div>

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Focus Student's Prior Knowledge

What do you know about addition? What do you call an answer to an addition problem? How many numbers can you add together in an addition problem? (unlimited). What is the opposite of addition? When you add do you end up with more than you started with or less than you started with? Give an example of an addition problem.

Content (the "Meat")

Problem of the Day

Draw a clock to show what it looks like when you go to lunch at 11:30.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 5, 8 and 13.

Have students write the entire Fact Family on the white board.

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

<p> $5 + 8 = 13$ $8 + 5 = 13$ $13 - 8 = 5$ $13 - 5 = 8$ </p> <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 5, 8, and 13.</p>					
<p style="text-align: center;">Math Vocabulary</p> <p>Word for Today: addend</p> <p>Description: The term addend is a word that we use to describe the numbers that we add together in an addition problem. In the problem $5 + 6 = 11$, 5 and 6 are the addends. What are the addends in these two problems: $3 + 2 = 5$ or $6 + 3 = 9$.</p> <p>Have children review the Vocabulary notebook for the word addend.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 35%; padding: 5px;"> <p>New Word</p> <p style="text-align: center;">addend</p> </td> <td style="width: 65%; padding: 5px;"> <p>My Description</p> <p style="text-align: center;">The two or more numbers that you add together are the addends</p> </td> </tr> <tr> <td style="padding: 5px;"> <p>Personal Connection</p> <p style="text-align: center;">In the number sentence $6 + 4 = 10$, the 6 and the 4 are addends. State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

Ask children what they know about addition and subtraction. Ask them to share what they do to write number sentences?
 Ask them about story problems and how they connect to number sentences?

Content (the “Meat”)

Problem of the Day

Write a number sentence that has a sum of 8. Use picture, numbers, and words to show your thinking.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”. You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 7, 8, and 15.

Have students write the entire Fact Family on the white board.

$$7 + 8 = 15$$

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

$8 + 7 = 15$ $15 - 7 = 8$ $15 - 8 = 7$ Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 7, 8 and 15.	
<p style="text-align: center;">Activity</p> <p>Today is a review day. Students should select from the following list of activities:</p> <p>This Is The Sum What's The Difference? What's My Number? Decoder Clues Add 'Em Up</p>	<p>Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.</p>

$8 + 9 = 17$
 $17 - 9 = 8$
 $17 - 9 = 8$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 8, 9 and 17.

Math Vocabulary					
<p>Word for Today: minus</p> <p>Description: The term means subtraction. It is represented by the symbol -. This symbol lets you know that there is a total and that you are going to remove part of that total. In subtraction the answer will tell you the difference between what you started with and what you end up with after you have taken something away.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%; padding: 5px;"> <p>New Word</p> <p style="text-align: center;">minus</p> </td> <td style="padding: 5px;"> <p>My Description</p> <p style="text-align: center;">when you take something away you minus it</p> </td> </tr> <tr> <td style="padding: 5px;"> <p>Personal Connection</p> <p style="text-align: center;">It is easier to do a plus problem than a minus problem</p> </td> <td style="padding: 5px;"> <p>Drawing</p> <div style="text-align: center;">  </div> </td> </tr> </table>		<p>New Word</p> <p style="text-align: center;">minus</p>	<p>My Description</p> <p style="text-align: center;">when you take something away you minus it</p>	<p>Personal Connection</p> <p style="text-align: center;">It is easier to do a plus problem than a minus problem</p>	<p>Drawing</p> <div style="text-align: center;">  </div>
<p>New Word</p> <p style="text-align: center;">minus</p>	<p>My Description</p> <p style="text-align: center;">when you take something away you minus it</p>				
<p>Personal Connection</p> <p style="text-align: center;">It is easier to do a plus problem than a minus problem</p>	<p>Drawing</p> <div style="text-align: center;">  </div>				
<p>Students will complete this notebook for each vocabulary word that they are given.</p>					

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity	
<p>Subtraction</p> <p>Subtraction is a math process that starts with a total and then takes a specified amount away from the total and then finds the difference. When items are subtracted it does not mean that the items are necessarily destroyed, but it does mean that they are in another place, or eaten (if you are talking about cookies), etc.</p> <p>When you subtract it is important that students understand that the largest number is on the top as the subtrahend. The minuend tells you the amount you are going to reduce the total by. The difference is the end results.</p> <p>Work with students on subtraction problems by writing them on the board and talking them through it. You are going to subtract from a two digit number. Be certain that there is NO regrouping. Explain to students that they begin subtracting in the ones column, the column furthest to the right, and then work their way across to the left.</p> <p>Subtraction Directions:</p> <ol style="list-style-type: none"> 1. Divide students into pairs. 2. Give each pair a Subtraction Card, white boards and a Subtraction Game 	<p>Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.</p>

Opening
State the objective
Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.
Gain prior knowledge by asking students the following questions
When you add and subtract, there can be rules that will help you have a pattern. For example, if you have the numbers 3, 4, and 5, and the rule for the pattern is to add 6, you would end up with 9, 10, and 11. If the rule for the pattern is to subtract 1, you would end up with 2, 3, and 4.

Content (the “Meat”)	
Problem of the Day	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.</p>
<p>4 + 4 = 8 is a doubles fact. Write 3 other doubles</p>	
Fact Practice	
<p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> <p style="margin-left: 40px;">1 + 2 = 3 2 + 1 = 3 3 – 2 = 1 3 – 1 = 2</p> <p>After they have written the problem in all 4 ways they will find a partner and say, “If 1 + 2 = 3, then 2 + 1 = 3”.</p> <p>The other student will respond with “Yes, and since that is true, 3 – 1 = 2, and 3 – 2 = 1”.</p> <p>You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p>	

Consult 4 Kids Lesson Plans

Today you will introduce this activity and begin with the Fact Family of 4, 5, and 9
Have students write the entire Fact Family on the white board.

$$4 + 5 = 9$$

$$5 + 4 = 9$$

$$9 - 4 = 5$$

$$9 - 5 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 4, 5, and 9. Share with students that this fact is a double—the addends are the same.

Math Vocabulary

Word for Today: minus

Description: The term minus refers to the sign that indicates you need to subtract. It is a straight line. When you minus one number from another, you make the larger number less by the second number that you say after the word minus. We would read a math problem like this: 5 minus 3 equals 2. We would write it $5 - 3 = 2$

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">minus</p>	<p>My Description</p> <p style="text-align: center;">Minus means to make less by a certain number</p>
<p>Personal Connection</p> <p>I am 8 years old. My brother is 3. $8 - 3 = 5$, and I am 5 years older.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day
Complete the Vocabulary notebook for each word.
When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation)
Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book

Activity

Ins and Outs

Doing addition is like knowing that if you put something “in” and you apply a rule to it, you will have an “out” that creates a pattern. For example: if you put “in” the number 25 and you apply the rule “add 10”, then you will get 35 “out”. The reverse of this, subtraction, would be to start with an “out”, reverse the rule (if it says add 10 then you would reverse that to subtract 10) and you would have the amount that was put in to begin with.

Understanding this process helps students understand that addition and subtraction are reciprocal processes.

Work several problems on the board with students. Set them up in the same format as the problems that they will be doing in the exercise.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

When you add and subtract, there can be rules that will help you have a pattern. For example, if you have the numbers 3, 4, and 5, and the rule for the pattern is to add 6, you would end up with 9, 10, and 11. If the rule for the pattern is to subtract 1, you would end up with 2, 3, and 4. Do several examples of “ins and outs” on the board, inviting children to come to the board and complete the work.

Content (the “Meat”)

Problem of the Day

Look at the Venn Diagram below. If you want to write the letter V, where will you put it?
How do you know that you are correct?

straight lines curves

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

Consult 4 Kids Lesson Plans

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ". You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 5, 9 and 14. Have students write the entire Fact Family on the white board.

$$5 + 9 = 14$$

$$9 + 5 = 14$$

$$14 - 5 = 9$$

$$14 - 9 = 5$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 5, 9, and 14.

Math Vocabulary

Word for Today: difference

Description: The term difference is the word we use to talk about the answer in an subtraction problem. When you subtract the numbers $9 - 6$ you will have a difference of 3. This answer is the difference. Complete an entry for sum in your Vocabulary Notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">difference</p>	<p>My Description</p> <p style="text-align: center;">the answer when you subtract</p>
<p>Personal Connection</p> <p style="text-align: center;">The difference between 9 and 6 is three.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Ins and Outs

Doing addition is like knowing that if you put something "in" and you apply a rule to it, you will have an "out" that creates a pattern. For example: if you put "in" the number 25 and you apply the rule "add 10", then you will get 35 "out". The reverse of this, subtraction, would be to start with an "out", reverse the rule (if it says add 10 then you would reverse that to subtract 10) and you would have the amount that was put in to begin with.

Understanding this process helps students understand that addition and subtraction are reciprocal processes.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

Work several problems on the board with students. Set them up in the same format as the problems that they will be doing in the exercise.

In or Out #1

Directions:

1. Divide students into pairs.
2. Give each pair an In or Out Board, and white boards.
3. Working together, pair solves each of the In or Out Board problems.
4. When In or Out Board is complete, pair joins with another pair and shares answers.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

How can you use the information from today in school tomorrow?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

Focus:	Addition and Subtraction

Materials:	Activity at the end of this lesson plan
White boards	
Crayolas	
Socks (for erasers)	

Opening
State the objective
Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.
Gain prior knowledge by asking students the following questions
When you add and subtract, there can be rules that will help you have a pattern. For example, if you have the numbers 13, 15, and 17, and the rule is plus 5, you will end up with 18, 20 and 22. What would the answers be if you had the same rule and you started with number 19, 21, and 23. If the rule for the pattern is to subtract 8, and you began with 13, 15, and 17, what would you end up with? Do several other examples of “ins and outs” on the board, inviting children to come to the board and complete the work.

Content (the “Meat”)	
Problem of the Day	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.</p>
<p>There are two bags with marbles in them. Each bag has 6 marbles. How many marbles are there all together? Draw your answer.</p>	
Fact Practice	
<p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> <p style="margin-left: 20px;"> $1 + 2 = 3$ $2 + 1 = 3$ $3 - 2 = 1$ $3 - 1 = 2$ </p> <p>After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$”.</p> <p>The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$”.</p> <p>You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. Consult 4 Kids Lesson Plans

through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 9 and 15. Have students write the entire Fact Family on the white board.

$$6 + 9 = 15$$

$$9 + 6 = 15$$

$$15 - 6 = 9$$

$$15 - 9 = 6$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 6, 9 and 15.

Math Vocabulary

Word for today: subtraction

Description: The term subtraction refers to an operation in math where you start with a total and then take some of it away and then you find out how much you have left. Subtraction is the opposite of addition.

Have children complete the vocabulary notebook for the word context.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">subtraction</p>	<p>My Description</p> <p style="text-align: center;">taking something away from a total</p>
<p>Personal Connection</p> <p style="text-align: center;">I like to do subtraction problems.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Ins and Outs

Doing addition is like knowing that if you put something “in” and you apply a rule to it, you will have an “out” that creates a pattern. For example: if you put “in” the number 25 and you apply the rule “add 10”, then you will get 35 “out”. The reverse of this, subtraction, would be to start with an “out”, reverse the rule (if it says add 10 then you would reverse that to subtract 10) and you would have the amount that was put in to begin with.

Understanding this process helps students understand that addition and subtraction are reciprocal processes.

Work several problems on the board with students. Set them up in the same format as the problems they will be doing in the exercise.

In or Out #2

Directions:

1. Divide students into pairs.
2. Give each pair an In or Out Board, and white boards.
3. Working together, pair solves each of the In or Out Board problems.
4. When In or Out Board is complete, pair joins with another pair and shares answers.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

When you add and subtract, there can be rules that will help you have a pattern. For example, if you have the numbers 13, 15, and 17, and the rule is plus 10, you will end up with 23, 25, and 27. What would the answers be if you had the same rule and you started with number 19, 21, and 23. If the rule for the pattern is to subtract 2, and you began with 11, 13, 15, and 17, what would you end up with? Do several other examples of “ins and outs” on the board, inviting children to come to the board and complete the work.

Content (the “Meat”)

Problem of the Day

Look at the table below. The table shows how many cookies Martin ate each day. How many cookies do you think Martin will eat on Friday if he follows the pattern of the other days?

Day	M	T	W	Th	F
#	2	3	4	5	

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 7, 9 and 16. Have students write the entire Fact Family on the white board.

$$7 + 9 = 16$$

$$9 + 7 = 16$$

$$16 - 7 = 9$$

$$16 - 9 = 7$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 7, 9, and 16.

Math Vocabulary

Word for today: number sentence

Description: The term number sentence refers to the problem that we write that demonstrates the math for the story we read. A number sentence can look like this: $8 - 3 = 5$ is a number sentence. The story is this: Judy had 8 cookies. She gave 3 to her best friend. How many cookies does Judy have left. Write a number sentence for this story: Judy has 9 flowers. She gave 4 to her grandmother. How many flowers does she have left?

Review the entry in your Vocabulary Notebook for the word number sentence. Add anything that you think is important.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">number sentence</p>	<p>My Description</p> <p style="text-align: center;">Number sentences tell you how numbers are related</p>
<p>Personal Connection</p> <p style="text-align: center;">I had 8 pieces of candy. I gave my sister 2 pieces. Now I have 6 pieces left.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Ins and Outs

Doing addition is like knowing that if you put something "in" and you apply a rule to it, you will have an "out" that creates a pattern. For example: if you put "in" the number 25 and

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is

Consult 4 Kids Lesson Plans

you apply the rule “add 10”, then you will get 35 “out”. The reverse of this, subtraction, would be to start with an “out”, reverse the rule (if it says add 10 then you would reverse that to subtract 10) and you would have the amount that was put in to begin with.

Understanding this process helps students understand that addition and subtraction are reciprocal processes.

Work several problems on the board with students. Set them up in the same format as the problems they will be doing in the exercise.

In or Out #3

Directions:

1. Divide students into pairs.
2. Give each pair an In or Out Board, and white boards.
3. Working together, pair solves each of the In or Out Board problems.
4. When In or Out Board is complete, pair joins with another pair and shares answers.

Complete” center.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What would you like to do more of the next time we do math?

What are the different shapes that you made with the marshmallows and toothpicks

Where can you find those shapes in the world?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

Consult 4 Kids Lesson Plans

Component	Math
Grade Level:	First Grade
Lesson Title:	Puzzles
Focus:	Addition and Subtraction

Materials:	Activity at the end of this lesson plan
White boards	
Crayolas	
Socks (use as erasers)	

Opening
State the objective
Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.
Gain prior knowledge by asking students the following questions
What do you know about telling time? What is an analog clock? How many numbers are on the clock face? Name 5 different shapes. On your white board, draw those shapes. What number comes before 13? What number comes after?

Content (the “Meat”)	
Problem of the Day	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly.</p> <p>Check in about what is happening and what they are thinking.</p> <p>Take advantage of any teachable moments.</p> <p>Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.</p> <p>When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.</p>
Mr. Smith has 9 boys and 7 girls in his class. He has 16 soccer balls. Does Mr. Smith have enough soccer balls to have one for each student?	
Fact Practice	
<p>Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.</p> <p style="margin-left: 20px;">1 + 2 = 3</p> <p style="margin-left: 20px;">2 + 1 = 3</p> <p style="margin-left: 20px;">3 – 2 = 1</p> <p style="margin-left: 20px;">3 – 1 = 2</p> <p>After they have written the problem in all 4 ways they will find a partner and say, “If 1 + 2 = 3, then 2 + 1 = 3”.</p> <p>The other student will respond with “Yes, and since that is true, 3 – 1 = 2, and 3 – 2 = 1”.</p> <p>You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p> <p>Today you will introduce this activity and begin with the Fact Family of 8, 9 and 17. Have students write the entire Fact Family on the white board.</p>	

Consult 4 Kids Lesson Plans

$$8 + 9 = 17$$

$$9 + 8 = 17$$

$$17 - 8 = 9$$

$$17 - 9 = 8$$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 8, 9 and 17.

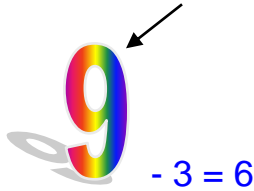

Math Vocabulary

Word for Today: minuend

Description: The term minuend is used to describe the total in a subtraction problem that you are subtracting from. In a number sentence, the minuend is the first number in the problem. In the problem, $6 - 2 = 4$, the 6 is the minuend.

Have children revisit the entry in the Vocabulary Notebook for the word **how many**.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">minuend</p>	<p>My Description</p> <p style="text-align: center;">the number you subtract from</p>
<p>Personal Connection</p> <p style="text-align: center;">In the number sentence $9 - 3 = 6$, 9 is the minuend.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity

Puzzles, Puzzles, Puzzles

Puzzles can give students an opportunity to practice a variety of math operations. The next several days, pairs of students will have the opportunity to practice a variety of skills that they are developing.

Review each of the Puzzles with the students (changing the numbers so they are not just redoing when they work in their pairs). Each puzzle sheet will have 5 parts. There will be something with addition, telling time, numbers in and out/ or before/after, geometry, and counting.

Puzzles #1

Directions:

1. Divide students into pairs.
2. Give each pair a Puzzle sheet inside a sheet protector or laminated.
3. Pair works together to solve the puzzles.
4. When puzzles are finished, pair finds another pair to share work with.
5. Activity is over when all puzzles have been solved.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Have students write the entire Fact Family on the white board.

$$7 + 7 = 14$$

$$7 + 7 = 14$$

$$14 - 7 = 7$$

$$14 - 7 = 7$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 7, 7 and 14. Ask students to give you examples of doubles. Ask students to tell how doubles are different than other fact families.

Math Vocabulary

Word for Today: difference

Description: The term difference is the word we use to describe the answer to a subtraction problem. The word is difference because it is very descriptive of the operation of subtraction. You start with a total, take some items away, and what you have left is the difference. Look at this problem: $7 - 5 = 2$. The difference is 2.

Review the entry in your Vocabulary Notebook for the word difference. Share it with a friend.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">difference</p>	<p>My Description</p> <p style="text-align: center;">In subtraction the amount you have left when you subtract</p>
<p>Personal Connection</p> <p style="text-align: center;">The difference of $12 - 4$ is 8. In other words, 12 is 4 more than 8 or 8 more than 4.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Focus Student's Prior Knowledge

What do you know about telling time? What is an analog clock? Draw one and show the time 3:00. How many numbers are on the clock face? Name 5 different shapes. On your white board, draw those shapes. What number comes before 41? What number comes after?

Content (the "Meat")

Problem of the Day

There are 4 nests and each nest has 2 eggs. How many eggs are there all together? Draw a picture.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$ ".

The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ".

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 8, 8 and 16. Have students write the entire Fact Family on the white board.

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

$$8 + 8 = 16$$

$$8 + 8 = 16$$

$$16 - 8 = 8$$

$$16 - 8 = 8$$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 8, 8, and 16.

Math Vocabulary

Word for Today: addend

Description: The term addend is a word that we use to describe the numbers that we add together in an addition problem. In the problem $5 + 6 = 11$, 5 and 6 are the addends. What are the addends in these two problems: $3 + 2 = 5$ or $6 + 3 = 9$.

Have children review the Vocabulary notebook for the word addend.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">addend</p>	<p>My Description</p> <p style="text-align: center;">The two or more numbers that you add together are the addends</p>
<p>Personal Connection</p> <p style="text-align: center;">In the number sentence $6 + 4 = 10$, the 6 and the 4 are addends. That is how old I am.</p>	<p>Drawing</p> <div style="text-align: center;"> </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity

Puzzles, Puzzles, Puzzles

Puzzles can give students an opportunity to practice a variety of math operations. The next several days, pairs of students will have the opportunity to practice a variety of skills that they are developing. Review each of the Puzzles with the students (changing the numbers so they are not just redoing when they work in their pairs). Each puzzle sheet will have 5 parts. There will be something with addition, telling time, numbers in and out/ or before/after, geometry, and counting.

Puzzles #3

Directions:

1. Divide students into pairs.
2. Give each pair a Puzzle sheet inside a sheet protector or laminated.
3. Pair works together to solve the puzzles.
4. When puzzles are finished, pair finds another pair to share work with.
5. Activity is over when all puzzles have been solved.

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 9, 9, and 18.

Have students write the entire Fact Family on the white board.

$$9 + 9 = 18$$

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

<p> $9 + 9 = 18$ $18 - 9 = 9$ $18 - 9 = 9$ </p> <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 9, 9, and 18.</p>					
<h3>Math Vocabulary</h3>	<p>It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.</p>				
<p>Word for today: plus</p> <p>Description: Plus is a term we use in a addition problem. It tells you to combine 2 or more amounts to find a total. When you plus something, you add things together. Plus is a word that means adding something.</p> <p>Review the entry for the word plus that is in your Vocabulary notebook.</p> <p>Vocabulary Notebook Sample:</p>	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%; padding: 5px; text-align: center;"> New Word plus </td> <td style="padding: 5px; text-align: center;"> My Description plus means to add together </td> </tr> <tr> <td style="padding: 5px;"> Personal Connection For my collection I have 3 stamps plus the 2 new ones I got today. </td> <td style="padding: 5px; text-align: center;"> Drawing </td> </tr> </table>	New Word plus	My Description plus means to add together	Personal Connection For my collection I have 3 stamps plus the 2 new ones I got today. Math Vocabulary

Word for Today: compare

Description: The term compare means to look at two or more numbers and determine if they are equal, larger, or smaller. Compare is an action that identifies the relationship between numbers. We use symbols to make these comparisons: < less than, > greater than, and = equal.

Create an entry for the term “compare” in your Vocabulary Notebook. Share with a peer.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">compare</p>	<p>My Description</p> <p style="text-align: center;">say how numbers are related</p>
<p>Personal Connection</p> <p style="text-align: center;">7 > 3.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

Activity

Greater Than or Less Than

It is important for children to be able to compare numbers, knowing which one is larger, which is smaller, and when numbers are equal.

There are symbols to represent greater than > and less than <. Sometimes this symbol is called the alligator, and people can identify the largest number because the mouth is open to the largest number.

When reading the comparison you begin with the number on the left and tell whether it is greater than or less than the second number.

Practice several comparisons on the board with the children. Be sure to talk through what you are thinking so that they can hear how you are thinking about the problem. Be sure that you read the comparison aloud after you have made it.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

Greater Than or Less Than

Directions:

1. Deal each player 5 of the number cards.
2. Place the remainder of the cards face down on the board.
3. Place the $<$ $>$ cards face down next to the cards.
4. Turn up the first card. This is the “comparison number”
5. Player draws a $<$ or $>$ card and must play a number from his/her hand that is $<$ or $>$ the beginning number. If player can play a number, the next player repeats the steps, but the number the first player played is now the “comparison number”. If the player can not play, then he/she must draw a card.
6. First player to play all of his/her cards, wins.

Component	Math
Grade Level:	First Grade
Lesson Title:	Adding and Subtracting
Focus:	Addition and Subtraction

Materials:	White boards	Activity at the end of the lesson plan
	Crayolas	
	Socks	

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about addition? What do you know about subtraction? What are the words we use to describe the answers in an addition problem? What are the words we use to describe the answers in a subtraction problem? Write several addition and subtraction problems on the board. Ask children to come to the board and solve the problems.

Content (the “Meat”)

Problem of the Day

Look at the number sentence below. Is it correct? How do you know?

$$5 + 9 = 13$$

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day.

Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

correct response.

Today you will introduce this activity and begin with the Fact Family of 5, 6, and 11. Have students write the entire Fact Family on the white board.

$$5 + 6 = 11$$

$$6 + 5 = 11$$

$$11 - 5 = 6$$

$$11 - 6 = 5$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 5, 6, and 11. Share with students that this fact is a double—the addends are the same.

Math Vocabulary

Word for Today: minus

Description: The term minus refers to the sign that indicates you need to subtract. It is a straight line. When you minus one number from another, you make the larger number less by the second number that you say after the word minus. We would read a math problem like this: 5 minus 3 equals 2. We would write it $5 - 3 = 2$

Have children complete the Vocabulary notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">minus</p>	<p>My Description</p> <p style="text-align: center;">Minus means to make less by a certain number</p>
<p>Personal Connection</p> <p>I am 8 years old. My brother is 3. $8 - 3 = 5$, and I am 5 years older.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity

Addition and Subtraction

Addition and Subtraction are reciprocal operations. Addition is the mathematical operation of combining to groups and finding the sum. Subtraction is the mathematical operation that begins with a total, removes a part of the total, and determines the difference.

Write several addition and subtraction problems on the board and work them through with the children. Be sure to talk about what you are thinking and share with them the correct terms to use as they solve the problems.

Addition or Subtraction

Directions:

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 7, and 13. Have students write the entire Fact Family on the white board.

$$6 + 7 = 13$$

$$7 + 6 = 13$$

$$13 - 6 = 7$$

$$13 - 7 = 6$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 6, 7, and 13.

Math Vocabulary

Word for Today: difference

Description: The term difference is the word we use to talk about the answer in an subtraction problem. When you subtract the numbers 9 - 6 you will have a difference of 3. This answer is the difference. Complete an entry for sum in your Vocabulary Notebook.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">difference</p>	<p>My Description</p> <p style="text-align: center;">the answer when you subtract</p>
<p>Personal Connection</p> <p style="text-align: center;">The difference between 9 and 6 is three.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$1 + 2 = 3$
 $2 + 1 = 3$
 $3 - 2 = 1$

***Activity → Teachable Moment(s) throughout**

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

<p style="text-align: center;">$3 - 1 = 2$</p> <p>After they have written the problem in all 4 ways they will find a partner and say, "If $1 + 2 = 3$, then $2 + 1 = 3$".</p> <p>The other student will respond with "Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$".</p> <p>You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.</p> <p>Today you will introduce this activity and begin with the Fact Family of 6, 8, and 14. Have students write the entire Fact Family on the white board.</p> <p style="margin-left: 20px;">$6 + 8 = 14$ $8 + 6 = 14$ $14 - 6 = 8$ $14 - 8 = 6$</p> <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 6, 8, and 14.</p>					
<p style="text-align: center;">Math Vocabulary</p> <p>Word for today: even</p> <p>Description: The term even refers to a number that is said when you are counting by 2s. An even number can be divided by two and have equal shares. Even numbers include numbers that end in the digits 0, 2, 4, 6, or 8.</p> <p>Have children complete the vocabulary notebook for the word context.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse; margin-top: 10px;"> <tr> <td style="width: 50%; padding: 5px; text-align: center;"> New Word even </td> <td style="width: 50%; padding: 5px; text-align: center;"> My Description 2, 4, 6, 8, and 0 are even </td> </tr> <tr> <td style="width: 50%; padding: 5px; text-align: center;"> Personal Connection 10 is an even number. </td> <td style="width: 50%; padding: 5px; text-align: center;"> Drawing  </td> </tr> </table>	New Word even	My Description 2, 4, 6, 8, and 0 are even	Personal Connection 10 is an even number. Consult 4 Kids Lesson Plans

through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 6, 9 and 15.

Have students write the entire Fact Family on the white board.

$$6 + 9 = 15$$

$$9 + 6 = 15$$

$$15 - 6 = 9$$

$$15 - 9 = 6$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 6, 9, and 15.

Math Vocabulary

Word for today: odd

Description: The term odd refers to a number that is not said when you are counting by 2s. An odd number when divided by two will not have equal shares. Odd numbers include numbers that end in the digits 1, 3, 5, 7, and 9.

Have children complete the vocabulary notebook for the word context.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">odd</p>	<p>My Description</p> <p style="text-align: center;">1, 3, 5, 7, and 9 are odd</p>
<p>Personal Connection</p> <p style="text-align: center;">7 is an odd number.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Number

Odd, Even, More, Less

Knowing whether a number is odd or even is important. An odd number is one that is **NOT** said when you count by 2s. Odd numbers include: 1, 3, 5, 7, 9, 11, 13, 15, 17, 19 and 21.

Even numbers are the numbers that you say when you count by 2s. Even numbers include 2, 4, 6, 8, 10, 12, 14, 16, 18, 20, and 22.

Other terms that are important to understand are the words more and less. Knowing whether something is 1 more, 1 less, 10 more, 10 less, and so on, helps students become more familiar with numbers.

Demonstrate several of odd, even, more, less numbers on the board. Have children talk about how they have determined whether the number is odd, even, more or less.

Odd, Even, More, Less

Directions:

1. Divide students into pairs.
2. Give each pair a deck of Odd, Even, More, Less cards.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What are some of the math terms that we use when we talk about math? Make a list of those words. Encourage children to look in their Vocabulary Notebook. What are some of the words that tell us position? (right, left, up, down, between, over, under). Ask children to stand up and act out those words.

Content (the “Meat”)

Problem of the Day

Lisa has one blue shirt and one red shirt. She has 1 green skirt and 1 yellow skirt. How many different outfits can she wear? Draw a picture of your answer.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”. You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 4, 5, and 9.

***Activity → Teachable Moment(s) throughout**

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

Have students write the entire Fact Family on the white board.

$$4 + 5 = 9$$

$$5 + 4 = 9$$

$$9 - 4 = 5$$

$$9 - 5 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 4, 5, and 9. Ask students to give you examples of doubles. Ask students to tell how doubles are different than other fact families.

Math Vocabulary

Word for Today: term

Description: The word “term” refers to words that have a particular meaning in mathematics. For example, the word “carry” means to hold something in your arms. In math it means to move tens to the left if a sum is 10 or over. Other terms are positional like over, under, right, left, between, and so on.

Have children make an entry in the Vocabulary Notebook for the word **term**.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">term</p>	<p>My Description</p> <p style="text-align: center;">a word that describes math</p>
<p>Personal Connection</p> <p style="text-align: center;">What does the term “over” mean?</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from ½ of a composition book.

Activity Math Terms

Making Sense of Key Terms

There are some key terms that 1st graders need to understand. Some of those terms are: near, far, below, above, up, down, behind, in front of, next to, left, right. In order to ensure that children understand these concepts it is important that they practice.

Today you are going to give the children a grid and then you are going to make statements and ask them to draw or write the symbol that answers the question.

Practice with the children first by reviewing the terms above and also illustrating things on the board and asking them questions about those pictures.

Divide students into pairs and give each pair a grid and crayons.

The questions to ask the children are attached to this lesson plan.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

New Word	My Description								
time	seconds, minutes, hours, days, weeks, months, and years								
Personal Connection	Drawing								
What time is it?									
<p style="text-align: center;">Activity Time</p> <p>Measuring Time</p> <p>There are two kinds of clocks. One is the analog clock. It looks like a circle and has numbers 1-12 around the edge of the circle. It has two hands, an hour hand that points to the hour and a minute hand that points to the minutes. The minute hand is longer than the hour hand. When the minute hand points to the 12, we say the number that the hour hand is pointing to and then say “o’clock”. For instance, if the hour hand is pointing to the four and the minute hand is pointing to the 12, we would say four o’clock, 4:00. When the minute hand is pointing to the six, we look at the hour hand, say that number and then follow by the word thirty. When the minute hand is pointing to the 6 it means that it is 30 minutes after the hour. So if the minute hand is at the 6 while the hour hand is at the four, we would say, four thirty, 4:30. It is expected that 1st graders would be able to tell time on an analog clock to the hour and the half hour or 30 minutes.</p> <p>The second kind of clock is a digital clock. A digital clock is usually a rectangular shape. The hour is the first number written. It is followed by a colon (:), and then the information about the minutes. The time is written 4:00 or 4:30.</p> <p>(Draw several clocks on the board or chart paper and decide what time the clock is indicating. Practice until the children are comfortable telling time.</p>	<p>Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.</p>

What Time Is It?

Directions:

1. Divide students into pairs.
2. Give each pair a set of What Time Is It cards.
3. Shuffle the cards and place the 20 cards face down in a 5 by 4 grid.
4. Player 1 turns over two cards, trying to match an analog and digital clock with the same time.
5. If player is successful, he/she keeps the cards. If not successful, he/she returns the cards to the spot they were in, placing them face down.
6. Game is over when all of the cards have been collected.

Closing

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about telling time? What is an analog clock? Draw one and show the time 3:00. How many numbers are on the clock face? How do you write time?

Content (the “Meat”)

Problem of the Day

There are 17 boys and 11 girls in Mrs. Jones’ class. How many students are in the class all together? How many more boys than girls?

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 5, 6, and 11.

Have students write the entire Fact Family on the white board.

$$5 + 6 = 11$$

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

$$6 + 5 = 11$$

$$11 - 5 = 6$$

$$11 - 6 = 5$$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 5, 6 and 11.

Math Vocabulary

Word for Today: time

Description: The term time refers to a way we measure seconds, minutes, hours, days, weeks, months, and years. Time is usually measured by a clock or a watch. Time can be on an analog clock (round face with 12 numbers), or a digital clock (5:30). We also use calendars. Before clocks, people used the sun.

Have children review the Vocabulary notebook for the word time.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">time</p>	<p>My Description</p> <p style="text-align: center;">seconds, minutes, hours, days, weeks, months, and years</p>
<p>Personal Connection</p> <p style="text-align: center;">What time is it?</p>	<p>Drawing</p> <div style="text-align: center; border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;"> <p>4:30</p> </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Time

Measuring Time

There are two kinds of clocks. One is the analog clock. It looks like a circle and has numbers 1-12 around the edge of the circle. It has two hands, an hour hand that points to the hour and a minute hand that points to the minutes. The minute hand is longer than the hour hand. When the minute hand points to the 12, we say the number that the hour hand is pointing to and then say "o'clock". For instance, if the hour hand is pointing to the four and the minute hand is pointing to the 12, we would say four o'clock, 4:00. When the minute hand is pointing to the six, we look at the hour hand, say that number and then follow by the word thirty. When the minute hand is pointing to the 6 it means that it is 30 minutes after the hour. So if the minute hand is at the 6 while the hour hand is at the four, we would say, four thirty, 4:30. It is expected that 1st graders would be able to tell time on an analog clock to the hour and the half hour or 30 minutes.

The second kind of clock is a digital clock. A digital clock is usually a rectangular shape. The hour is the first number written. It is followed by a colon (:), and then the information about the minutes. The time is written 4:00 or 4:30.

(
 Draw several clocks on the board or chart paper and decide what time the clock is indicating. Practice until the children are comfortable telling time.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Math Vocabulary

Word for Today: coins

Description: The term coin refers to the pennies, nickels, dimes, and quarters that we use. These coins can equal a dollar. There are 100 pennies in \$1.00. There are 20 nickels in \$1.00. There are 10 dimes in \$1.00. There are 4 quarters in \$1.00. There are other comparisons that we need to be able to make. Pennies to nickels and dimes, ways to make \$.25, and so on.

Review the entry for the term “coin” in your Vocabulary Notebook. Share with a peer.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">coin</p>	<p>My Description</p> <p style="text-align: center;">penny, nickel, dime and quarter</p>
<p>Personal Connection</p> <p style="text-align: center;">I have 25¢ in my pocket.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from ½ of a composition book.

Activity Money

Money Review

During the year we have looked at the different coins we have in America. We have four main coins: penny, nickel, dime, and quarter. A penny is worth 1 cent, a nickel worth 5 cents, a dime worth 10 cents and a quarter worth 25 cents. We can note money that is less than a dollar by using the cent sign: ¢, or by writing the amount as a part of a dollar: \$.**.

When calculating the value of a group of coins, start with the value of the largest coin and then work your way down to the smallest. For example, if you have a quarter, dime, three nickels and 2 pennies, you would start with 25¢, add 10¢ to make 35¢ (this is like counting by tens), then you would count by 5s for the three nickels: beginning at 35¢, 1 nickel would make 40¢, a second nickel 45¢, the third nickel 50¢, and then you would

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

count 2 additional pennies, saying 51¢ and finally 52¢. Practice counting coins in this way until the children are comfortable counting the coins.

Then reverse the process, writing the total and then asking children to start with the largest coin, and keep adding coins until they reach the total. For example if the total is 79¢, you would start with a quarter for 25¢, a second quarter for 50¢, and finally a third quarter for 75¢, and then 4 pennies to reach 79¢. Demonstrate how you would draw the coins by making circles and putting the coin value inside.

Name Those Coins

Directions:

1. Divide students into pairs.
2. Give each pair a Name Those Coins card and a piece of paper.
3. Ask students to fold the paper so they have 16 rectangles.
4. Working together, students will look at the amount of money and then draw that amount on the paper, using as few coins as possible.
5. When pair is finished, pair should meet with another group and compare work.

 Remember that today they are only doing the Fact Family of 6, 6 and 12.

Math Vocabulary

Word for Today: fraction

Description: The fraction represents less than a whole. The bottom number, the denominator, tells you how many pieces there are if you had the whole thing. The top number, the numerator, tells you how many of the total number of pieces you have. If you have the fraction $\frac{3}{4}$, it means that you have 3 of the 4 pieces the whole thing was divided into.

Create an entry for the term “fraction” in your Vocabulary Notebook. Share with a peer.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">fraction</p>	<p>My Description</p> <p style="text-align: center;">two numbers, one on top of the other, that indicate less than a whole item</p>
<p>Personal Connection</p> <p style="text-align: center;">I will each $\frac{1}{2}$ of a sandwich for lunch.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity Fractions

Fractions

A fraction is a way to represent a part of a whole. For example, when you eat a sandwich, it has probably been cut in half and you eat $\frac{1}{2}$ at a time. Sometimes you need to divide a cookie between you and your friend and you each end up with $\frac{1}{2}$. If you get pizza, you don't usually eat the whole pizza, and most pizzas are divided into 8 pieces, so each piece you eat is $\frac{1}{8}$ of the whole pizza.

Fractions have two numbers. The bottom number tells you how many pieces you have divided the whole thing into (2 pieces of cookie, 8 pieces of pizza), and the top number tells you how much of the whole thing, or the number of pieces that you have. If you have $\frac{1}{2}$ of a cookie, you have one of the two pieces. If you eat 3 pieces of pizza, you have $\frac{3}{8}$ of the pizza—three of the eight pieces in a whole pizza.

Work through several problems with children. Use a denominator of 1, 2, 3, 4, or 8 only. When students are comfortable identifying and writing the fractions represented, they are ready to play the game below.

How Many Pieces?

Directions:

1. Divide students into pairs.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

What do you know about fractions? What does the top number represent? How about the bottom number? If you have $\frac{3}{4}$ you have 3 of the 4 pieces you would have if you had a whole thing. What are some other common fractions that you know?

Content (the “Meat”)

Problem of the Day

The sun sets in the west every day. Is it likely that the sun will set in the west today?
Explain your thinking.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 3, 4, and 7.

***Activity → Teachable Moment(s) throughout**

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

Have students write the entire Fact Family on the white board.

$$3 + 4 = 7$$

$$4 + 3 = 7$$

$$7 - 4 = 3$$

$$7 - 3 = 4$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 3, 4, and 7.

Math Vocabulary

Word for Today: fraction

Description: The fraction represents less than a whole. The bottom number, the denominator, tells you how many pieces there are if you had the whole thing. The top number, the numerator, tells you how many of the total number of pieces you have. If you have the fraction $\frac{3}{4}$, it means that you have 3 of the 4 pieces the whole thing was divided into.

Create an entry for the term “fraction” in your Vocabulary Notebook. Share with a peer.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">fraction</p>	<p>My Description</p> <p style="text-align: center;">two numbers, one on top of the other, that indicate less than a whole item</p>
<p>Personal Connection</p> <p style="text-align: center;">I will each $\frac{1}{2}$ of a sandwich for lunch.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

Students will complete this notebook for each vocabulary word that they are given.

Activity Fractions

Fractions

A fraction is a way to represent a part of a whole. For example, when you eat a sandwich, it has probably been cut in half and you eat $\frac{1}{2}$ at a time. Sometimes you need to divide a cookie between you and your friend and you each end up with $\frac{1}{2}$. If you get pizza, you don't usually eat the whole pizza, and most pizzas are divided into 8 pieces, so each piece you eat is $\frac{1}{8}$ of the whole pizza.

Fractions have two numbers. The bottom number tells you how many pieces you have divided the whole thing into (2 pieces of cookie, 8 pieces of pizza), and the top number tells you how much of the whole thing, or the number of pieces that you have. If you have $\frac{1}{2}$ of a cookie, you have one of the two pieces. If you eat 3 pieces of pizza, you have $\frac{3}{8}$ of the pizza—three of the eight pieces in a whole pizza.

Work through several problems with children. Use a denominator of 1, 2, 3, 4, or 8 only.

When students are comfortable identifying and writing the fractions represented, they are ready to play the game below.

How Many Pieces?

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

Directions:

1. Divide students into pairs.
2. Give each pair a How Many Pieces card and either a white board or paper.
3. Working together the pair will identify a fraction to explain the drawing, or draw a picture to explain the fraction.
4. When paid is finished, they should join another pair and compare the work they have done as well as the key learning.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

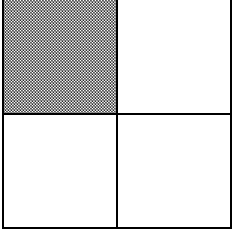

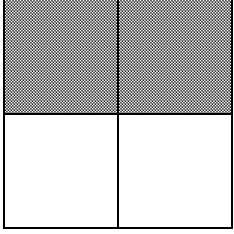

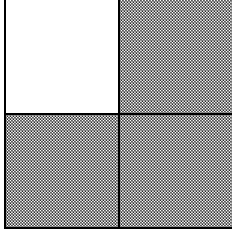

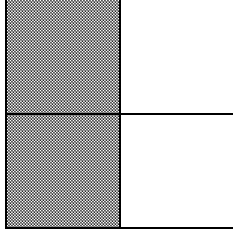

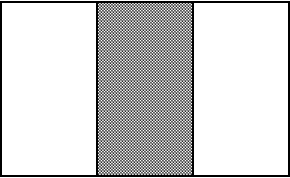

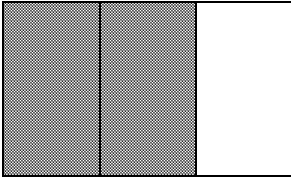

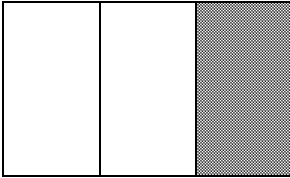

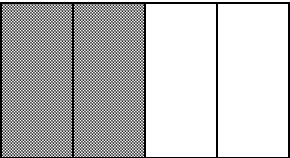

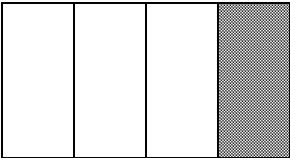

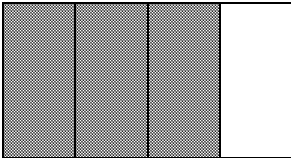

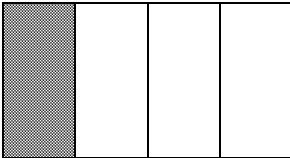

How can you use the information from today in school tomorrow?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

Math Vocabulary

Word for today: graph

Description: The term graph refers to a diagram of value that is in either lines or bars. You collect information and data and then share it with others through this diagram. Graphs are used to make information clear to everyone.

Have children complete the vocabulary notebook for the word graph.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">graph</p>	<p>My Description</p> <p style="text-align: center;">a chart that shows values of certain items</p>
<p>Personal Connection</p> <p style="text-align: center;">I made a graph to show how many people like raisins.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Graphs

A graph is a diagram that usually shows values as lines or bars. By looking at a graph we can quickly understand information.

Graph several things with the students, creating the graph as you go. The first graph should be the age of the students. You could possibly have 3 different ages. Ask students to stand in a line that represents the age they currently are. Have each child come up and draw a face on the graph under their age. Then compare the data that the graph shows. The second graph you can make with children is to have them stand in a line based on the month they were born. Repeat the process that you did for age.

Explain that today they are going to graph Gummy Bears. Each pair will be given a number of Gummy Bears and that they will need to graph them. Discuss how they might graph the bears (probably the attribute of color will be the best choice). After you have explained the activity, students are ready to work on the activity.

Gummy Bears

Directions:

1. Divide students into pairs.
2. Give each pair a cup or package of Gummy Bears, a piece of paper and a box of crayons.
3. Ask each pair to work together to create a graph that they can share with other

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.)

They will write the problem in four ways.

- $1 + 2 = 3$
- $2 + 1 = 3$
- $3 - 2 = 1$
- $3 - 1 = 2$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”.

Consult 4 Kids Lesson Plans

You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 3, 7, and 10.

Have students write the entire Fact Family on the white board.

$$3 + 7 = 10$$

$$7 + 3 = 10$$

$$10 - 3 = 7$$

$$10 - 7 = 3$$

Bring two students up to practice the conversation.

Try it again with several other pairs of students.

Then have children find a partner and practice the conversation. Do this at least 4 times.

Remember that today they are only doing the Fact Family of 3, 7, and 10.

Math Vocabulary

Word for Today: word problems

Description: Math problems tell a story. Because we practice so often with just number sentences, $5 + 3 = 8$, we forget that there is a story that caused the number sentence to be written in the way that it is. When we read a story, it is important to pay attention to the key words in the story so we know how to craft the number sentence.

Have children make an entry in the Vocabulary Notebook for the term **word problems**.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">word problems</p>	<p>My Description</p> <p style="text-align: center;">the story that informs the number sentence</p>
<p>Personal Connection</p> <p style="text-align: center;">The word problem said to add 3 cookies and 5 cookies.</p>	<p>Drawing</p> <div style="text-align: center;">  <p>1 rose + 1 rose = 2 roses</p> </div>

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Word Problems

Most of the time math problems don't come in the format of numbers only. They come in the form of real-life problems that need to be answered. These problems are found in word problems. When students read the problems they must ask themselves what they are trying to find out. They then create a number sentence that represents the words. For example:

1. Joe has 8 cookies. Mark has 5 cookies. How many cookies do they have in all?

2. 8 cookies + 5 cookies = 13 cookies in all

The first is the problem, the second the number sentence representing the problem.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

Sometimes you are given a number sentence and then are asking to create the story that goes along with the sentence.

Work through several examples with students, going from number sentence to story, and story to number sentence.

Word Problems

Directions:

1. Divide students into pairs.
2. Give each pair a Word Problem card and white board.
3. Working together, students create number sentences from the word problems, and word problems from the number sentences.
4. When pairs are finished, pair shares with another pair to see what each group has done.
5. Bring group together and have children share several of the stories they have developed to explain the number sentence.

Closing

The first is the problem, the second the number sentence representing the problem.

Sometimes you are given a number sentence and then are asking to create the story that goes along with the sentence.

Work through several examples with students, going from number sentence to story, and

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Consult 4 Kids Lesson Plans

story to number sentence.

Word Problems

Directions:

1. Divide students into pairs.
2. Give each pair a Word Problem card and white board.
3. Working together, students create number sentences from the word problems, and word problems from the number sentences.
4. When pairs are finished, pair shares with another pair to see what each group has done.
5. Bring group together and have children share several of the stories they have developed to explain the number sentence.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What would you like to do more of the next time we do math?

Give an example of how you will use what we did today in school tomorrow.

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

1st Grade Word Problems

<p>A green string is 8 inches long. A blue string is 4 inches long. If you put the strings together, how long will it be?</p>	<p>It's lunch time. There are 12 students sitting at the green table and 21 students at the purple table. How many students are there all together?</p>
<p>You are in the library. There are 13 books on the top shelf and 25 books on the bottom shelf. How many books all together?</p>	<p>Lily had 38 cookies to take to school. She gave away 13 cookies before she got to school. How many cookies did she have when she got to school?</p>
<p>There are 11 cats sitting on the step. 5 cats get up and walk away. How many cats are left sitting on the step?</p>	<p>Joe read 18 books. Robin read 11 books. How many books did they read together?</p>
<p>$8 + 7 = 15$</p>	<p>$9 + 12 = 21$</p>
<p>$4 + 3 = 7$</p>	<p>$37 - 12 = 25$</p>
<p>$18 - 6 = 12$</p>	<p>$57 - 34 =$</p>

Consult 4 Kids Lesson Plans

$$3 + 9 = 12$$

$$9 + 3 = 12$$

$$12 - 3 = 9$$

$$12 - 9 = 3$$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 3, 9, and 12.

Math Vocabulary

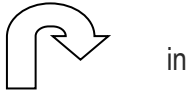

Concept for Today: in and out

Description: The concept “in and out” refers to the pattern that applies a rule to a series of numbers. The “in” refers to the rule that you will apply to each of the numbers listed. The “out” refers to the answer or the end result. Try this “in” + 2.

In	3	4	5
Out	5		

Have children review the Vocabulary notebook for the concept of “in and out”.

Vocabulary Notebook Sample:

New Word <div style="text-align: center; padding: 10px;">in and out</div>	My Description <table border="1" style="width: 100%; border-collapse: collapse; text-align: center; margin: 5px auto;"> <tr> <td style="width: 25%;">In</td> <td style="width: 25%;">3</td> <td style="width: 25%;">4</td> <td style="width: 25%;">5</td> </tr> <tr> <td>Out</td> <td>5</td> <td></td> <td></td> </tr> </table>	In	3	4	5	Out	5		
In	3	4	5						
Out	5								
Personal Connection <div style="text-align: center; padding: 10px;">Can you apply the in and out pattern?</div>	Drawing <div style="text-align: center; padding: 10px;">  </div>								

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Operations

In and Out Puzzles

We can find patterns in numbers. For example, if a “rule” is to add 2, there is a pattern to how numbers will progress.

For example if the rule is to add 2, look at the number in and determine the number out:

In	3	4	5
Out		6	

If the rule was add 2 and you only had the “out number”, you would have to subtract the 2 so you could find the number you started with.

In	3		
Out	5	6	7

Work through several examples of “in” and “out” puzzles. When students are comfortable the students will be ready to work on the activity alone.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

In and Out

Directions:

1. Divide students into pairs.
2. Give each pair an In and Out card and a white board or paper.
3. Working together, pair completes each of the In and Out puzzles.
4. When pair is finished, they should join another pair and compare the work that they did.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

If you put 6 in and you already have 2, what will come out?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them.

$$8 + 11 = 19$$

$$11 + 8 = 19$$

$$19 - 8 = 11$$

$$19 - 11 = 8$$

Bring two students up to practice the conversation.
 Try it again with several other pairs of students.
 Then have children find a partner and practice the conversation. Do this at least 4 times.
 Remember that today they are only doing the Fact Family of 8, 11, 19.

Math Vocabulary

Concept for Today: in and out

Description: The concept “in and out” refers to the pattern that applies a rule to a series of numbers. The “in” refers to the rule that you will apply to each of the numbers listed. The “out” refers to the answer or the end result. Try this “in” + 2.

In	3	4	5
Out	5		

Have children review the Vocabulary notebook for the concept of “in and out”.

Vocabulary Notebook Sample:

New Word <div style="text-align: center; padding: 10px;">in and out</div>	My Description <table border="1" style="width: 100%; border-collapse: collapse; text-align: center; margin: 5px auto;"> <tr> <td style="padding: 2px;">In</td> <td style="padding: 2px;">3</td> <td style="padding: 2px;">4</td> <td style="padding: 2px;">5</td> </tr> <tr> <td style="padding: 2px;">Out</td> <td style="padding: 2px;">5</td> <td style="padding: 2px;"></td> <td style="padding: 2px;"></td> </tr> </table>	In	3	4	5	Out	5		
In	3	4	5						
Out	5								
Personal Connection Can you apply the in and out pattern?	Drawing <div style="text-align: center;">  </div>								

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity Operations

In and Out Puzzles

We can find patterns in numbers. For example, if a “rule” is to add 2, there is a pattern to how numbers will progress.

For example if the rule is to add 2, look at the number in and determine the number out:

In	3	4	5
Out		6	

If the rule was add 2 and you only had the “out number”, you would have to subtract the 2 so you could find the number you started with.

In	3		
Out	5	6	7

Work through several examples of “in” and “out” puzzles. When students are comfortable the students will be ready to work on the activity alone.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Consult 4 Kids Lesson Plans

In and Out

Directions:

1. Divide students into pairs.
2. Give each pair an In and Out card and a white board or paper.
3. Working together, pair completes each of the In and Out puzzles.
4. When pair is finished, they should join another pair and compare the work that they did.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

What did you like about what we did today in math?

What do you know about a calendar?

What are the names of the month?

What are the names of the days of the week?

Reflection (Confirm, Tweak, Aha!)

- Ask students to think about what they did today in math.
- Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
- Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
- Ask them to comment on something (if anything) they have learned today that was brand new to them.

Component	Math
Grade Level:	First Grade
Lesson Title:	Math Fun!
Focus:	Review

Materials:

White boards Materials for games played the past 10 days
 Crayolas
 Socks (use for erasers)

Opening

State the objective

Today we are going to learn some math vocabulary—words that we need to use when we talk about addition and subtraction. We are also going to practice some of the math skills that we will need to be excellent at math.

Gain prior knowledge by asking students the following questions

Ask children what they know about addition and subtraction. Ask them to share what they do to write number sentences?
 Ask them about story problems and how they connect to number sentences?

Content (the “Meat”)

Problem of the Day

You want to go to your grandma’s house. She lives 5 miles away. Would it be faster to ride your bike or walk? Explain your thinking.

Fact Practice

Fact Practice for 1st grade is looking at number families, so you are looking at both addition and subtraction. The key is for children to learn that numbers have a relationship with one another in adding and subtracting. Fact practice will follow this pattern every day. Children will look at the math family. (We will begin with 1 more, then 2 more, etc.) They will write the problem in four ways.

$$1 + 2 = 3$$

$$2 + 1 = 3$$

$$3 - 2 = 1$$

$$3 - 1 = 2$$

After they have written the problem in all 4 ways they will find a partner and say, “If $1 + 2 = 3$, then $2 + 1 = 3$ ”.

The other student will respond with “Yes, and since that is true, $3 - 1 = 2$, and $3 - 2 = 1$ ”. You should have them practice this conversation (exactly as it is written) with 3-5 other students every day. On the 5th day, you will utilize all 4 problems from the days before, and the conversation will follow the pattern, but the second responder will need to quickly look through his/her cards (of course we hope they remember without looking) and gives the correct response.

Today you will introduce this activity and begin with the Fact Family of 2, 9 and 11.

Have students write the entire Fact Family on the white board.

$$2 + 9 = 11$$

*Activity → Teachable Moment(s) throughout

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

$9 + 2 = 11$ $11 - 2 = 9$ $11 - 9 = 2$ <p>Bring two students up to practice the conversation. Try it again with several other pairs of students. Then have children find a partner and practice the conversation. Do this at least 4 times. Remember that today they are only doing the Fact Family of 2, 9, and 11.</p>	
<p style="text-align: center;">Activity</p> <p>Today is a review lesson. Students should choose from the following activities:</p> <ul style="list-style-type: none"> Name Those Coins How Many Pieces? Gummy Bears Lucky Charms Word Problems In and Out 	<p>Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.</p>

Closing
Review
<p>Say:</p> <ul style="list-style-type: none"> • Please recap what we did today. • Did we achieve our objectives?
Debrief
<p>Which of the games did you enjoy playing the most? What about this game is fun for you?</p>

<p>Reflection (Confirm, Tweak, Aha!)</p> <ol style="list-style-type: none"> 1. Ask students to think about what they did today in math. 2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation) 3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak) 4. Ask them to comment on something (if anything) they have learned today that was brand new to them.
