largest	largest	largest
largest	largest	largest
largest	largest	largest

Place Value

Directions:

1. Please cut the number cards apart.
2. Please cut the smallest and largest cards apart.
3. Place the number cards in one pile, face down, and the smallest-largest cards in a second pile face down.
4. Draw 3 number cards. Make a three digit number. For example, 276
5. Now draw a smallest-largest card. Look at the number you made. If you draw a "smallest" card, ask yourself, "Is this the smallest number I can make with these three cards?" In the example, the answer is "No", so you would need to rearrange your cards so the number reads 267. If you drew the "largest" card, ask yourself, "Is this the largest number I can make with these three cards?" In the example, the answer is "No", so you would need to rearrange your cards so the number reads 762.
6. Keep going until you have used all of the number cards.
