Grade Level:	3 rd Grade
Lesson Title:	Double Draw
Focus:	Division

Materials:	
White boards	Vocabulary Notebooks
Crayolas	dice (6-sided and 12-sided for each pair)
Socks	deck of cards for every pair of students

Opening
State the objective
Today we are going to practice using our math vocabulary and practice in the basic operations of addition, subtraction, multiplication, and division.
Gain prior knowledge by asking students the following questions
Math is about intentionally thinking of the relationships between numbers, operations, and the words we use to describe those things. What are some strategies that you use when you are trying to figure out how to solve a mathematics problem?
How can you tell that you are on the right track for solving the problem?
What are the basic operations that you need to utilize during math?

Content (the "Meat")	
Problem of the Day	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking.</p> <p>Take advantage of any teachable moments.</p> <p>Stop the class and focus on a student's key learning or understanding. <p>The school is having a candy sale. Martin sold 3 times as many candy bars as Jorge. Larry sold twice as many candy bars as Martin. Jorge sold 7 candy bars. How many candy bars did the boys sell altogether? Explain your answer.</p>	
Fact Practice Fact Family	
<p>A Fact Family is 3 numbers which have a relationship in addition and subtraction. For example, the number 9, 4, and 13 have a particular relationship in math. This family has four members:</p> <p style="margin-left: 40px;"> $9 + 4 = 13$ $4 + 9 = 13$ $13 - 9 = 4$ $13 - 4 = 9$ </p> <p>Students should roll 2 dice and create a Fact Family by writing the members of the family on the white board. Student should roll a total of 5 times, creating 5 Fact Families.</p>

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

Three Whats

Ask the following three what questions:

What was your key learning for the day?

What opportunities might you have to do this same thing in the "real world"?

What advice would you give to a "new" student getting ready to do this activity?

Reflection (Confirm, Tweak, Aha!)

- Ask students to think about what they did today in math.
- Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
- Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
- Ask them to comment on something (if anything) they have learned today that was brand new to them.

Write one multiplication and one division fact to illustrate the picture below:	
<pre> X X X X X X X X X X X X X X X X X X </pre>	
Fact Practice	
Target <ol style="list-style-type: none"> 1. Divide students into trios. 2. Each trio needs a deck of cards without face cards and jokers. 3. Place the cards face up in a TicTac Toe Grid. 4. Turn up a 10th card which will be to the side and becomes the target number (aces count as 1) 5. Each player makes an equation with some or all of the numbers in the grid to equal the target number. Students may add or subtract. 6. Each card may be used only one time in the equation. 7. As the cards are being picked up, the player must say the equation aloud—for example if the target card is 10, then I could say $6 + 4 = 10$, and pick up the 6 and the 4. 	

Consult 4 Kids Lesson Plans

8. After one player finishes his/her turn, then the cards taken are replaced by cards from the remaining deck.
9. Player with the most cards at the end of the game win.

Math Vocabulary

Word for today: factor / product

Description: The two terms, factor and product, refer to what you call the numbers in a multiplication problem. The factors are the two numbers that you would multiply together and the product is the answer. For example in the problem $6 \times 7 = 42$, the factors are 6 and 7, the product is 42. Identify the factors and the products in each of the problems below:

$$4 \times 9 = 36$$

$$7 \times 8 = 56$$

$$9 \times 2 = 18$$

$$7 \times 9 = 63$$

Students should complete the Vocabulary Notebook for the two connected terms: factor and product

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">factor / product</p>	<p>My Description</p> <p style="text-align: center;">the factor are what you multiply, the product is the answer</p>
<p>Personal Connection</p> <p>When you multiply 3×4 (the factors), you get a product of 12.</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation)

Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book

Activity Target

Materials: Target Board, pair of dice for each team (can use 6 sided or 9 sided dice)

Directions:

1. Program leader places a number in each color of the target (should be a number that represents a "fact" that you are reinforcing).
2. Player selects the color on the target that he/she is going for.
3. Player rolls 1 or 2 dice. The total of the one or two dice becomes the multiplier.
4. Player then multiplies the "target number" x's the multiplier. Writes the product on his/her tally paper.
5. Play continues.
6. When play returns to the first player, step 3 is repeated. The product is added to the original product.
7. Winner is the first player to reach or go over 1,000.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center

State the objective

Today we are going to practice using our math vocabulary and practice in the basic operations of addition, subtraction, multiplication, and division.

Gain prior knowledge by asking students the following questions

Math is about intentionally thinking of the relationships between numbers, operations, and the words we use to describe those things. What are some strategies that you use when you are trying to figure out how to solve a mathematics problem?

How can you tell that you are on the right track for solving the problem?

What are the basic operations that you need to utilize during math?

Content (the "Meat")

Problem of the Day

George says that the rule for the table below is to multiply by 6. Is he right? Explain your answer.

In	4	5	6	7	8
Out	24	30	36	42	48

Fact Practice

Draw!

1. Divide students into pairs and give each pair a deck of cards
2. Remove the face cards and jokers from the deck of cards.
3. Shuffle the deck.
4. Decide who will go first.
5. First player draws two cards.
6. Student adds or subtracts the cards.
7. Student writes his/her problem on the white board, writing a complete number sentence.
8. Students take turns drawing cards and creating problems.

***Activity → Teachable Moment(s) throughout**

During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

Engage students in a "teach to learn", have the student become the teacher.

Consult 4 Kids Lesson Plans

Math Vocabulary

Word for Today: divisor

Description: The term “divisor” refers to the number you divide by. For example, a dividend ÷ divisor = quotient. $12 \div 3 = 4$. In this case the divisor is 3. (The 12 is the dividend and the quotient is 4).

Have students look at the problems below and identify the divisor in each:

- $9 \div 3 = 3$
- $16 \div 4 = 4$
- $49 \div 7 = 7$
- $32 \div 8 = 4$

Have student complete his/her Vocabulary Notebook for the term “divisor”.

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">divisor</p>	<p>My Description</p> <p style="text-align: center;">the number you divide by</p>
<p>Personal Connection</p> <p style="text-align: center;">In the problem $30 \div 6$, the divisor is 6.</p>	<p>Drawing</p> <p style="text-align: center; color: red; font-size: 1.2em;">$30 \div 6 = 5$</p>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

Activity Tic Tac 15

Materials: Deck of Cards (remove 10s, face cards and jokers), White boards, Vis-à-vis pens or crayolas

Directions:

1. Group students in pairs.
2. Remove one ace, 2, 3, 4, 5, 6, 7, 8, and 9 from the deck.
3. Place all other cards back in the box and spread the cards out in front of the players face down.
4. Create a 3 x 3 grid on the white board or other paper.
5. Player one draws a card and places it in any space in the grid.
6. Player two draws a card and places it in a square.
7. Players continue placing cards until the sum of three numbers in a vertical, horizontal or diagonal row equals 15. The player who puts down the winning cards say, “Tic Tac 15.” If no players reach 15, a new game is begun.
8. Players should have a 5 or 10 game tournament. Keep track of wins to decide who is the Tic Tac 15 champ.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

Three Whats

Ask the following three what questions:

What was your key learning for the day?

What opportunities might you have to do this same thing in the "real world"?

What advice would you give to a "new" student getting ready to do this activity?

Reflection (Confirm, Tweak, Aha!)

- Ask students to think about what they did today in math.
- Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
- Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
- Ask them to comment on something (if anything) they have learned today that was brand new to them. (Aha!)

Math is about intentionally thinking of the relationships between numbers, operations, and the words we use to describe those things. What are some strategies that you use when you are trying to figure out how to solve a mathematics problem?

How can you tell that you are on the right track for solving the problem?

What are the basic operations that you need to utilize during math?

.Content (the "Meat")

Problem of the Day

If there are two mystery numbers that total 138. If one of the numbers is 32 more than the second number, what are the two numbers? How do you know? Note for leader: $[a + (a + 32)] = 138$.

Fact Practice

Spokes on a Wheel

1. Divide students into pairs.
2. On a white board, student draws a small circle with 9 spokes coming out of it (should look like a bicycle tire).
3. Have students choose to put a 6, 7 or 8 in the center circle.
4. Student rolls two dice and adds the pips (dots).
5. Taking this total, student writes a math problem on one of the spokes (eg. 7 is in the circle and students rolls a 3 and 5 which totals 8. The spoke equation would look like $7 + 8 = 15$).
6. Process continues until all spokes have an equation.

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn"

Math Vocabulary

Word for Today: equation

Description: In math the word equation refers to a number sentence that will express a relationship between the operation on one side of the = sign to the numbers on the other side of the =. For example, $7 + 5 = 12$ is an equation that lets us know that if you add 7 and 5 together it will be related to 12 in that this is the number you would get when adding. An equation finds the balance between the two sides. In a complex equation, the following might be a sample:

$$(6 \times 3) - 4 = 3^2 + 3$$

Create an entry in your Vocabulary Notebook for the term "equation".

Vocabulary Notebook Sample:

<p>New Word</p> <p style="text-align: center;">equation</p>	<p>My Description</p> <p style="text-align: center;">a number sentence with two sides being equal</p>
<p>Personal Connection</p> <p style="text-align: center;">I can write an equation: $3 + 4 = 7$</p>	<p>Drawing</p> <div style="text-align: center;">  </div>

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity Which Sign Is It? #1

Materials: Which Sign Is It game board, pencils. (If you would like to use the game board more than one, place in a sheet protector or laminate.)

Directions:

1. Group students in pairs.
1. As a pair, students write a + of – sign in each box to complete the equations. Play continues until both have completed the game board.
2. Players calculate the difference between his/her number and the target number. Students add the difference and player with small different, wins.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Component:	Math
Grade Level:	3 rd Grade
Lesson Title:	Which Sign Is It ?
Focus:	Addition and Subtraction

Materials:	
White boards	Decks of cards
Crayolas	Vocabulary Notebooks
Socks	Which Sign Is It #2 at end of the lesson plan

Opening
State the objective
Today we are going to practice using our math vocabulary and practice in the basic operations of addition, subtraction, multiplication, and division.
Gain prior knowledge by asking students the following questions
Math is about intentionally thinking of the relationships between numbers, operations, and the words we use to describe those things. What are some strategies that you use when you are trying to figure out how to solve a mathematics problem?
How can you tell that you are on the right track for solving the problem?
What are the basic operations that you need to utilize during math?

Content (the "Meat")	
Problem of the Day	<p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking. Take advantage of any teachable moments. Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking. When possible, engage students in a "teach to learn" opportunity and have the</p>
<p>What is the missing number in the equation below:</p> $\square \quad 63 - \quad = 27$	
Fact Practice	
<p>Foreheader</p> <ol style="list-style-type: none"> 1. Divide students into trios. Give each trio a deck of cards without face cards and jokers. 2. Shuffle the deck and give all of the cards to the referee who will be "judging" the contest. 3. On go, players are each handed a card by the referee and WITHOUT looking, put the card face out on his/her forehead. 4. The referee adds the two numbers together and states the answer. 5. Each player looks at the other person's exposed number and names his/her own number 6. Person who wins (accuracy and time), collects both cards. 7. Play continues until all cards are gone. 8. Players can repeat play (if there is another time) with each other so each has an opportunity to be both a player and referee.

<p style="text-align: center;">Math Vocabulary</p> <p>Word for today: equation</p> <p>Description: In math the word equation refers to a number sentence that will express a relationship between the operation on one side of the = sign to the numbers on the other side of the =. For example, $7 + 5 = 12$ is an equation that lets us know that if you add 7 and 5 together it will be related to 12 in that this is the number you would get when adding. An equation finds the balance between the two sides. In a complex equation, the following might be a sample: $(6 \times 3) - 4 = 3^2 + 3$</p> <p>Have students create at least 5 equations that are more challenging the $3 + 5 = 8$</p> <p>Review the entry in your Vocabulary Notebook for the term equation with a peer. Edit if necessary.</p> <p>Vocabulary Notebook Sample:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 35%; padding: 5px; vertical-align: top;"> <p style="text-align: center;">New Word</p> <p style="text-align: center;">equation</p> </td> <td style="width: 65%; padding: 5px; vertical-align: top;"> <p style="text-align: center;">My Description</p> <p style="text-align: center;">a number sentence, both sides equal the same thing</p> </td> </tr> <tr> <td style="padding: 5px; vertical-align: top;"> <p style="text-align: center;">Personal Connection</p> <p>I have 3 dolls. My friend has 2 dolls. Together we have 5 dolls. This can be written into an equation: $3 + 2 = 5$</p> </td> <td style="padding: 5px; vertical-align: top;"> <p style="text-align: center;">Drawing</p> <div style="text-align: center;"> </div> </td> </tr> </table>	<p style="text-align: center;">New Word</p> <p style="text-align: center;">equation</p>	<p style="text-align: center;">My Description</p> <p style="text-align: center;">a number sentence, both sides equal the same thing</p>	<p style="text-align: center;">Personal Connection</p> <p>I have 3 dolls. My friend has 2 dolls. Together we have 5 dolls. This can be written into an equation: $3 + 2 = 5$</p>	<p style="text-align: center;">Drawing</p> <div style="text-align: center;"> </div>	<p>student become the teacher.</p> <p>It is important to review academic math vocabulary often throughout the day.</p> <p>Complete the Vocabulary notebook for each word.</p> <p>When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).</p> <p>Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.</p>
<p style="text-align: center;">New Word</p> <p style="text-align: center;">equation</p>	<p style="text-align: center;">My Description</p> <p style="text-align: center;">a number sentence, both sides equal the same thing</p>				
<p style="text-align: center;">Personal Connection</p> <p>I have 3 dolls. My friend has 2 dolls. Together we have 5 dolls. This can be written into an equation: $3 + 2 = 5$</p>	<p style="text-align: center;">Drawing</p> <div style="text-align: center;"> </div>				
<p style="text-align: center;">Activity Which Sign Is It? #2</p> <p>Materials: Which Sign Is It game board, pencils (You can place the sheet in a sheet protector for reuse or laminate it.)</p> <p>Directions:</p> <ol style="list-style-type: none"> 1. Group students in pairs 1. As a pair, students write a + of – sign in each box to complete the equations. Shuffle cards and deal 8 cards to each player 2. Player 1 selects one of his/her eight cards and writes the value of the card in the box he/she believes will help him/her get close to the target number on the left 3. After completing play, Player 1 draws a card and play passes to the second player 4. Play continues until both have completed the game board 5. Players calculate the difference between his/her number and the target number. Students add the difference and player with small different, wins 	<p>Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.</p>

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

Three Whats

Ask the following three what questions:

What was your key learning for the day?

What opportunities might you have to do this same thing in the "real world"?

What advice would you give to a "new" student getting ready to do this activity.

Reflection (Confirm, Tweak, Aha!)

- Ask students to think about what they did today in math.
- Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
- Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
- Ask them to comment on something (if anything) they have learned today that was brand new to them.

Component:	Math
Grade Level:	3 rd Grade
Lesson Title:	Student Activity Choice
Focus:	Review

Materials:

Game Boards and materials from this week.

Prizes (these can be time, a leadership role, opportunities to be the "teacher")

Opening

State the objective

Today we are going to have fun playing a game. Students will be able to choose from the games learned in the past two weeks.

Content (the "Meat")

Activity

Today students will select the game from the week that they most want to play. Pairs can select different games. Game choices are:

- **Double Draw**
- **Tic Tac 15**
- **Target**
- **Multiples**
- **Which Sign Is It?**
