| Crayolas | Decks of cards |
| Socks | |

| Opening |
|---|
| State the objective |
| Today we are going to practice using our math vocabulary and skills in working with fractions. |
| Gain prior knowledge by asking students the following questions |
| Geometry allows us to study shapes. There is plane geometry that has to do with flat shapes like lines, circles, and squares that you can draw on a piece of paper. There is solid geometry that has to do with prisms, cubes, and pyramids. In what ways is geometry useful in your day-to-day life? |
| Today we are going to use grid paper in our activity. Have you ever worked with grid paper? What do you know about determining coordinates on a grid? |
| What are some strategies that you use when you are trying to figure out how to solve a mathematics problem? |
| How can you tell that you are on the right track for solving the problem? |

| Content (the "Meat") | |
|--|--|
| Problem of the Day | <p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking.</p> <p>Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.</p> <p>When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.</p> |
| <p>Jill's yard is 40 feet by 35 feet. If she purchases sod at \$5.00 per square feet, how much will the new lawn cost her?</p> | |
| Fact Practice Multiples | |
| <p>Multiplication facts are learned by recognizing the multiples of any given number. In this practice you will be determining the multiples of randomly generated numbers. You will need a chart and crayolas (150 chart).</p> <ol style="list-style-type: none"> 1. Roll one or two dice (if you roll two add the numbers together to determine the factor in the fact practice). 2. Mark all multiples of the number and then pass off to the next person. 3. Player may mark the same number. | |

Consult 4 Kids Lesson Plans

Math Vocabulary

Word for Today: volume

Description: The term volume refers to the space inside a three-dimensional shape. It is found by multiplying together height x length x width.

Create an entry in your Vocabulary Notebook for the word "volume".

Vocabulary Notebook Sample:

| | |
|--|---|
| <p>New Word</p> <p style="text-align: center;">volume</p> | <p>My Description</p> <p style="text-align: center;">the amount of space in a three dimensional object</p> |
| <p>Personal Connection</p> <p style="text-align: center;">What is the volume of that box?</p> | <p>Drawing</p> <div style="text-align: center;"> </div> |

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Battle Ship

This activity was worked on yesterday. Ask students what they learned about playing the game that is helpful. Have students share strategies. Ask students to work in a different pairing today.

Battle Ship

Graphing coordinates is an important learning for students. In this activity, students will determine where to place battleships by rolling dice to identify the coordinates.

Battle Ship

Directions:

1. Divide students into pairs. Give each player a set of 4 dice and a piece of grid paper.
2. Player rolls 2, 3 or 4 dice to determine the coordinates of each battleship and marks the point on the graph. For example, if the player rolls 4 dice and by adding 3 of them together comes up with 11, and the 4th die is a 3, he/she could mark the battleship at 3-11.
3. Player repeats step 1 until he/she has 5 battleships in play.
4. When both players have their boards marked, the game is ready to continue.
5. Players take turns guessing the location of the battleship. If the player misses, his/her opponent says "MISS", if the coordinate guessed is correct, then the player says "HIT". Guesses must be made stating the x axis and then the y axis.
6. Winner is the player that sinks all of the opponent's battleships.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Closing

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

Three Whats

Ask the following three what questions:

What was your key learning for the day?

What opportunities might you have to do this same thing in the "real world"?

What advice would you give to a "new" student getting ready to do this activity?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them. (Aha!)

Math Vocabulary

Word for today: equilateral triangle

Description: A triangle is a three sided figure. It has three angles (points at which the lines forming the triangle meet.) These angles will add up to 180° in ALL triangles. In an equilateral triangle, each angle is equal, so each angle equals 60° . An equilateral triangle is usually the first picture of a triangle that we have. They look like this:

Create an entry in your notebook for the term: equilateral triangle.

Vocabulary Notebook Sample:

| | |
|---|--|
| <p>New Word</p> <p style="text-align: center;">equilateral triangle</p> | <p>My Description</p> <p style="text-align: center;">all the sides and angles are equal</p> |
| <p>Personal Connection</p> <p style="text-align: center;">The musical instrument is an equilateral triangle.</p> | <p>Drawing</p> <div style="text-align: center;"> </div> |

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity Attributes

This game was played yesterday. Ask students what they learned about playing the game that is helpful. Have students share strategies. Ask students to play in a trio that they did not play in yesterday.

Attributes

Directions:

1. Divide students into trios.
2. Give each trio a deck of Attribute Cards.
3. Shuffle the cards and deal them one at a time to each player, face up.
4. When one of the player sees 3 cards with a common attribute (even if the cards are in someone else's hand, the player calls, "Trio" and then names the common characteristic and picks up the three cards.
5. Play continues, dealing the cards one at a time, until all cards have been dealt and been picked up.
6. Player with the most cards wins.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Math Vocabulary

Word for Today: acute angle

Description: An angle is created when two line segments come together in a point. An angle is measured in degrees. For example, a right angle looks like the capital letter L. There are 90° in a right angle. The lines are perpendicular to one another. The word “acute” describes an angle that is less than 90°. Instead of being perpendicular, the lines are closer together. An acute angle looks something like this: \angle

Create an entry in your Vocabulary Notebook for the word probable.

Vocabulary Notebook Sample:

| | |
|---|--|
| <p>New Word</p> <p style="text-align: center;">acute angle</p> | <p>My Description</p> <p style="text-align: center;">an angle less than 90 degrees</p> |
| <p>Personal Connection</p> <p>The greater than sign is an acute angle.</p> | <p>Drawing</p> <div style="text-align: center;">  </div> |

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

Activity Attributes

An attribute is a characteristic or a trait. An attribute could be color, stripes, solids, spots, shapes, edges, corners and any other characteristic that identifies something. When we categorize something we look for shared characteristics or attributes.

The purpose of this activity is to determine what attributes can categorize objects—in other words, what attributes do the objects have in common.

Attributes

Directions:

1. Divide students into trios.
2. Give each trio a deck of Attribute Cards.
3. Shuffle the cards and deal them one at a time to each player, face up.
4. When one of the player sees 3 cards with a common attribute (even if the cards are in someone else's hand, the player calls, “Trio” and then names the common characteristic and picks up the three cards.
5. Play continues, dealing the cards one at a time, until all cards have been dealt and been picked up.
6. Player with the most cards wins.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is” center.

State the objective

Today we are going to practice using our math vocabulary and skills with fractions.

Gain prior knowledge by asking students the following questions

Geometric shapes come in all shapes and sizes. Name some of the more common shapes? There are two dimensional or flat shapes, and then there are three dimensional or shapes that have volume. For example, a triangle is a three-sided shape and a pyramid is a three dimensional shape that begins with a triangle? What other 3-dimensional shapes do you know?

What are some strategies that you use when you are trying to figure out how to solve a mathematics problem?

How can you tell that you are on the right track for solving the problem?

Content (the "Meat")

Problem of the Day

Lorna is purchasing bags of oranges. She has decided that she needs 9 bags. Each bag weighs 2.4 pounds. How much do the bags weight together? How do you know?

Fact Practice

Multiplication Ladder

1. Give each student a white board (include marker or crayola).
2. Student should draw a ladder like the one below.

3. Have student roll 2 dice, total the pips and then multiply that number times each of the numbers in the ladder, writing the total to the right of the number.

*Activity → Teachable Moment(s) *throughout*

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

Math Vocabulary

Word for today: obtuse angle

Description: an angle is created when two lines come together to create a point. If three angles are included in one shape, you have a triangle. In a triangle if you added the measurement of each angle, you would have 180° . An obtuse angle is an angle that has more than 90° . A right angle, which is shaped like an L, has 90° in it. An obtuse angle has more than 90° , and less than 180° . An obtuse angle looks like this:

Vocabulary Notebook Sample:

| | |
|---|---|
| <p>New Word</p> <p style="text-align: center;">obtuse angle</p> | <p>My Description</p> <p style="text-align: center;">more than a 90 degree angle</p> |
| <p>Personal Connection</p> <p style="text-align: center;">When I opened the door as wide as I could it formed an obtuse angle.</p> | <p>Drawing</p> <div style="text-align: center;"> </div> |

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity

What's In A Shape?

This activity was worked on yesterday. Ask students what they learned about playing the game that is helpful. Have students share strategies. Ask students to work in a different pairing today.

What's In A Shape?

Directions:

1. Divide students into pairs.
2. Give each pair a set of 6 shapes.
3. Have students cut the shape apart.
4. Give each pair a directions sheet.
5. Follow the directions and complete each challenge.

Focus on having young people "compete" in pairs or small groups. Once a game is mastered you can utilize it in the "When Homework Is Complete" center.

Review

Say:

- Please recap what we did today.
- Did we achieve our objectives?

Debrief

Three Whats

Ask the following three what questions:

What was your key learning for the day?

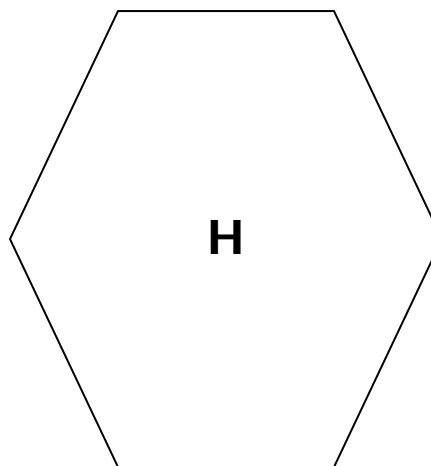

What opportunities might you have to do this same thing in the "real world"?

What advice would you give to a "new" student getting ready to do this activity?

Reflection (Confirm, Tweak, Aha!)

1. Ask students to think about what they did today in math.
2. Ask them to comment on what they did today was something they already knew how to do. (Confirmation)
3. Ask them to comment on what they did today that was like something they had done before except in one particular way which was new to them. (Tweak)
4. Ask them to comment on something (if anything) they have learned today that was brand new to them. (Aha!)

What's In A Shape Lesson 3 4th-5th Grade

Study the different shapes that you have been given and cut out. You have an Equilateral Triangle (E), Diamond (D), Square (S), Rhombus (R), Hexagon (H), and Trapezoid (T).

These shapes have a relationship with one another and this is an exercise in which you will explore that relationship.

Solve the following pattern block equations. Write the letter the shape the equation makes in the blank.

$$3 \times E = \underline{\hspace{2cm}} \qquad 3 \times R = \underline{\hspace{2cm}}$$

$$R + E = \underline{\hspace{2cm}} \qquad 2 \times 1 = \underline{\hspace{2cm}}$$

If the perimeter of the Equilateral Triangle (E) is 3 units, what is the perimeter of

R _____ T _____ H _____

If the area of the Equilateral Triangle (E) is 1 square unit, what is the area of

R _____ T _____ H _____

Draw the following shapes by following the directions:

Use two different paper pattern: Make a shape with a perimeter of 8 units and an area of 8 square units.

Use three paper patterns. Make a shape with a perimeter of 7 units and an area of 5 square units.

Use five paper patterns. Make a shape with a perimeter of 6 units and an area of 6 square units.

Use three different paper patterns to make a shape with a perimeter of 11 and an area of 11 square units.

Just for fun, use the paper patterns to make a totally unique shape. Figure out the perimeter and the area.

Math Vocabulary

Word for Today: translation (slide)

Description: Translating or sliding a geometric shape occurs when a shape is moved or slid new a new location without rotating it or flipping the shape. Here is an example:

Create an entry of the word “translation” in the vocabulary notebook.

Vocabulary Notebook Sample:

| | |
|--|--|
| <p>New Word</p> <p style="text-align: center;">translation</p> | <p>My Description</p> <p style="text-align: center;">To slide a shape from one place to another—same distance, same direction</p> |
| <p>Personal Connection</p> <p style="text-align: center;">I will translate that picture to a new place on the page.</p> | <p>Drawing</p> <div style="text-align: center;"> </div> |

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation).

Vocabulary Notebooks can be made from ½ of a composition book.

Activity

Forward Ho!

This activity was worked on yesterday. Ask students what they learned about playing the game that is helpful. Have students share strategies. Ask students to work in a different pairing today.

Forward Ho!

Basic shapes, squares, diamonds and triangles can be made by combining Tangram pieces. Working on this activity will strengthen students’ understanding of spatial and geometric relationships.

Forward Ho!

Directions:

1. Divide students into pairs or trios.
2. Give each group a game board, a deck of cards with only aces, 2s, 3s, 4s, and 5s, a game token, and one set of Tangram pieces for each student.
3. Player draws a card and moves that many spaces on the game board. When he/she arrives at the space, he/she will see a shape.
4. He/she will now make the shape on the space with the number of Tangram pieces that is indicated by the card drawn. **For example:** player one draws a 2 and moves to a square that has a diamond. He/she must then make a diamond using 2 Tangram pieces.
5. If player can make the shape with the required number of pieces, he/she can stay on the space, if he/she can’t, then he/she must go back to where he/she was.
6. Winner is the first person to reach the finish line.
7. **Note:** more than one player can be on a space at the same time.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

| Socks | Materials attached to the lesson plan—grid paper, shapes |

Opening

State the objective

Today we are going to practice using our math vocabulary and skills in working with geometry.

Gain prior knowledge by asking students the following questions

Geometry allows us to study shapes. There is plane geometry that has to do with flat shapes like lines, circles, and squares that you can draw on a piece of paper. There is solid geometry that has to do with prisms, cubes, and pyramids. In what ways is geometry useful in your day-to-day life?

What are some strategies that you use when you are trying to figure out how to solve a mathematics problem?

How can you tell that you are on the right track for solving the problem?

Content (the "Meat")

Problem of the Day

Look at the following shapes. How many lines of symmetry do each of these shapes have? Is there a pattern? If yes, what is it?

Fact Practice Draw!

1. Divide students into pairs and give each pair a deck of cards.
2. Remove the face cards and jokers from the deck of cards.
3. Shuffle the deck.
4. Decide who will go first.
5. First player draws two cards.
6. Student multiplies the cards.
7. Student writes his/her problem on the white board, writing a complete number sentence.

***Activity → Teachable Moment(s) throughout**

During the lesson check in with students repeatedly.

Check in about what is happening and what they are thinking.

Take advantage of any teachable moments.

Stop the class and focus on a student's key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.

When possible, engage students in a "teach to learn" opportunity and have the student become the teacher.

Consult 4 Kids Lesson Plans

8. Students take turns drawing and creating problems.

Math Vocabulary

Word for Today: reflection (flip)

Description: Reflections are everywhere. We have all seen pictures of a mountain that is reflected in a lake. When things are reflected it is like they are flipped. For example, when you look at the mountain, that top of the mountain is pointing skyward. In the reflection in the lake, the mountain appears to be flipped and the top of the mountain is pointing down. Flips can happen top to bottom, like with the mountain, or left to right like in the picture below.

Have students complete his/her Vocabulary Notebook.

Vocabulary Notebook Sample:

| | |
|---|--|
| <p>New Word</p> <p style="text-align: center;">reflection</p> | <p>My Description</p> <p style="text-align: center;">A reflection is like flipping something over—the top becomes the bottom</p> |
| <p>Personal Connection</p> <p style="text-align: center;">I can see my reflection in the mirror.</p> | <p>Drawing</p> <div style="text-align: center;">  </div> |

It is important to review academic math vocabulary often throughout the day. Complete the Vocabulary notebook for each word. When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation). Vocabulary Notebooks can be made from 1/2 of a composition book.

Activity

Flip, Slide and Turn

It is possible to move a geometric figure in three ways:
 You can flip a figure over a line. When you do this it is called a **reflection**.
 You can slide a figure along straight lines and this is called a **translation**.
 You can turn a figure around a point and this is called a **rotation**.

Flip, Slide, and Turn

Directions:

1. Divide students into pairs.
2. Give each pair two pieces of graph paper and a set of four shapes.
3. Write the four questions on the board and make a copy for each pair.
4. Pair of students Cut out each of the shapes and then follows the directions with each piece—tracing the shape on the graph paper before the direction and then after following the direction, labeling the picture so you know if they flipped, slid, or turned the piece.
5. Pair should create a design on the second piece of graph paper, using flips, slides, and

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Flip, Slide and Turn Lesson 7 4th-5th

You can slide a figure along straight lines. Another word for slide is translation.

You can turn the figure around a point. Another word of turn is rotation.

You can flip the figure over a line. Another word for flip is reflection.

When you slide, turn, or flip a figure, does its size change? Does its shape change? The original figure and the final figure are the same.

Select one of the shapes below and trace it on grid paper. Then demonstrate how you can slide, flip, or turn the design.

|--|
| State the objective |
| Today we are going to practice using our math vocabulary and skills with geometry. |
| Gain prior knowledge by asking students the following questions |
| <p>Geometry allows us to study shapes. There is plane geometry that has to do with flat shapes like lines, circles, and squares that you can draw on a piece of paper. There is solid geometry that has to do with prisms, cubes, and pyramids. In what ways is geometry useful in your day-to-day life?</p> <p>What are some strategies that you use when you are trying to figure out how to solve a mathematics problem?</p> <p>How can you tell that you are on the right track for solving the problem?</p> |

| Content (the “Meat”) | | | |
|--|--|-----|--|
| Problem of the Day | <p>*Activity → Teachable Moment(s) throughout</p> <p>During the lesson check in with students repeatedly. Check in about what is happening and what they are thinking.</p> <p>Take advantage of any teachable moments.</p> <p>Stop the class and focus on a student’s key learning or understanding. Ask open-ended questions to determine what the rest of the group is thinking.</p> <p>When possible, engage students in a “teach to learn” opportunity and have the student become the teacher.</p> | | |
| <p>Melanie is dividing 246 by 31. She thinks that the first number of her answer (the quotient) will be placed in the hundreds place. Is she correct? How do you know?</p> | | | |
| Fact Practice Spots and Dots | | | |
| <p>There is a master of Double 9 Dominos attached to this lesson plan. You will need 1 full set for each pair of students in your class. It is recommended that you duplicate on card stock and if possible, laminate for use again in the future.</p> <p>Players sit across from each other. Dominoes are between them, face (or spots) down. Each student draws a domino and writes the multiplication problem on their white board, multiplying the numbers represented by the spots Example: Domino drawn is</p> | | | |
| <table border="1" style="margin: auto; border-collapse: collapse;"> <tr> <td style="width: 40px; height: 40px; text-align: center; vertical-align: middle;">●●</td> <td style="width: 40px; height: 40px; text-align: center; vertical-align: middle;">●●●</td> </tr> </table> | ●● | ●●● | |
| ●● | ●●● | | |

Multiplication: $2 \times 3 = 6$

Math Vocabulary

Word for Today: rotation (turn)

Description: Rotation means to turn around a center. The **distance** from the center to any point on the shape stays the same. Every point makes a **circle** around the center. A rotation is not like a slide in which you just move something over. It is not like a flip when you turn something over or upside down. A rotation is turning the shape. An example could look like this:

Create an entry for the word rotation in your Vocabulary Notebook.

Vocabulary Notebook Sample:

| | |
|---|---|
| <p>New Word</p> <p style="text-align: center;">rotation</p> | <p>My Description</p> <p style="text-align: center;">Turn things around the center point</p> |
| <p>Personal Connection</p> <p style="text-align: center;">My necklace clasp continues a rotation around my neck.</p> | <p>Drawing</p> |

It is important to review academic math vocabulary often throughout the day.

Complete the Vocabulary notebook for each word.

When possible, have students experience the word (Ex. 4 students creating a right angle, multiple students acting out an equation)

Vocabulary Notebooks can be made from $\frac{1}{2}$ of a composition book.

Activity

Flip, Slide, and Turn

This activity was worked on yesterday. Ask students what they learned about playing the game that is helpful. Have students share strategies. Ask students to work in a different pairing today.

It is possible to move a geometric figure in three ways:

You can flip a figure over a line. When you do this it is called a **reflection**.

You can slide a figure along straight lines and this is called a **translation**.

You can turn a figure around a point and this is called a **rotation**.

Flip, Slide, and Turn

Directions:

1. Divide students into pairs.
2. Give each pair two pieces of graph paper and a set of four shapes.
3. Write the four questions on the board and make a copy for each pair.
4. Pair of students Cut out each of the shapes and then follows the directions with each piece—tracing the shape on the graph paper before the direction and then after following the direction, labeling the picture so you know if they flipped, slid, or turned the piece.

Focus on having young people “compete” in pairs or small groups. Once a game is mastered you can utilize it in the “When Homework Is Complete” center.

Flip, Slide and Turn Lesson 7 4th-5th

You can slide a figure along straight lines. Another word for slide is translation.

You can turn the figure around a point. Another word of turn is rotation.

You can flip the figure over a line. Another word for flip is reflection.

When you slide, turn, or flip a figure, does its size change? Does its shape change? The original figure and the final figure are the same.

Select one of the shapes below and trace it on grid paper. Then demonstrate how you can slide, flip, or turn the design.
